Jenna Fischer's Hollywood journey began at the age of 22 when she moved to Los Angeles from her hometown of St. Louis. With a theater degree in hand, she was determined, she was confident, she was ready to work hard. So, what could go wrong? Uh, basically everything. The path to being a professional actor was so much more vast and competitive than she'd imagined. It would be eight long years before she landed her iconic role on *The Office*, nearly a decade of frustration, struggle, rejection and doubt. If only she'd had a handbook for the aspiring actor. Or, better yet, someone to show her the way—an established actor who could educate her about the business, manage her expectations, and reassure her in those moments of despair. Jenna wants to be that person for you. With amusing candor and wit, Fischer spells out the nuts and bolts of getting established in the profession, based on her own memorable and hilarious experiences. She tells you how to get the right headshot, what to look for in representation, and the importance of joining forces with other like-minded artists and creating your own work—invaluable advice personally acquired from her many years of struggle. She provides helpful hints on how to be gutsy and take risks, the tricks to good

auditioning and callbacks, and how not to fall for certain scams (auditions in a guy's apartment are probably not legit—or at least not for the kind of part you're looking for!). Her inspiring, helpful guidance feels like a trusted friend who's made the journey, and has now returned to walk beside you, pointing out the pitfalls as you blaze your own path towards the life of a professional actor.

America's economy and lifestyles have been shaped by the low prices and availability of energy. In the last decade, however, the prices of oil, natural gas, and coal have increased dramatically, leaving consumers and the industrial and service sectors looking for ways to reduce energy use. To achieve greater energy efficiency, we need technology, more informed consumers and producers, and investments in more energy-efficient industrial processes, businesses, residences, and transportation. As part of the America's Energy Future project, *Real Prospects for Energy Efficiency in the United States* examines the potential for reducing energy demand through improving efficiency by using existing technologies, technologies developed but not yet utilized widely, and prospective technologies. The book evaluates technologies based on their estimated times to initial commercial deployment, and provides an analysis of costs, barriers, and research needs. This quantitative

characterization of technologies will guide policy makers toward planning the future of energy use in America. This book will also have much to offer to industry leaders, investors, environmentalists, and others looking for a practical diagnosis of energy efficiency possibilities.

The first volume in a new series dedicated to protein degradation, this book lays the foundations of targeted protein breakdown via the ubiquitin pathway. The outstanding importance of the ubiquitin pathway has

been recognized with the 2004 Nobel Prize in Chemistry for Aaron Ciechanover, Avram Hershko, and Irwin Rose. Aaron Ciechanover is one of the editors of this series, and Avram Hershko has contributed to the opening chapter of the present volume. Drawing on the the expertise of two Nobel prize winners, this handy reference compiles information on the initial steps of the ubiquitin pathway. Starting out with a broad view of protein degradation and its functions in cellular regulation, it then goes on to examine the

molecular mechanisms of ubiquitin conjugation and recycling in detail. All currently known classes of ubiquitin protein ligases are treated here, including latest structural data on these enzymes. Further volumes in the series cover the function of the proteasome, and the roles of the ubiquitin pathway in regulating key cellular processes, as well as its pathophysiological disease states. Required reading for molecular biologists, cell biologists and physiologists with an interest in protein degradation.
