Electrospinning: Nanofabrication and Applications presents an overview of the electrospinning technique, nanofabrication strategies and potential applications. The book begins with an introduction to the fundamentals of electrospinning, discussing fundamental principles of the

electrospinning process, controlling parameters, materials and structures. Nanofabrication strategies, including coaxial electrospinning, multi-needle electrospinning, needleless electrospinning, electro-netting, near-field electrospinning, and three-dimensional macrostructure assembling are also covered. Final sections explore the applications of electrospun nanofibers in different fields and future prospects. This is a valuable reference for engineers and materials scientist working with fibrous materials and textiles, as well as researchers in the areas of nanotechnology, electrospinning, nanofibers and textiles. Explores controllable fabrication of

electrospun nanomaterials and their multifunctional applications Explains the electrospinning technique as used in nanofabrication and nanofibers Outlines the applications of electrospun nanofibrous materials in tissue engineering, filtration, oil-water separation, water treatment, food technology, supercapacitors, sensors and so on

FOIA Update Springer

Volume C forms one volume of a Handbook about Polymer Nanocomposites. Volume C deals with Polymer nano-composites of cellulose nano-particles. The preparation, architecture, characterisation, properties and application of polymer nanocomposites are discussed within some 27 chapters. Each chapter has been authored by experts in the respective field.

The U.S. Budget in Brief Prentice Hall

Authoritative survey of the natural, modified, and synthetic water-soluble resins and gums now available commercially.

Electrospinning: Nanofabrication and Applications DIANE Publishing

Autobiography: About the artist/writer, Paula S. Smith (Ida Mae Asbury): graduated from Miami University in August, the same day as her parents celebrated their 25th Wedding Anniversary. In Lazarus' Advertising Department in Columbus, Ohio, she progressed from Assistant Production Manager to Retoucher, to Home Artist, to Fashion Artist, to a Supervisor: Layout Artist - Finish Artist. Her freelance business, Collage, began in 1977. She received a Masters in Art Education in 1984 and began teaching art from 1986 at Princeton High School in Cincinnati, Ohio, for the next 21 years. Theater arts membership from 1986 included Black Cultural Productions (television), Oxford Community Theater, Hamilton Civic Theater, and Footlighters when she danced and sang. In 1990 she returned to Oxford to live with her mother, Sarah, and returned to her home church, Bethel AME. She enjoyed drawing and singing jazz, rock and roll, country music, and writing. In 1990 (+3 more years) Paula was chosen by her students for Who's Who Among American Teachers. Honors in 2006 included National Honor Roll's Outstanding American Teachers and in 2010-11 Cambridge Who's Who recognized her as an executive, professional, and entrepreneur of that year and an honored member the next. Her business, Collage, is still functioning; the art in stock includes black and white prints, full-color watercolor prints, original drawings, paintings (acrylic and watercolor), landscapes, and Third World subject matter. Miss Smith believes that in all life and art, whether in subject matter or media, there can be joy in the "doing" and the partnership of discovery. Book synopsis: Gripe Night is the story of how my father and mother developed and implemented the fair hearing of family disputes. How these affected different family members is included within the booklet. I hope that families will enjoy this small window into the life of the author and can use this as a small piece building peace within family life.

Historically Underutilized Businesses Elsevier

This unique book helps readers understand why cognitive psychologists approach problems as they do. It explains the questions cognitive psychologists ask, gives clear answers, and provides interesting, lively and comprehensive coverage of controversies in the field. This book is a study of cognition: of how humans think. Topics covered include visual perception, attention, sensory and primary memory, memory encoding, memory retrieval, memory storage, motor control, visual imagery, decision making and deductive reasoning, problem solving, and language. For readers that

are interested in understanding the mysteries of cognition, including psychiatrists, psychologists, psychoanalysts, and those in the field of cognitive neuroscience.

Narcotics Intelligence Estimate Humana

This volume explores the latest techniques and strategies used to study the field of peptide macrocycles. The chapters in this book are organized into four parts: macrocycles synthesis, combinational library synthesis and screening, macrocycle characterization, and unique applications. Part One looks at a variety of peptide cyclization methodologies, and Part Two describes methods for the creation of peptide macrocycles libraries and their subsequent screening against biological targets of interest. Part Three discusses the study and characterization of peptide macrocycle-target interactions, and Part Four introduces unique applications for peptide macrocycles, from higher-order structure formation to post-synthetic functional modifications. Written in the highly successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Cutting-edge and comprehensive, Peptide Macrocycles: Methods and Protocols is a valuable resource for both novice and expert researchers looking to learn more about this developing field.

