Black & Decker Complete Guide

A Short Course in Industrial Design covers a systematic approach and an organized system by which it is possible to go through the form design stages of a project. The book describes the step-by-step creation of a new product; the structure and form variation methods used in form design; and the appearance of a new product. It also tackles the form factors (i.e. design, production, sales and distribution, and destruction factors and factors concerning the product in use); the interdependence of the basic properties; and the evaluation of form design suggestions. A case history on the design of an apparatus for chromosome analysis is also presented. The case history shows the utilization of essential steps in creating a new product, especially the use of the structure and form variation methods. Design engineers and industrial engineers will find this book invaluable.

Esta obra desarrolla los contenidos del módulo profesional de Informática Industrial, del Ciclo Formativo de grado superior de Automatización y Robótica Industrial, perteneciente a la familia profesional de Electricidad y Electrónica. El texto se adapta al Real Decreto 1581/2011, de 4 de noviembre, por el que se establece el título de Técnico Superior en Automatización y Robótica Industrial, y se fijan sus enseñanzas mínimas. Por tanto,

está dirigida tanto a estudiantes como a profesionales de la informática industrial interesados en la instalación, la configuración, la programación y la reparación de sistemas informáticos y redes locales. El libro, estructurado en seis unidades, desarrolla los siguientes aspectos: • Montaje y configuración de un sistema informático. • Instalación y configuración del software de un sistema informático. • Instalación y configuración de redes locales. • Programación de equipos y sistemas industriales. • Configuración de páginas web industriales. • Diagnóstico de averías en sistemas y programas informáticos. En él, se analiza el montaje, la configuración, la puesta en servicio y el diagnóstico de averías de los sistemas informáticos y las redes locales, así como la programación estructurada mediante lenguajes de alto nivel y el diseño de páginas web industriales. Su objetivo principal es enseñar al usuario a identificar los elementos que intervienen en un sistema informático y en las redes locales de datos, a instalarlos correctamente y a configurarlos. Además, se lleva a cabo una introducción a la programación estructurada con lenguajes de alto nivel y al diseño de páginas web sencillas y atractivas con HTML para transmitir y presentar la información. Cada unidad comienza con una breve introducción, la lista de sus contenidos principales y la lista de los objetivos que se pretende alcanzar con ellos. A continuación, la explicación teórica se apoya en gran número de esquemas, tablas, imágenes y cuadros de información relevante. El mapa conceptual que cierra la explicación permite el repaso de lo aprendido antes de comenzar las actividades finales de comprobación y de ampliación de conocimientos. Por último, cada unidad se cierra con una útil práctica guiada relacionada con el contenido desarrollado en ella.

La Educación Técnica Profesional (ETP) ocupa un lugar relevante en la oferta formativa y los intereses vocacionales de las

personas jóvenes y adultas en Chile. Aun así, su representación en el conjunto del sistema educativo contrasta con una marcada debilidad de las políticas desarrolladas hacia este sector, lo que ha llevado a consolidar una frase de sentido común que caracteriza a este modelo formativo como el "hermano pobre" de la educación en Chile.
