 Thriving and Spirituality Among Youth empirically explores the connections between spirituality and positive youth development through the research of a set of scholars from the wide array of scientific fields including biology, sociology, and theology. This unique handbook shows how to foster positive development during adolescence, including youth contributions to families and communities in civil society. The material draws on research conducted with various populations including immigrant Hispanic, Chinese, Israeli, and Muslim-American youth. "Spirituality in College Students' Lives draws on data from a large-scale national survey examining the spiritual development of undergraduates and how colleges and universities can be more effective in facilitating students' spiritual growth. In this book, contributors from the fields of education, psychology, sociology, social work, and religion present research-based studies that explore the importance of students' spirituality and the impact of the college experience on their spiritual development. Offering a wide range of theoretical perspectives and worldviews, this volume also includes reflections from distinguished researchers and practitioners which highlight implications for practice. This original edited collection explores: Emerging theoretical frames and analytical approaches; differences in spiritual expressions and experiences among sub-populations; the impact of campus contexts; and how college experiences shape spiritual outcomes. Spirituality in College Students' Lives is an important resource for higher education and student affairs faculty, administrators, and practitioners interested in nurturing the inner lives of college students"--

Why do we need more questionnaires to measure aspects of spirituality/religiosity when we already have so many well-validated instruments in use? One answer is that research in this field is growing and that new research questions continuously do arise. Several of these new questions cannot be easily answered with the instruments designed for previous questions. The field is expanding and, consequently, the research topics. Meanwhile several multidimensional instruments were developed which cover existential, prosocial, religious and non-religious forms of spirituality, hope, peace and trust—and several more. The 'disadvantage' of these instruments is the fact that some are conceptually broad and often rather unspecific, but they might be suited quite well for culturally and spiritually diverse populations when the intention is to compare such diverse groups. This is the reason why more research on new instruments is needed as can be found in this Special Issue, and to stimulate a critical debate about their pros and cons.

*The Psychology of Ultimate Concerns* Springer Nature

This book provides an overview of the research on spirituality, religiousness and health, including the most important studies, conceptualization, instruments for measurement, types of studies, challenges, and criticisms. It covers essential information on the influence of spirituality and religiousness (S/R) in mental and physical health, and provides guidance for its use in clinical practice. The book discusses the clinical implications of the

research findings, including ethical issues, medical/health education, how to take a spiritual history, and challenges in addressing these issues, all based on studies showing the results of incorporating S/R in clinical practice. It contains case reports to facilitate learning, and suggests educational strategies to facilitate teaching S/R to health professionals and students. *The Psychology of Religion, Fourth Edition* Oxford University Press, USA

Paloutzian (experimental and social psychology, Westmont College) and Park (psychology, U. of Connecticut) provide a 33-chapter handbook on the psychology of religion and spirituality, for social and clinical psychologists, pastoral counselors, and students and researchers in psychology and religious studies. Psychologists and a few religious studies specialists from the US and some countries in Europe address the foundations, including definitions, core issues, measurement assessment, research methods, psychodynamic psychology and religion, and evolutionary psychology as a foundation for the psychology of religion; religious and spiritual development across the lifespan; and the neural and cognitive bases of religion and connections to emotion, personality, culture, and social behavior. They discuss religious practices and rituals, conversion experiences, prayer, spiritual struggles, fundamentalism, forgiveness, values, and morality, and implications for individual and collective well-being in terms of health, mental health, coping, psychotherapy, workplace spirituality research, terrorism, and other areas. New topics in this edition include cross-cultural issues, spiritual goals, emotional values, and mindfulness. Most chapters have been redesigned or rewritten, with 25 new and eight revised chapters. The main themes of the book are more integrated, and the introductory and concluding chapters argue that the application of religious meaning systems and the multilevel interdisciplinary paradigm can allow reconceptualization of the field and expand research. What is the relationship between women and secularization? In the West, women are abandoning traditional religion. Yet they continue to make up the majority of religious adherents. Accounting for this seeming paradox is the focus of this volume. If women undergird the foundations of religion but are leaving in large numbers, why are they leaving? Where are they going? What are they doing? And what's happening to those who remain? *Women and Religion in the West* addresses a neglected yet crucial issue within the debate on religious belonging and departure: the role of women in and out of religion and spirituality. Beginning with an analysis of the relationship between gender and secularization, the book moves its focus to in-depth examination of women's experiences based on data from key recent qualitative work on women and religion. This volume addresses not only women's place in and out of Christianity (the normal focus of secularization theories) but also alternative spiritualities and Islam, asking how questions of secularization differ between faith systems. This book offers students and scholars of religion, sociology, and women's studies, as well as interested general readers, an accessible work on the religiosity of western women and contributes fresh analyses of the rapidly

shifting terrain of contemporary religion and spirituality.

The book highlights a range of examples and case studies facilitating the practical application of the recommendations discussed. Based on information gathered from the internationally used Spiritual Needs Questionnaire, this book offers analyses of the spiritual and existential needs among different groups of people such as the chronically ill, elderly, adolescents, mothers of sick children, refugees, patients' relatives, and others. The theoretical background, specific empirical findings and the relevance of addressing spiritual needs is discussed by experts from different professions and cultural contexts. Supporting a person's spiritual needs remains an important task of future healthcare systems that wish to more comprehensively care for the healthcare needs of patients, and of religious communities to ensure that spiritual concerns of all persons, independent of their religious orientations, are met in and outside healthcare settings.

This book offers a clinical guide that brings together a broad range of brief interventions and their applications in treating psychosis. It describes two core approaches that can narrow the current, substantial gap between the need for psychotherapeutic interventions for all individuals suffering from psychosis, and the limited mental health resources available. The first approach involves utilizing the standard therapeutic modalities in the context of routine clinical interactions after adapting them into brief and effective formats. To that end, the book brings in experts on various psychotherapeutic modalities, who discuss how their particular modality could be adapted to more effectively fit into the existing system of care delivery. The second approach, addressed in detail, is to extend the availability of these brief interventions by utilizing the circle of providers as well as the social circle of the clients so that these interventions can be provided in a coordinated and complementary manner by psychiatrists, psychologists, clinical social workers, case managers, peer support specialists and other providers on the one hand, and by family members, friends, social and religious institutions on the other.
