The price at which a stock is traded in the market reflects the ability of the firm to generate cash flow and the risks associated with generating the expected future cash flows. The authors point to the limits of widely used valuation

techniques. The most important of these limits is the inability to forecast cash flows and to determine the appropriate discount rate. Another important limit is the inability to determine absolute value. Widely used valuation techniques such as market multiples - the price-to-earnings ratio, firm value multiples or a use of multiple ratios, for example - capture only relative value, that is, the value of a firm's stocks related to the value of comparable firms (assuming that comparable firms can be identified). The study underlines additional problems when it comes to valuing IPOs and private equity: Both are sensitive to the timing of the offer, suffer from information asymmetry, and are more subject to behavioral elements than is the case for shares of listed firms. In the

case of IPOs in particular, the authors discuss how communication strategies and media hype play an important role in the IPO valuation/pricing process.

Understanding their implications and applying them appropriately requires something special; and that is why International GAAP 2016 is the essential tool for anyone applying, auditing, interpreting, regulating, studying and teaching international financial reporting. It provides expert interpretation and practical guidance for busy professionals, and includes, in every chapter, detailed analysis of how complex financial reporting problems can be resolved appropriately and

effectively. The International Financial Reporting Group of Ernst & Young includes financial reporting specialists from throughout the world. Complex technical accounting issues are explained clearly in a practical working context that enables immediate understanding of the point at issue. International GAAP 2016 is the only globally focused work on IFRSs. It is not constrained by any individual country's legislation or financial reporting regulations, and it ensures an international consistency of approach unavailable elsewhere. It shows how difficult practical issues should be approached in the complex, global world of international financial reporting, where IFRSs have become the accepted financial reporting system in more than

100 countries. This integrated approach provides a unique level of authoritative material for anyone involved in preparing, interpreting or auditing company accounts, for regulators, academic researchers and for all students of accountancy. Ethical Obligations and Decision-Making in Accounting gives students a robust ethical framework that is crucial for accountants in the post-Enron era. Incorporating the principles of the AICPA code and other systems of ethics, Mintz and Morris show accounting students how a commitment to ethics can enable

accounting professionals to meet their ethical obligations both to investors and creditors. No other book so comprehensively examines the elements of the financial reporting system - including the ethics of the internal control environment and the effectiveness of board of director and audit committee oversight - that determine the ethical standard of the accounting process.

of the early twenty-first century. In this in-depth analytical and critical discussion of the content and system of the directive, thirty-eight contributing authors – academics, lawyers, consultants, fund supervisors, and fund industry experts – examine the AIFMD from every angle. They cover structure, regulatory history, scope, appointment and authorization of the manager, the requirements for depositaries and prime brokers, rules on delegation, reporting requirements, transitional provisions, and the objectives stipulated in the recitals and other official documents. The challenging implications and contexts they examine include the following: - connection with systemic risk and the financial crisis; - nexus with insurance for negligent conduct; -

connection with corporate governance doctrine; - risk management; - transparency; - the cross-border dimension; - liability for lost assets; - impact on alternative investment strategies, and - the nexus with the European Regulation on Long-Term Investment Funds (ELTIFR). Nine country reports, representing most of Europe's financial centres and fund markets add a national perspective to the discussion of the European regulation. These chapters deal with the potential interactions among the AIFMD and the relevant laws and regulations of Austria, France, Germany, Italy, Luxembourg, Liechtenstein, The Netherlands, Malta and the United Kingdom. The second edition of the book continues to deliver not only the much-needed discussion of

the inconsistencies and difficulties when applying the directive, but also provides guidance and potential solutions to the problems it raises. The second edition considers all new developments in the field of alternative investment funds, their managers, depositaries, and prime brokers, including, but not limited to, statements by the European Securities and Markets Authority (ESMA) and national competent authorities on the interpretation of the AIFMD, as well as new European regulation, in particular the PRIIPS Regulation, the ELTIF Regulation, the Regulation on European Venture Capital Funds (EuVeCaR), the Regulation on European Social Entrepreneurship Funds (EUSEFR), MiFID II, and UCITS V. The book will be warmly welcomed by investors and their

counsel, fund managers, depositaries, asset managers, administrators, as well as regulators and academics in the field.
