In 2012, the White House put out a call to increase the number of STEM graduates by one million. Since then, hundreds of thousands of science students have started down the path toward a STEM career. Yet, of these budding scientists, more than half of all college students planning to study science or medicine leave the field

during their academic careers. This guide is the perfect personal mentor for any aspiring scientist. Like an experienced lab partner or frank advisor, the book points out the pitfalls while providing encouragement. Chapters cover the entire college experience, including choosing a major, mastering study skills, doing scientific research, finding a job, and, most

important, how to foster and keep a love of science.

A unique tool for teaching and learning the top 100 most teachable topics in internal medicine  
There are many challenges for residents when training students who are making the big "jump" from preclinical to clinical. Most notably, they need to find

time to pick and prepare topics to teach in meaningful ways without the availability of a blackboard in the learning hospital. Students also need to be able to grasp these concepts quickly and with the ability to recall them later. This teaching manual primarily focuses on physiology/pathophysiology/exam findings with the goal of providing content to make

teaching and learning on the wards easier for both attendings/senior residents and interns/medical students. It features the 100 most teachable topics (clinical pearls) in an image-based presentation and will cover all the major disciplines of internal medicine, including cardiology, gastroenterology, endocrine, and infectious disease. Each topic, or card, has an image on one side to prompt discussion

(ECG, CXR, physical exam finding, etc.), and the flip side includes teaching points organized in question and answer format. They are presented in a pocket-sized binder with removable cards so both residents and students can remove only the topics of the day or ones they need to study. Each topic area has been reviewed by a specialist at Harvard Medical School. Visual, easy-to-use

and reference tool for on-the-go. Discusses the "why" behind a teachable topic. Q&A format serves both rotation and exam prep. Case-based to practice clinical pearls and complex topics.

CreateSpace. Decades of research have demonstrated that the parent-child dyad and the environment of the family "which includes all primary caregivers" are at the

foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and

the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of

happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally,

parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of

young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that

warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States. *The Patient History: Evidence-Based Approach* McGraw Hill Professional Based upon the popular review course from Harvard Medical School, The Brigham Intensive Review of Internal Medicine is a

War, Cyril Conroy combines luck and a single canny investment to begin an enormous real estate empire, propelling his family from poverty to enormous wealth. His first order of business is to buy the Dutch House, a lavish estate in the suburbs outside of Philadelphia. Meant as a surprise for his wife, the house sets in motion the undoing of everyone he loves. The story is told by Cyril's son

Danny, as he and his older sister, the brilliantly acerbic and self-assured Maeve, are exiled from the house where they grew up by their stepmother. The two wealthy siblings are thrown back into the poverty their parents had escaped from and find that all they have to count on is one another. It is this unshakeable bond between them that both saves their lives and thwarts their

futures. Set over the course of five decades, *The Dutch House* is a dark fairy tale about two smart people who cannot overcome their past. Despite every outward sign of success, Danny and Maeve are only truly comfortable when they're together. Throughout their lives they return to the well-worn story of what they've lost with humor and rage. But when at last they're forced to confront the people

who left them behind, the relationship between an indulged brother and his ever-protective sister is finally tested.

 What does it take to match into the specialty of

your choice? This question is hotly debated and surveys of applicants and program directors find sharp divisions on the topic. In a recent survey, the authors concluded that "there are significant differences between program directors' and medical students' perceptions of which factors are important in the residency selection process" (Brandenburg 2005). In advising students over the years, we have come to realize that misperceptions abound, with applicants frequently overestimating or underestimating certain residency selection criteria. These misperceptions may result in a failure to match. From our own experiences as students, and in the process of counseling applicants, we know how difficult, anxiety-provoking, and mysterious the residency selection process is. In this book, we answer the question of what it takes to match successfully. We provide specific evidence-based advice to maximize your chances of a successful match. Who actually chooses the residents? We review the data on the decision makers. What do these decision makers care about? We review the data on the criteria that matter to

them. How can you convince them that you would be the right resident for their program? We provide concrete, practical recommendations based on this data. At every step of the process, our recommendations are meant to maximize the impact of your application. Utilizing a unique combination of evidence-based advice and an insiders' perspective, this book will

help you achieve your ultimate goal: The Successful Match.

Little, Brown Spark

Primary care medicine is the new

frontier in medicine. Every nation in the world has recognized the necessity to deliver personal and primary care to its people. This includes first-contact care, care based in a positive and caring personal relationship, care by a single healthcare provider for the majority of the patient's problems, coordination of all care by the patient's personal provider, advocacy for

the patient by the provider, the provision of preventive care and psychosocial care, as well as care for episodes of acute and chronic illness. These facets of care work most effectively when they are embedded in a coherent integrated approach. The support for primary care derives from several significant trends. First, technologically based care costs have rocketed beyond reason or availability,

occurring in the face of exploding populations and diminishing real resources in many parts of the world, even in the wealthier nations. Simultaneously, the primary care disciplines-general internal medicine and pediatrics and family medicine-have matured significantly. *Parenting Matters* McGraw Hill Professional After submitting your application for
