The definitive career guide for grad students, adjuncts, post-docs and anyone else eager to get tenure or turn their Ph.D. into their ideal job Each year tens of thousands of students will, after years of hard work and enormous amounts of money, earn their Ph.D. And each year only a small percentage of them will land a job that justifies and rewards their investment. For every comfortably tenured professor or well-paid former academic, there are

countless underpaid and overworked adjuncts, and many more who simply give up in frustration. Those who do make it share an important asset that separates them from the pack: they have a plan. They understand exactly what they need to do to set themselves up for success. They know what really moves the needle in academic job searches, how to avoid the all-too-common mistakes that sink so many of their peers, and how to decide when to point their Ph.D. toward other, non-academic options. Karen Kelsky has made it her mission to help readers join the select few who get the most out of their Ph.D. As a former tenured professor and department head who oversaw numerous academic job searches, she knows from experience exactly what

gets an academic applicant a job. And as the creator of the popular and widely respected advice site The Professor Is In, she has helped countless Ph.D.'s turn themselves into stronger applicants and land their dream careers. Now, for the first time ever, Karen has poured all her best advice into a single handy guide that addresses the most important issues facing any Ph.D., including: - When, where, and what to publish - Writing a foolproof grant application - Cultivating references and crafting the perfect CV -Acing the job talk and campus interview -Avoiding the adjunct trap -Making the leap to nonacademic work, when the time is right The Professor Is In addresses all of these issues, and many more.

Jack Worthing gets antsy living at his country estate. As an excuse, he spins tales of his rowdy brother Earnest living in London. When Jack rushes to the city to confront his "brother," he's free to become Earnest and live a different lifestyle. In London, his best friend, Algernon, begins to suspect Earnest is leading a double life. Earnest confesses that his real name is Jack and admits the ruse has become tricky as two women have become enchanted with the idea of marrying Earnest. On a whim, Algernon also pretends to be Earnest and encounters the two women as they meet at the estate. With two Earnests who aren't really earnest and two women in love with little more than a name, this play is a classic comedy of errors. This is

an unabridged version of Oscar Wilde's English play, first published in 1899.

Pushing Limits: From West Point to Berkeley and Beyond challenges the myth that mathematicians lead dull and ascetic lives. It recounts the unique odyssey of a noted mathematician who overcame military hurdles at West Point, Army Ranger School and the Vietnam War, and survived many civilian escapades—hitchhiking in third-world hotspots, fending off sharks in Bahamian reefs, and camping deep behind the forbidding Iron Curtain. From ultra-conservative West Point in the '60s to ultra-radical Berkeley in the '70s, and ultimately to genteel Georgia Tech in the '80s, this is the tale of an academic

career as noteworthy for its offbeat adventures as for its teaching and research accomplishments. It brings to life the struggles and risks underlying mathematical research, the unparalleled thrill of making scientific breakthroughs, and the joy of sharing those discoveries around the world. Hill's book is packed with energy, humor, and suspense, both physical and intellectual. Anyone who is curious about how one maverick mathematician thinks, who wants to relive the zanier side of the '60s and '70s, who wants an armchair journey into the third world, or who seeks an unconventional view of several of society's iconic institutions, will be drawn to this book.

This step-by-step guide begins by identifying and defining the basics of a dissertation proposal. With careful consideration, they explore proposal functions and parts, show how to build your study's chain of reasoning, and carefully review alternate study designs. Chapters are devoted to qualitative studies (sectioned into case studies, philosophical, and historical investigations); quantitative studies (sectioned into experimental, causal modeling, and meta-analysis studies), and mixed-method studies (sectioned into: sample survey, evaluation, development, and demonstration and action projects). Three extensively annotated proposals of former students provide examples of the guidance offered and illustrate common types of

studies.

This revised and retitled edition of Searching Writing includes two additional I-Search papers, one by a

teacher, and a new chapter entitled "The Larger Context," which shows how the I-Search concept can work throughout the whole curriculum in school and college. As with the first edition, The I-Search Paper is more than just a textbook; it's a new form of instructional help -- a context book -- that shows students what authority is in matters of learning and invites them to join the author and teacher in the educational movement called "Writing to Learn." To put this book in the hands of all the students in the course is not only to help them carry out an I-Search but to introduce them in a delightful way to the resources and tools of intellectual inquiry -- but one that never forgets the emotional or physical side of human activity. This is a rare textbook that treats students as

partners in learning. It shows what it is to take charge of one's own learning and suggests that this move is one that productive people keep making throughout their lives.

From amethyst to obsidian, Basic Witches author Jaya Saxena explores the multi-faceted meanings and history behind eleven popular crystals in this relatable personal essay collection. Highly prized for their beauty, crystals can take the shape of jewelry, household objects, and an array of self-care products. But it's the ideas they stand for that draw people to their raw forms.

Like astrology, tarot, and modern witchcraft, crystals help practitioners understand themselves and the wider world around them. In this collection of sharply observed essays, Jaya Saxena reflects on—and challenges—the ideas associated with eleven popular stones, including unconditional love (rose quartz), happiness and success (citrine), balance (amethyst), self-care (black tourmaline), purity (pearl), imposter syndrome (pyrite), toxic positivity (carnelian), change (opals), traditional concepts of marriage (diamonds), presentation versus identity (obsidian), and death (amber). The result is a deeply personal book with universal appeal, exploring how we assign meaning and power to crystals in order to give meaning and power to our lives.

This book describes meaning, stages and methods of writing a successful research project proposal and a thesis from the first draft proposal to the final version of the thesis. As a manual, this book follows a simple approach that beginners can use without complications and many terminologies and technical terms have been translated into Arabic. The book explains the structure of a thesis and proposal including title, abstract, introduction, literature review, materials and methods, results, discussion, biography and appendix (if there is any). These parts of the thesis are often mixed up without emphasizing the purpose of each part and often without limiting

oneself to the specific chapter.
