Professional Development in Online Teaching and Learning in Technical Communication Chandresh Agrawal

The Fourth Industrial Revolution has disrupted businesses worldwide through the introduction of highly automated processes. This disruption has affected the way in which companies conduct business, impacting everything from managerial styles to resource allocations to necessary new skillsets. As the business world continues to change and evolve, it is imperative that business education strategies are continuously revised and updated in order to adequately prepare students who will be entering the workforce as future entrepreneurs, executives, and marketers, among other careers. The Research Anthology on Business and Technical Education in the Information Era is a vital reference source that examines the latest scholarly material on pedagogical approaches in finance, management, marketing, international business, and other fields. It also explores the implementation of curriculum development and instructional design strategies for technical education.

Highlighting a range of topics such as business process management, skill development, and educational models, this multi-volume book is ideally designed for business managers, business and technical educators, entrepreneurs, academicians, upper-level students, and researchers.

273 technical questions and answers for job interview

Technical communication instructors need professional development opportunities that will aid them in creating their online courses; in developing curricula; and in teaching in what may be a new environment. Although instructors can turn to instructional design teams for assistance in using Learning Management System and its functions, they specifically need their own first-hand, immersive learning within their pedagogical training. In other words, teachers need to learn in an online context like the environment that their students will use; such direct training helps instructors to facilitate student learning in a technologically distributed classroom. Beyond learning technological skills to facilitate a course, these teachers need to learn to use the technology effectively to keep students on track and to teach them skills and material. This collection—which includes three contributions from 2007 and 10 from 2017—focuses on the types of professional development instructors need to be successful in the online technical communication classroom. Formed as a 10-year retrospective of the field and its advances in online education professional development, the book offers instructors theoretical and practical suggestions for creating and teaching successful online courses and managing entire online technical communication programs. This book was originally published as a special issue of *Technical Communication Quarterly* (TCQ).

Art and Industry Chandresh Agrawal

Technology promises to make learning better, cheaper, faster—but rarely has it kept that promise. The allure of educational technology is easy to understand. Classroom instruction is an expensive and time-consuming process fraught with contradictory theories and frustratingly uneven results. Educators, inspired by machines' contributions to modern life, have been using technology to facilitate teaching for centuries. In *Teaching Machines*, Bill Ferster examines past attempts to automate instruction from the earliest use of the postal service for distance education to the current maelstrom surrounding Massive Open Online Courses. He tells the stories of the entrepreneurs and visionaries who, beginning in the colonial era, developed and promoted various instructional technologies. Ferster touches on a wide range of attempts to enhance the classroom experience with machines, from hornbooks, the Chautauqua movement, and correspondence courses to B. F. Skinner's teaching machine, intelligent tutoring systems, and eLearning. The famed progressive teachers, researchers, and administrators that the book highlights often overcame

substantial hurdles to implement their ideas, but not all of them succeeded in improving the quality of education. *Teaching Machines* provides invaluable new insight into our current debate over the efficacy of educational technology.
