The alien spaceship landed in a cornfield. Its crew died rapidly, leaving only one survivor - a baby, conceived on an unknown world, carried in its mother's womb across space and delivered even as the mother died on a hostile Earth. But the alien woman had given birth to more than a child. With her last act she had bequeathed to the Earth that hated her and her kind decades of turmoil and strife that would

come close to tearing the whole planet apart.

Pell's equation is part of a central area of algebraic number theory that treats quadratic forms and the structure of the

rings of integers in algebraic number fields. It is an ideal topic to lead college students, as well as some talented and motivated high school students, to a better appreciation of the power of mathematical technique. Even at the specific level of quadratic diophantine equations, there are unsolved problems, and the higher degree analogues of Pell's equation, particularly beyond the third, do not appear to have been well studied. In this focused exercise book, the topic is motivated and developed through sections of exercises which will allow the readers to recreate known theory and provide a focus for their algebraic practice. There are several explorations that encourage the reader to embark on their own research. A high school background in mathematics is all

that is needed to get into this book, and teachers and others interested in mathematics who do not have (or have forgotten) a background in advanced mathematics may find that it is a suitable vehicle for keeping up an independent interest in the subject.

*Nuclear Energy* Franklin Classics Throughout human history, wars and violence have often been waged in the name of religions and in the name

of diverging religious beliefs and belonging. Ironically, though, all religions in their teachings speak of nonviolence and have in common the promotion of peace and justice, namely the respect of human life and dignity, the institution of human rights, the protection of the poor and vulnerable, the freeing of the oppressed, the active elimination of injustice? It seems therefore, that violence and wars would be antithetical to religions; yet they are so frequently used as their justification. Are we then speaking of different "religions"? "Institutional religions," the ones structured by humans and that are brandished to lead violence and wars, become in fact quite foreign to the essence of the religions as they were established by their founders and

that they intend to represent; they actually contribute to their destruction. Wanting to reflect on that point, I embarked, a few years ago, on giving voice to local religious individuals, whom I called "Religious Peacemakers," and who, each by living the essential teachings of their particular faith, contributed by their actions to peace and justice. I wanted to prove that their path, irrespective of their original religion, would be similar, and that their diverse faith, instead of separating them, would on the contrary end up uniting them.

What happened at 10 Rillington Place was so shocking and gruesome that even today everyone over a certain age

still remembers the case with a shudder. In 1950, Timothy Evans was hanged for the violent murder of his baby daughter; he was also assumed to have murdered his wife. Then, less than three years later, another tenant, John Christie, was found to have killed at least six women, hiding their bodies in the garden, under floorboards and in a concealed kitchen alcove. Christie followed Evans to the gallows. It seemed unlikely that two murderers were living at 10 Rillington Place, and the evidence that emerged in the Christie case eventually led to Evans receiving a pardon. But there was also circumstantial evidence that Evans had indeed killed his wife and child. Crime student Edna Gammon firmly believes that Evans was guilty. In *A House To Remember*, she explains why.

Legendary actress Brigitte Bardot led fashion revolutions throughout her career; this retrospective includes BB's comments on her iconic style in a rare, intimate interview. Brigitte Bardot is a style icon whose legacy has undeniably shaped the face of fashion as we know it. She was discovered by a magazine editor at only 14 years old, her career blossomed as the world emerged from the ashes of World War II. She found fame and admiration on the big screen

in the 1950s and then became the fiery sex symbol of the groovy and liberated 1960s. Over the course of her career, all of the great French designers—including Christian Dior, Pierre Balmain, and Pierre Cardin—outfitted Bardot on- and offscreen. In photographs that capture her attending receptions by Queen Elizabeth II and Charles de Gaulle or on glamorous visits to the United States, in fashion shoots and on film sets, or relaxing on a grassy field, this volume illustrates all the key looks that BB wore and brought to the international spotlight as she invented and edited her own highly imitated style. In an extensive—and extremely rare—interview, accompanied by her personal comments on the photographs, Bardot explains the context of the often

vanguard fashions she wore, making headlines wherever she went. Evoking French style and the glamour of St. Tropez, her legacy endures—from ballerina slippers with sweeping skirts to figure-hugging knitwear, gingham fabrics and gypsy dresses, kohl eyeliner and tousled hair.

The next quantum leap beyond Moneyball , this book offers powerful new insights into all human decision-making, because if sports teams are getting it wrong this badly, how do you know you're not? Sometimes the decisions that teams make are simply

inexplicable. Consider: sports teams have an immense amount of detailed, quantifiable information to draw upon, more than in virtually any other industry. They have powerful incentives for making good decisions. Everyone sees the results of their choices, and the consequences for failure are severe. And yet... they keep making the same mistakes over and over again... systematic mistakes you'd think they'd learn how to avoid. Now, two leading sports economists reveal those mistakes in basketball, baseball, football, and hockey, and explain why sports decision-makers never seem to learn their lessons. You'll learn which statistics are connected to wins, and which aren't, and which statistics can and can't predict the future. Along the way, David Berri and

Martin Schmidt show why a quarterback's place in the draft tells you nothing about how he'll perform in the NFL... why basketball decision-makers don't focus on the factors that really correlate with NBA success... why famous coaches don't deliver better results... and much more.
