Alice in Wonderland (also known as Alice's Adventures in Wonderland), from 1865, is the peculiar and imaginative tale of a girl who falls down a rabbit-hole into a bizarre world of eccentric and unusual creatures. Lewis Carroll's prominent example of the genre of "literary nonsense" has endured in popularity with its clever way of playing with logic and a narrative structure that has influence generations of fiction writing.

You bring such scandal to my house. In the domain of Bernarda Alba, a daughter who disobeys is no longer a daughter. Forced to live under their mother's tight grip as they mourn their father's death, can five sisters survive when young Adela dares for passion and freedom? Olivier Award-winner Harriet Walter (*Succession*) plays the formidable matriarch, guarding her reputation against the rising tide of her family's desires in this pitch-black drama exploring the consequences of oppressing women, in Alice Birch's radical new version of Federico Garc#a Lorca's modern masterpiece. This edition published to coincide with the world

premiere at the National Theatre, London, in November 2023.

Social competences have played a crucial role in the international search for generic, over-arching skills, key qualifications and core competences since the 1970s. By the end of 1990, social cohesion and integration had gained new momentum in this discourse because of their importance for the functioning of global market economy and industries. Moreover, the concept of social capital affects and changes the role of social competences in vocational and continuing education. This volume presents a collection of papers which reflect and describe these changes and their political, economical and

pedagogical backgrounds and implications. The topics include economisation of social competences, social competences as key qualifications for employability and entrepreneurship, social challenges in eroding welfare societies, gender and social competences, and the ideological and economical context of the social competences discourse.

First published in 1988, *Teachers as Intellectuals* encourages us to see schools as democratic spaces in which teachers and students work together to transform society. Giroux incorporates the most valuable insights of critical pedagogy into a more comprehensive and practical theory of schooling, committed to educating students in the language of critique and possibility. At the heart of his vision for schooling is the ability of the teacher to act as a transformative intellectual and to use critical pedagogy as a form of cultural politics. The book includes an introduction by Paulo Freire, a foreword

by Peter McLaren and new introduction from the author.

Over the last decade there has been a resurgence of interest in the scientific study of consciousness -- an area that has been largely ignored since the time of William James. This renaissance has primarily been stimulated by developments in PET, fMRI and other brain-scanning technology that enable scientists to pinpoint the neural correlates of conscious experience with ever-increasing accuracy. However, the study of conscious experience itself has not kept pace with these advances in third-person methodologies. If anything, the standard approaches to examining

the 'view from within' involve little more than cataloging its readily accessible components. Thus the study of lived subjective experience is still at the level of Aristotelian science. This has led many to deny that there could possibly be such a thing as a truly scientific study of conscious experience, or at least to ask: can one be objective about the subjective? Drawing on a wide range of approaches -- from phenomenology to meditation -- THE VIEW FROM WITHIN examines the possibility of a disciplined approach to the study of subjective states. The focus is on the practical issues involved.

From the primitive pine-torch to the paraffin candle, how wide an interval! between them how vast a contrast! The

means adopted by man to illuminate his home at night, stamp at once his position in the scale of civilisation. The fluid bitumen of the far East, blazing in rude vessels of baked earth; the Etruscan lamp, exquisite in form, yet ill adapted to its office; the whale, seal, or bear fat, filling the hut of the Esquimaux or Lap with odour rather than light; the huge wax candle on the glittering altar, the range of gas lamps in our streets,—all have their stories to tell. All, if they could speak (and, after their own manner, they can), might warm our hearts in telling, how they have ministered to man's comfort, love of home, toil, and devotion. Surely, among the millions of fire-worshippers and fire-users who have passed away in earlier ages, some have pondered over the

mystery of fire; perhaps some clear minds have guessed shrewdly near the truth. Think of the time man has lived in hopeless ignorance: think that only during a period which might be spanned by the life of one man, has the truth been known. Atom by atom, link by link, has the reasoning chain been forged. Some links, too quickly and too slightly made, have given way, and been replaced by better work; but now the great phenomena are known—the outline is correctly and firmly drawn—cunning artists are filling in the rest, and the child who masters these Lectures knows more of fire than Aristotle did. The candle itself is now made to light up the dark places of nature; the blowpipe and the prism are adding to our knowledge of the earth's

crust; but the torch must come first.

For almost a century, educational theory and practice have been influenced by the view of behavioural psychologists that learning is synonymous with behaviour change. In this book, the authors argue for the practical importance of an alternate view, that

learning is synonymous with a change in the meaning of experience. They develop their theory of the conceptual nature of knowledge and describe classroom-tested strategies for helping students to construct new and more powerful meanings and to integrate thinking, feeling, and acting. In their research, they have found consistently that standard educational practices that do not lead learners to grasp the meaning of tasks usually fail to give them confidence in their abilities. It is necessary to understand why and how new information is related to what one already knows. All those concerned with the improvement of education will find something of interest in *Learning How to Learn*.

Libros espa#oles Library of Alexandria

Originally published in 1986, designed for teachers and those concerned with the education of primary and secondary school pupils, *Learning Strategies* presented a new approach to 'learning to learn'. Its aim was to encourage teachers to start thinking about different approaches to harnessing the potential of young learners. It was also relevant to adult learners, and to those who teach them. Thus, although about learning, the book is also very much about teaching. *Learning Strategies* presents a critical view of the study skills courses offered in schools at the time, and assesses in non-technical language what contributions could be made to the learning debate by recent developments in cognitive psychology. The traditional curriculum concentrated on 'information' and

developing skills in reading, writing, mathematics and specialist subjects, while the more general strategies of how to learn, to solve problems, and to select appropriate methods of working, were too often neglected. Learning to learn involves strategies like planning ahead, monitoring one's performance, checking and self-testing. Strategies like these are taught in schools, but children do not learn to apply them beyond specific applications in narrowly defined tasks. The book examines the broader notion of learning strategies, and the means by which we can control and regulate our use of skills in learning. It also shows how these ideas can be translated into classroom practice. The final chapter reviews the place of learning strategies in the curriculum.

This important book looks at developments that are changing our understanding of the role of education in citizenship and the possibilities of democratic participation. The chapters cover theories of citizenship and education and the transition from the welfare state to the neoliberal state, and draw on Hobbes, Locke, Jefferson, Kant, Hegel, Marx and other writers such as C. Mouffe and C. Pateman to outline contemporary approaches to multiculturalism in education and citizenship.

CONTRIBUTIONS TO THE SOCIOLOGY OF LANGUAGE brings to students, researchers and practitioners in all of the social and language-related sciences carefully selected book-length publications dealing with sociolinguistic theory, methods, findings and applications. It approaches the study of language in society in its broadest sense, as a truly international and interdisciplinary field in which various approaches, theoretical and empirical,

supplement and complement each other. The series invites the attention of linguists, language teachers of all interests, sociologists, political scientists, anthropologists, historians etc. to the development of the sociology of language.

One bright spring morning in the woods of France, a soldier, blinded by the war, is found by a little girl named Coco, and

her older sister Marcelle. In return for their kindness, the soldier tells the sisters marvellous tales, each story connected to the keepsake he carries in his pocket: a perfect, tiny silver donkey. As the days pass and they struggle in secret to help the soldier reach home, Coco and Marcelle learn the truth behind the silver donkey, and what the precious object means: honesty, loyalty, and courage. This is a joyful and enchanting novel for all ages.
