This is the only book that will help an intermediate PowerPoint user improve their skills to an advanced level. In doing so, they can benefit both professionally and personally. This is not a

comprehensive book that will bore you with every detail of PowerPoint, but a guide to specific actions you can take to create the ultimate presentation. The book covers the powerful formatting engine new to PowerPoint 2007, and how it can be used for applying soft shadows, reflection, and glows to make a presentation look attractive. It also covers PowerPoint's new 3D engine. The book goes into deep technical detail about the Office 2007 theme engine and how color schemes, effect schemes, and font schemes work; as well as the new PowerPoint XML file format, showing you how to edit PowerPoint files without using PowerPoint at all. The

authors walk through programming a macro and explain how to format shapes, diagrams, charts, text, tables with gradient and picture fills and different kinds of lines (e.g. a beveled compound line with a diamond arrowhead). Also covered are those all important slide show shortcuts that few people know about like -- seeing your private notes while presenting on a projector, starting the slide show from the current slide without fumbling through the user interface, and how to black out the slide show screen with one key press.

 This text will walk you through all that you

need to know to create PowerPoint presentations programmatically. You can create them to be as fancy or as mundane as you wish them to be. We cover charts, tables, text, fonts, video, master slides, reporting, and more; everything that you need to create any presentation. Many companies are making the move to use PowerPoint as a form of visual reporting rather than only for developing presentations. Examples might include preparing a proposal, providing status reports, and high-content, detailed presentations. In these cases, the text on one slide might flow onto another, the fonts are generally smaller, there may be less

white space, and the result much more resembles a structured report than it does a presentation. Automating the production of a report like this might greatly improve the quality of the result while reducing the time to produce it. This book provides step-by-step guidance for creating these presentations. Sample executable programs and code can be found at the author's website:
