This book, part of the European Society of Intensive Care Medicine textbook series, teaches readers how to use

hemodynamic monitoring, an essential skill for today's intensivists. It offers a valuable guide for beginners, as well as for experienced intensivists who want to hone their skills, helping both groups detect an inadequacy of perfusion and make the right choices to achieve the main goal of hemodynamic monitoring in the critically ill, i.e., to

correctly assess the cardiovascular system and its response to tissue oxygen demands. The book is divided into distinguished sections: from physiology to pathophysiology; clinical assessment and measurements; and clinical practice achievements including techniques, the basic goals in clinical practice

as well as the more appropriate hemodynamic therapy to be applied in different conditions. All chapters use a learning-oriented style, with practical examples, key points and take home messages, helping readers quickly absorb the content and, at the same time, apply what they have learned in the clinical setting. The European Society of Intensive Care Medicine has developed the Lessons from the ICU series with the vision of providing focused and

state-of-the-art overviews of central topics in Intensive Care and optimal resources for clinicians working in Intensive Care. Nutrition and Physical Fitness Tuttle Publishing  
The main goal of the new field of data mining is the analysis of large and complex datasets. Some very important datasets may be derived from business and industrial activities. This kind of data is known as OC enterprise dataOCO. The common characteristic of such datasets is that the

analyst wishes to analyze them for the purpose of designing a more cost-effective strategy for optimizing some type of performance measure, such as reducing production time, improving quality, eliminating wastes, or maximizing profit. Data in this category may describe different scheduling scenarios in a manufacturing environment, quality control of some process, fault diagnosis in the operation of a machine or process, risk analysis

when issuing credit to applicants, management of supply chains in a manufacturing system, or data for business related decision-making. Sample Chapter(s). Foreword (37 KB). Chapter 1: Enterprise Data Mining: A Review and Research Directions (655 KB). Contents: Enterprise Data Mining: A Review and Research Directions (T W Liao); Application and Comparison of Classification Techniques in Controlling Credit Risk (L Yu et al.); Predictive Classification with

Imbalanced Enterprise Data (S Daskalaki et al.); Data Mining Applications of Process Platform Formation for High Variety Production (J Jiao & L Zhang); Multivariate Control Charts from a Data Mining Perspective (G C Porzio & G Ragozini); Maintenance Planning Using Enterprise Data Mining (L P Khoo et al.); Mining Images of Cell-Based Assays (P Perner); Support Vector Machines and Applications (T B Trafalis & O O Oladunni); A Survey of Manifold-Based Learning Methods

(X Huo et al.); and other papers. Readership: Graduate students in engineering, computer science, and business schools; researchers and practioners of data mining with emphasis of enterprise data mining." *Brain Tumor Imaging* McGraw-Hill Education These proceedings report on an international workshop held in Kupang, in April 2006, to identify opportunities and constraints to improving livelihoods in East Nusa Tenggara using an integrated rural

A crucial and compelling account of *New York Times Co. v. Sullivan*, the landmark Supreme Court case that redefined libel, from the Pulitzer Prize-winning legal journalist Anthony Lewis. The First Amendment puts it this way: "Congress shall make no law...abridging the

freedom of speech, or of the press." Yet, in 1960, a city official in Montgomery, Alabama, sued *The New York Times* for libel—and was awarded \$500,000 by a local jury—because the paper had published an ad critical of Montgomery's brutal response to civil rights protests. The centuries of legal precedent behind the *Sullivan* case and the U.S. Supreme Court's historic reversal of the original verdict are expertly chronicled in this gripping and wonderfully

readable book by the Pulitzer Prize-winning legal journalist Anthony Lewis. It is our best account yet of a case that redefined what newspapers—and ordinary citizens—can print or say.

The knowledge discovery process is as old as Homo sapiens. Until some time ago this process was solely based on the 'natural personal' computer provided by Mother Nature.

Fortunately, in recent decades the problem has begun to be solved based on the development of the

Data mining technology, aided by the huge computational power of the 'artificial' computers. Digging intelligently in different large databases, data mining aims to extract implicit, previously unknown and potentially useful information from data, since “knowledge is power”. The goal of this book is to provide, in a friendly way, both theoretical concepts and, especially, practical techniques of this exciting field, ready to be applied in real-world situations. Accordingly, it is meant

for all those who wish to learn how to explore and analysis of large quantities of data in order to discover the hidden nugget of information. *Data Mining* Springer "Introduction to Cancer Biology is a short primer on how cancers develop and grow. The aim of this book is to provide a gentle exploration of the fundamental concepts in a easy-to-understand format, using examples and key figures for illustration. It is written in a style to help the reader understand the six basic

principles that inform our current understanding of cancer, at the molecular, cellular and physiological level. The text can be used either as a first step towards a deeper understanding of the mechanisms of cancer progression or it can be used as a quick revision guide. It would be suitable for anyone, with or without a background in biology."--Website. *Procurement of Works* Saunders Optimizing chain performance asks for cooperation between all

agents involved in the supply chain.

