Communication is a key component of everyday life, but what happens when an individual is faced with a communication disorder? Today, the prevalence of individuals with communication disorders has increased substantially. However, many of these ailments are poorly understood, and medical professionals often lack the training and research necessary to manage and treat these individuals. The Handbook of Research on Psychosocial Perspectives of Human Communication Disorders is a critical scholarly resource that covers needs-based issues pertaining to the assessment and management of communication disorders. It provides the latest research on the importance of early identification, as well as prevention and intervention practices to promote healthy cognitive, speech, language, motor, social, and emotional development. Featuring coverage on a broad range of topics such as speech therapy for children, behavior therapy, and communication disorders, this book is a vital reference source for clinical psychologists, audiologists, speech-language pathologists, special education teachers, occupational therapists, physiotherapists, psychiatrists, otolaryngologists, and neurologists.

A Handbook on Stuttering, Seventh Edition Routledge

Malcolm Fraser knew from personal experience what the person

who stutters is up against. His introduction to stuttering corrective procedures first came at the age of fifteen under the direction of Frederick Martin, M.D., who at that time was Superintendent of Speech Correction for the New York City schools. A few years later, he worked with J. Stanley Smith, L.L.D., a stutterer and philanthropist, who, for altruistic reasons, founded the Kingsley Clubs in Philadelphia and New York that were named after the English author, Charles Kingsley, who also stuttered. The Kingsley Clubs were small groups of adult stutterers who met one night a week to try out treatment ideas then in effect. In fact, they were actually practicing group therapy as they talked about their experiences and exchanged ideas. This exchange gave each of the members a better understanding of the problem. The founder often led the discussions at both clubs. In 1928 Malcolm Fraser joined his older brother Carlyle who founded the NAPA-Genuine Parts Company that year in Atlanta, Georgia. He became an important leader in the company and was particularly outstanding in training others for leadership roles. In 1947, with a successful career under way, he founded the Stuttering Foundation of America. In subsequent years, he added generously to the endowment so that at the present time, endowment income covers over fifty percent of the operating budget. In 1984, Malcolm Fraser received the fourth annual National Council on Communicative Disorders' Distinguished Service Award. The NCCD, a council of 32 national organizations, recognized the Foundation's efforts in "adding to stutterers', parents', clinicians', and the public's awareness and ability to deal constructively with stuttering." Special education students often learn about the characteristics of disabilities, but can lack an understanding of the relationship between diagnostic assessment and eligibility for special education services. The Special Educator's Guide to Assessment: A Comprehensive Overview by IDEA Disability Category focuses on the role that assessment plays in the diagnosis of a disability, determination of eligibility for special education services, and education of students with disabilities to provide a meaningful interconnection between assessment concepts and classroom application for teachers. Authors Tara S. Guerriero, Mary A. Houser, and Vicki A. McGinley want to ensure that future special education teachers have the preparation to provide comprehensive instruction to P-12 students through this text. While special education teachers are often not the ones conducting comprehensive evaluations, it is paramount that they understand their students' individual characteristics, and understand how assessment is used to determine diagnosis and eligibility. Framing the text around The Individuals with Disabilities Act (IDEA) provides students with concrete standards by which all disabilities are evaluated and regulated in our public educational system. Part I introduces the basic topics of assessment, ethics, and assessment types. Part II moves on to provide diagnostic and eligibility criteria according to IDEA categories that are most commonly diagnosed in an educational setting while Part III describes the criteria for IDEA categories most commonly diagnosed in a medical setting. Features like case studies and sample comprehensive evaluations help bring to life assessment and how it applies in real classrooms.

SSI-4: stuttering Severity instrument - Fourth Edition is a reliable and valid norm-referenced stuttering assessment that can be used for both clinical and search purposes. It measures stuttering severity in both children and adults in the four areas of speech behavior: (1) frequency, (2) duration, (3) physical concomitants, and (4) naturalness of the individual's speech. Frequency is expressed in percent syllables stuttered and converted to scale scores of 2-18. Duration is timed to the nearest one tenth of a second and converted to scale scores of 2-18. The four types of Physical Concomitants are and converted to scale scores of 0-20. The SSI-4 can also be used in conjunction with the stuttering prediction instruments for Young Children (SPI). SSI-4 was normed on a sample of 72 preschool-aged children, 139 school-aged children, and 60 adults. It has four components, each of which is used to assess and monitor the stuttering severity in both children and adults for clinical and research use: (1) Examiner's Manual and Picture Plates, (2) Test Record and Frequency Computation Forms, (3) Subjective stuttering Scales, and (4) Computerized Scoring of stuttering Severity (Software Version 2.0). The Computerized Scoring of the stuttering Severity (Version 2; CSSS-2.0) software is provided to facilitate the calculation of frequency and duration. The CSSS-2.0 automatically produces a record of the percentage of syllables stuttered (frequency) and the duration of the three longest stuttering events. Minimum System Requirements: IBM PC or compatible Windows 2000(SP4)/2003/XP/Vista Processor: 600 MHz Pentium III; equivalent or higher 1.45 MB hard disk space External mouse and keyboard recommended (for scoring accuracy) CD-ROM drive Complete SSI-4 (c2009) Kit Includes:

The increasing influence of digital media on all aspects of life, especially the use of Internet and smartphone, has not left even the field of healthcare practice untouched. Telerehabilitation, implying the use of telecommunications in rehabilitation activities, is being used widely in the treatment of communication and mental health disorders. The use of telerehabilitation services makes rehabilitation more feasible, fast, time-saving and cost-effective for people who face constraints in physically presenting themselves to healthcare providers due to extent of retardation, illness or commuting issues. It is thus a boon for the people who stay in remote areas and have no access to healthcare professionals in close vicinity. Therefore, research is underway on the optimal means to deliver telerehabilitation services both locally and globally and is now seen as a critical activity in healthcare.

Written so that it can be used flexibly to meet the demands of courses about stuttering, the book may be

used as a text at the undergraduate or graduate level in psychology or speech-language science.

This book examines three decades of research on behavioral inhibition (BI), addressing its underlying biological, psychological, and social markers of development and functioning. It offers a theory-to-practice overview of behavioral inhibition and explores its cognitive component as well as its relationship to shyness, anxiety, and social withdrawal. The volume traces the emergence of BI during infancy through its occurrences across childhood. In addition, the book details the biological basis of BI and explores ways in which it is amenable to environmental modeling. Its chapters explore the neural systems underlying developmental milestones, address lingering questions (e.g., limitations of studying BI in laboratory settings and debatable benefits of self-regulatory processes), and provide recommendations for future research. Key areas of coverage include: Animal models of behavioral inhibition. Social functioning and peer relationships in BI. Attention mechanisms in behavioral inhibition. BI and associative learning of fear. Behavioral inhibition and prevention of internalizing distress in early childhood. The relations between BI, cognitive control, and anxiety. Behavioral Inhibition is a must-have resource for researchers, clinicians, scientist-practitioners, and graduate students across such fields as developmental psychology, psychiatry, social work, cognitive and affective developmental neuroscience, child and school psychology,

educational psychology, and pediatrics.