Protein Synthesis and Translational Control Springer

This volume gives an overview of state of the art technologies and future developments in the field of preclinical pharmaceutical research. A balanced mix of experts from academia and industry give insight in selected new developments in the drug discovery pathway. The topics cover the different parts of the drug discovery process, starting with new developments in the target identification and validation area. The lead generation part as a next step focuses on the requirements and technologies to identify new small molecules as lead compounds for further optimization; in a second section the technologies to identify biologics as leads are addressed. The final part focuses on the pharmacological models and technologies to characterize new compounds and the impact of biomarkers to facilitate the transfer of drug candidates into the development phase.

William Andrew

A princess thinks she was a bird, a coconut that cost a thousand rupees, and a shepherd with a bag of words...Kings and misers, princes and paupers, wise men and foolish boys, the funniest and oddest men and women come alive in this sparkling new collection of stories. The clever princess will only marry the man who can ask her a question she cannot answer; the orphan boy outwits his greedy uncles with a bag of ash; and an old couple in distress is saved by a magic drum. Sudha Murty's grandparents told her some of these stories when she was a child; others she heard from her friends from around the world. These delightful and timeless folktales have been her favourites for years, and she has recounted them many times over to the young people in her life. With this collection, they will be enjoyed by many more readers, of all ages. Age group of target audience is 8+.

U.S. Trade with Puerto Rico and U.S. Possessions Penguin Books India

This study describes patterns and trends of intellectual property (IP) use in Brazil, drawing on a new statistical database (BADEPI) containing all IP filings at Brazilian Instituto Nacional da Propriedade

Industrial (INPI) over the period 2000-2011. This novel database contains a unique set of information about patents, utility models, industrial designs, trademarks, geographical indications, computer programs and IP-related contracts. In addition, the study documents the methodology to construct this novel database from bibliographical unit-record data, which among others makes use of unique identification of applicants and inventors across all forms of IP.

Ballistic missile defense glossary William Andrew

Many controlled release veterinary drug delivery systems (CRVDDS) are presently in use, and recently there has been a host of new CRVDDS within veterinary medicine. The challenges of this area of drug delivery arise from the unique anatomy and physiology of the target animal, the cost constraints associated with the value of the animal being treated and the extended periods of time that delivery must be sustained for (often measured in months). The purpose of this book is to introduce the reader to the unique opportunities and challenges of the field of CRVDDS and to explain and discuss the basic controlled release principles underlying the development of CRVDDS. Its aim is to provide an overview of many of the areas where CRVDDS have application, and to highlight the opportunities and prospects for controlled release technology in the veterinary field. Controlled Release Veterinary Drug Delivery comprises chapters that provide workers in the field (and those interested in this area) with information on the design, development and assessment of a variety of CRVDDS. The book contains chapters that describe the relevant animal physiological and anatomical considerations alongside descriptions of current and emerging controlled release delivery systems for a variety of routes for drug delivery, and present overviews on the physical and chemical assessment of veterinary controlled release delivery systems. The veterinary area is abound with opportunities for the development of controlled release drug delivery technologies. It is an area of medicine that is open to the acceptance of novel drug delivery devices, and which readily encompasses the use of novel routes of administration. It is an area of many unmet needs, most of which offer opportunities and unique challenges for the innovative formulation scientist to provide solutions. This book will provide an insight into the biological, clinical and pharmaceutical challenges that face the formulation scientist in this interesting and diverse area of research.

Index of Research Results Cold Spring Harbor Perspective

Wild plants signify a vital health and economic constituent of biodiversity. In recent years, research

interest on wild plants has increased. This book contains valuable information on wild plants and their ethnopharmacological properties. It deliberates on traditional usage and ethnopharmacological properties of wild plants. It will be useful to policy makers, researchers working in the areas of biodiversity, ethnopharmacology, ethno-biology, conservation biology and biodiversity prospecting.

Tables for Statisticians and Biometricians

The synthesis of proteins by ribosomes is a fundamental cellular process. Cells must tightly control protein synthesis to maintain homeostasis and regulate proliferation, growth, differentiation, and development. Indeed, aberrant translational control is associated with cancer, several neurologic syndromes, and genetic disorders including "ribosomopathies." Written and edited by experts in the field, this collection from Cold Spring Harbor Perspectives in Biology covers our current understanding of protein synthesis and its control, from the genomic level to single- molecule analysis and single-cell imaging. The contributors describe the fundamental steps in protein synthesis (initiation, elongation, and termination), the factors involved, and high- resolution structures of the translational machinery. They review the targets of translational control (e.g., initiation factors and mRNAs) and how signaling pathways modulate this machinery. The roles of the endoplasmic reticulum, the unfolded protein response, processing bodies (P-bodies), stress granules, and small RNAs (including microRNAs) are also covered. This volume includes discussion of translational deregulation in cancer and the development of therapeutic agents that target translation initiation. Thus, it is an essential reference for cell and molecular biologists, as well as developmental and neurobiologists, oncologists, virologists, and all those investigating human diseases associated with translation dysfunction.
