The code was originally published in progressive installments since first addressing places of public assembly in September 1947 and completed the progression in January 1955 addressing child day care centers. The 1956 revision of the code, considered to be the second edition, was a compilation of all the previous regulations and amendments and published January 1, 1956. This, the 11th edition of the Connecticut State Fire Safety Code as authorized by section §29-292 of the

Connecticut General Statutes is a continuation of the fire safety process incorporating advancements in technologies and improvements in construction materials. The purpose of this code, as designated by statute, is to provide reasonable safety from fire, smoke, and panic therefrom in all buildings and areas adjacent thereto except in private dwellings occupied by one or two families, and upon all premises. This code, is separated into four parts, with Part I being the Administrative portion; Part II the General provisions; Part III for being for work permitted on or after December 31, 2005 for new construction, renovations, or change of use, and new buildings; while Part IV is for existing buildings/occupancies existing prior to December 31, 2005. In accordance with the provisions of the statutes it is based on nationally recognized fire prevention standards authored by the National Fire Protection Association. This code is the product of much research and thought by authorities in various fields of interest working both individually and in committees to have a document to enhance the safety for all the residents

of Connecticut. To the fire marshals, deputies and inspectors, and all those who will be affected by the provisions of this code, I express my sinceretrust that a mutual understanding of the purpose of this document will result in a cooperative effort to enhance fire and life safety and reduce the loss of life and property by fire in our State.

Life Safety Code Handbook

National Fire Protection Association (NFPA) Fundamentals of Fire Protection for the Safety Professional provides safety managers with a guide for incorporating fire hazard awareness and protection into their safety management plans. Industrial fires pose one of

the greatest threats to organizations in terms of financial, human, and property losses. Understanding fire safety basics, the physics of fire, and the properties and classes of common hazards is key to designing fire safety management programs that not only protect an organization's assets but also ensure the safe evacuation of all involved. Fundamentals of Fire Protection for

the Safety Professional takes an in-depth look at fire hazards in the workplace—from the substances required to do business to the building construction itself—and provides practical fire safety principles that can be applied in any work environment. Readers will learn how to develop emergency action plans and fire prevention plans, implement effective alarm and

detection systems and fire extinguishment systems, and develop a comprehensive fire program management plan that is in compliance with Federal Emergency Management Agency, Occupational Safety and Health Administration, Environmental Protection Agency, and National Fire Protection Association standards. Each chapter includes a chapter summary and sample

problems, making this an ideal training tool in the workplace or the classroom. Answers to chapter questions and a comprehensive glossary and index are provided at the end of the book. *NFPA 101, Life Safety Code* Simon and Schuster A visual and written guide to NFPA 101 from the perspective of a designer.
