g Animal Form And Function Activity  
Animals vary in form and function.

From a sponge to a worm to a goat, an organism has a distinct body plan that limits its size and shape.

Animals' bodies are also designed

to interact with their environments, whether in the deep sea, a rainforest canopy, or the desert. Animal Form and Function | Biology II  
Animal Form and Function Review  
Animals are complex systems of cells working in a coordinated fashion to monitor changing external conditions while

maintaining a constant internal environment. To accomplish these tasks, animal cells are organized into systems that are specialized for particular functions.
