“A good read for anyone
who wants to understand
what actually determines
whether a developing
economy will succeed.”
—Bill Gates, “Top 5 Books
of the Year” An Economist
Best Book of the Year
from a reporter who has
spent two decades in the

region, and who the Financial Times said “should be named chief myth-buster for Asian business.” In *How Asia Works*, Joe Studwell distills his extensive research into the economies of nine countries—Japan, South Korea, Taiwan, Indonesia, Malaysia, Thailand, the Philippines, Vietnam, and China—into an accessible, readable narrative that debunks Western misconceptions, shows what really happened in Asia and why, and for once makes clear why some countries have boomed while others have languished. Studwell’s in-depth analysis focuses on three main areas: land policy, manufacturing, and finance. Land reform has been essential to the success of Asian economies, giving a kick-start to development by utilizing a large workforce and providing capital for growth. With manufacturing, industrial development alone is not sufficient, Studwell argues. Instead, countries need “export discipline,” a government that forces companies to compete on the global scale. And in finance, effective regulation is essential for fostering, and sustaining growth. To explore all of

these subjects, Studwell journeys far and wide, drawing on fascinating examples from a Philippine sugar baron’s stifling of reform to the explosive growth at a Korean steel mill. “Provocative . . . *How Asia Works* is a striking and enlightening book . . . A lively mix of scholarship, reporting and polemic.” —The Economist

This book provides a comparative perspective on employment deconcentration within selected European metropolitan areas. The book introduces a comparative framework, followed by eight chapter-length case studies: three based in northern Europe, three in the south European-Mediterranean region and two in post-Communist central Europe. Most chapters examine two metropolitan areas, usually a large and a smaller one. The comparison reveals considerable variations in the magnitude, form, and process of employment deconcentration.

The water resources of the Mekong river catchment area, from China, through Thailand, Cambodia and Laos to Vietnam, are increasingly contested. Governments, companies and banks are driving new investment in roads, dams, diversions, irrigation schemes, navigation facilities, power plants and other emblems of conventional "development." Their plans and interventions pose multiple burdens and risks to the livelihoods of millions of people dependent on

wetlands, floodplains, fisheries and aquatic resources.

Global Nomads provides a unique introduction to the globalization of countercultures, a topic largely unknown in and outside academia.

Anthony D'Andrea examines the social life of mobile expatriates who live within a global circuit of countercultural practice in paradoxical paradises.

Based on nomadic fieldwork across Spain and India, the study analyzes how and why these post-metropolitan subjects reject the homeland in order to shape an alternative lifestyle. They become artists, therapists, exotic traders and bohemian workers seeking to integrate labor, mobility and spirituality within a cosmopolitan culture of expressive individualism. These countercultural formations, however, unfold under neo-liberal regimes that appropriate utopian spaces, practices and imaginaries as commodities for tourism, entertainment and media consumption. In order to understand the paradoxical globalization of countercultures, Global Nomads develops a

dialogue between global and critical studies by introducing the concept of 'neo-nomadism' which seeks to overcome some of the shortcomings in studies of globalization. This book is an essential aide for undergraduate, postgraduate and research students of Sociology, Anthropology of Globalization, Cultural Studies and Tourism Studies.

Starting in the early 1970s, a type of programmed cell death called apoptosis began to receive attention. Over the next three decades, research in this area continued at an accelerated rate. In the early 1990s, a second type of programmed cell death, autophagy, came into focus. Autophagy has been studied in mammalian cells for many years. The recent *Scalextric* CRC Press Japanese foreign direct investment has played a leading role in Asian economies for more than two decades. This book, describing the changing industrial dynamics after the Asian currency crisis in 1997, focuses on corporate strategies of Japanese automobile and electronics companies in

Asian nations, with detailed analysis of management issues and strategies from the viewpoint of both the home economy and the recipient host economies. Among the cases presented are the global restructuring of the Korean automobile industry and the transfer of automotive technology to China via Taiwan. Other studies, from the electronics industry, look at production sites in Malaysia, backward integration in Singapore, and forward integration in Hong Kong. The contributions of specialists from Asia, Europe, and the United States collected here envision an ongoing process of globalization and provide valuable perspective and background for business management and East Asian studies.