Designing and Managing the Supply Chain, 3/e provides state-of-the-art models, concepts, and solution methods that are important for the design, control, operation, and management of supply chain systems. In particular, the authors attempt to convey the intuition behind many key supply chain concepts and to provide simple techniques that can be

used to analyze various aspects of the supply chain. Topical coverage reflects the authors' desire to introduce students to those aspects of supply chain management that are critical to the success of a business. Although many essential supply chain management issues are interrelated, the authors strive to make each chapter as self-contained as possible, so that the reader can refer directly to chapters covering topics of interest. Each chapter utilizes numerous

case studies and examples, and mathematical and technical sections can be skipped without loss of continuity. The 3rd edition represents a substantial revision. While the structure and philosophy were kept intact, the authors placed an increasing importance on finding or developing effective frameworks that illustrate many important supply chain issues. At the same time, motivated by new developments in industry, they added material on a variety of

topics new to the book while increasing the coverage of others. Teaching English in Indian Schools Springer Science & Business Media

The Ecology of Papua provides a comprehensive review of current scientific knowledge on all aspects of the natural history of western (Indonesian) New Guinea. Designed for students of conservation, environmental workers, and academic researchers, it is a richly detailed text, dense with biogeographical data, historical reference, and

fresh insight on this complicated and marvelous region. We hope it will serve to raise awareness of Papua on a global as well as local scale, and to catalyze effective conservation of its most precious natural assets. New Guinea is the largest and highest tropical island, and one of the last great wilderness areas remaining on Earth. Papua, the western half of New Guinea, is noteworthy for its equatorial glaciers, its vast forested floodplains, its imposing central

mountain range, its Raja Ampat Archipelago, and its several hundred traditional forest-dwelling societies. One of the wildest places left in the world, Papua possesses extraordinary biological and cultural diversity. Today, Papua's environment is under threat from growing outside pressures to exploit its expansive forests and to develop large plantations of oil palm and biofuels. It is important that Papua's leadership balance economic development

with good resource management, to ensure the long-term well-being of its culturally diverse populace.

This book offers low-cost and rapid molecular assays for the characterization of mutant plant germplasm. Detailed protocols are provided for the desiccation of plant tissues; the extraction of high-quality DNA for downstream applications; the extraction of single-strand-specific nucleases for single nucleotide polymorphism; and small insertion/deletion

discovery using standard agarose gel electrophoresis. The methods described can be applied in any laboratory equipped for basic molecular biology and do away with the need for expensive freezers and toxic organic compounds. With the appropriate validation of sample quality and longevity, they can provide sufficient DNA for a variety of molecular applications, such as marker studies and TILLING, at approximately one tenth of the cost per sample

when compared to commercial kits.

The Analytic Network Process (ANP), developed by Thomas Saaty in his work on multicriteria decision making, applies network structures with dependence and feedback to complex decision making. This new edition

of Decision Making with the Analytic Network Process is a selection of the latest applications of ANP to economic, social and political decisions, and also to technological design. The ANP is a methodological tool that is helpful to organize knowledge and thinking, elicit judgments registered in both in memory and in feelings, quantify the judgments and derive priorities from them, and finally synthesize these diverse priorities into a single mathematically and

logically justifiable overall outcome. In the process of deriving this outcome, the ANP also allows for the representation and synthesis of diverse opinions in the midst of discussion and debate. The book focuses on the application of the ANP in three different areas: economics, the social sciences and the linking of measurement with human values. Economists can use the ANP for an alternate approach for dealing with economic problems than the usual mathematical models on

which economics bases its quantitative thinking. For psychologists, sociologists and political scientists, the ANP offers the methodology they have sought for some time to quantify and derive measurements for intangibles. Finally the book applies the ANP to provide people in the physical and engineering sciences with a quantitative method to link hard measurement to human values. In such a process, one is able to interpret the true meaning of

measurements made on a uniform scale using a unit. *Designing and Managing the Supply Chain 3e with Student CD* Prentice Hall This exhaustive reference includes new chapters and pedagogical features, as well as—for the first time—content on managing fragility fractures. To facilitate fast, easy absorption of the material, this edition has been streamlined and now includes more tables, charts, and treatment algorithms than ever before. Experts in their field share their

experiences and offer insights and guidance on the latest technical developments for common orthopaedic procedures, including their preferred treatment options.

This collection of more

than one hundred excerpts from speeches, lectures, articles, and pamphlets, most of the not previously available in English, is regarded as the principal source book on Indonesian politics for the post-revolution period of 1945-1965. Chosen to define and illuminate the country's complex issues, the selections provide a balanced, comprehensive, and well-ordered survey of Indonesian political thinking from just before independence to the fall of Sukarno. After an introduction by Herbert

Feith in which he discusses the Indonesian intellectual and his place in politics, the major and minor Indonesian figures of the period express their political views and their responses to the events of the first twenty years of independence. A commentary at the beginning of each chapter supplies background material relating to the selections. Three appendixes offer brief biographies of the Indonesian authors, a glossary of unfamiliar terms, and a

chronological chart. Indonesian Political Thinking, now brought back to life in Equinox Publishing's Classic Indonesia series, is a must-have resource for Indonesians and Indonesianists alike. HERBERT FEITH was professor of Politics at Monash University, Victoria, Australia. He first became familiar with Indonesian problems when he was an English

Language Assistant with the Ministry of Information of the Republic of Indonesia during the 1950s. He received the MA degree from the University of Melbourne, the PhD from Cornell University, and was a Research Fellow in the Department of Pacific History, Australian National University, 1960-62. Professor Feith is author of The Decline of

Constitutional Democracy in Indonesia, also a member of Equinox Publishing's Classic Indonesia series. LANCE CASTLES graduated from Melbourne University, Australia, received the MA degree from Monash University, and the PhD degree from Yale University. He is the author of Religion, Politics, and Economic Behavior in Java: The Kudus Cigarette Industry.
