In the not too distant future, an ancient bacterium is discovered by a group of scientists in the depths of the Amazon River basin. Found to have miraculous healing powers on the human brain, it fills the research team, led by noted Neurologist Dr. Lemuel Sanderson, with tremendous hope. That is until something goes terribly wrong. An unknown force is creating an army of undead bent on the destruction of the human race. Dr. Sanderson, with the assistance of an eccentric billionaire, sets out to track down one of his former test subjects. One he firmly believes holds the key to putting an end to this nightmare. Major Charles "Butch" Bradley has been entrusted with the evacuation of Washington D.C. Along the way he rescues a group of college students, a mother and her two children, and a stubborn outdoorsman with a penchant for blowing things up. He is now responsible for their safety as he and his men navigate this dangerous new world, looking for a safe haven. As events unfold, the Major and Dr. Sanderson find themselves on a collision course whose outcome may determine the fate of humanity.

Having a little sister isn't always a picnic. Older sisters may feel jealous of the time taken away from them, the toys they have to share, and the attention focused on the youngest member of their family. Getting along is often a day-to-day battle, but what can parents do to make this situation easier and to help children realize how special it is to have a sister? In *Spice & Little Sugar*, the delightful new children's book about sibling rivalry, authors Megan Waldrep and Melissa Nelson show big sisters the big benefits, responsibilities, and absolute joys of their role. Told in a whimsical rhyme that children will love to read aloud, *Spice & Little Sugar* first humorously relates all the ways Little Sugar gets on Spice's nerves, from grabbing her favorite toys to sticking to her like glue when Spice wants to be left alone. But gradually Spice comes to realize that Little Sugar does have her good points, including sticking up for her when she gets in trouble with their parents and saving the day with her cute face. Parents will love the warm, gentle lessons the book teaches about understanding how positives can outweigh negatives, and kids will laugh at the playful illustrations and funny story. The perfect book for siblings, *Spice & Little Sugar* can be read and enjoyed by the whole family, time and time again.

Jean Watson's first edition of *Nursing*, now considered a classic, introduced the science of human caring and quickly became one of the most widely used and respected sources of conceptual models for nursing. This completely new edition offers a contemporary update and the most current perspectives on the evolution of the original philosophy and science of caring from the field's founding scholar. A core concept for nurses and the professional and non-professional people they interact with, "care" is one of the field's least understood terms, enshrouded in conflicting expectations and meanings. Although its usages vary among cultures, caring is universal and timeless at the human level, transcending societies, religions, belief systems, and geographic boundaries, moving from Self to Other to community and beyond, affecting all of life. This new edition reflects on the universal effects of caring and connects caring with love as the primordial moral basis both for the philosophy and science of caring practices and for healing itself. It introduces Caritas Processes, offers centering and mediation exercises on an included audio CD, and provides other energetic and reflective models to assist students and practitioners in cultivating a new level of Caritas Nursing in their work and world.

Care plans are presented within a nursing process framework that is coordinated with clinical judgement, and case studies show how to apply concepts to nursing practice. From an expert author team led by Patricia Potter and Anne Perry, this bestselling nursing textbook helps you develop the understanding and clinical judgment you need to succeed in the classroom and in your career.

Elevating Child Care: A Guide to Respectful Parenting Cengage Learning

'Caring and the Law' considers the law's response to caring. It explores how care is valued and recognised, how it is regulated and restricted and how the values of caring are reflected in the law. It does this by examining the law's interaction with caring in a wide range of fields including family, medical, welfare, criminal and tort law. At the heart of the book is the claim that the law has failed to recognise the importance of caring in many areas and in doing so has led to the costs and burdens of care falling on those who provide it, primarily women. It has also meant that the law has failed to protect those who receive care from the abuse that can take place in a caring context. The book promotes an ethic of care as providing an ethical and conceptual framework for the law to respond to caring relationships.

Caring for Liberalism brings together chapters that explore how liberal political theory, in its many guises, might be modified or transformed to take the fact of dependency on board. In addressing the place of care in liberalism, this collection advances the idea that care ethics can help respond to legitimate criticisms from feminists who argue that liberalism ignores issues of race, class, and ethnicity. The chapters do not simply add care to existing liberal political frameworks; rather, they explore how integrating dependency might leave core components of the traditional liberal philosophical apparatus intact, while transforming other aspects of it. Additionally, the contributors address the design of social and political institutions through which care is given and received, with special attention paid to non-Western care practices. This book will appeal to scholars working on liberalism in philosophy, political science, law, and public policy, and it is a must-read for feminist political philosophers.

This book, entitled "How to Fly like an Eagle," is a motivational book written by the author in French, Spanish, and English to help people learn the techniques and to get the skills to help them to fly to the top like that bird of prey which is the eagle. In this book, the

readers will learn how to overcome obstacles and to cultivate the fruit of persistence which is an essential factor in the process of transformation of desire into its monetary equivalent. The basis of persistence is the power of will. When this power and desire combine correctly, they form an irresistible combination, the perfect one to help you overcome your failures. There are four simple steps which lead to the habit of persistence. This does not require a large amount of intelligence or a special education, but time and minimal effort. The four steps are as follows: 1- A target set backed by a burning desire to achieve it. 2- A definite plan, expressed in continuous action. 3- A closed mind to any negative influence (including negative suggestions of relatives, friends and others). 4- A harmonious agreement with one or more persons, able to lead someone to go forward with the plan and with the goal. These four steps are essential for success in all areas of life. These are the steps with which you can control your economic destiny. These are the steps that lead to freedom and independence of thought, that convert dreams into reality. These are the steps that lead to the domination of fear, discouragement and indifference. I do not know the situation you are facing currently, maybe you are in a wheelchair, or in a hospital bed and without any hope of survival, maybe you're on the verge of divorce, or you are unable to complete your schooling or university, or find a job. You can now be crawling like a snake or you have broken wings preventing you from being able to fly like an eagle, but one thing is certain, regardless of your economic, family, health situation you can have a better life, develop your potential and fly as high as the eagle above any obstacles or

constraints you are facing right now. Of course, this will be possible if you apply the principles to be taught in this book. I testify to you with all my heart that this book has the power to transform the lives of people from nothing to excellence, from the dust of the ground to the top of success. I promise you if you read it, and put the principles into practice, your life will be completely blessed!

Suffering is a central component of our lives. We suffer pain. We fall ill. We fail and are failed. Our loved ones die. It is a commonplace to think that suffering is, always and everywhere, bad. But might suffering also be good? If so, in what ways might suffering have positive, as well as negative, value? This important volume examines these questions and is the first comprehensive examination of suffering from a philosophical perspective. An outstanding roster of international contributors explore the nature of suffering, pain, and valence, as well as the value of suffering and the relationships between suffering, morality, and rationality. *Philosophy of Suffering: Metaphysics, Value, and Normativity* is essential reading for students and researchers in philosophy of mind, philosophy of psychology, cognitive and behavioral psychology as well as those in health and medicine researching conceptual issues regarding suffering and pain.

Janet Lansbury's advice on respectful parenting is quoted and shared by millions of readers worldwide. Inspired by the pioneering parenting philosophy of her friend and mentor, Magda Gerber,

Janet's influential voice encourages parents and child care professionals to perceive babies as unique, capable human beings with natural abilities to learn without being taught; to develop motor and cognitive skills; communicate; face age appropriate struggles; initiate and direct independent play for extended periods; and much more. Once we are able to view our children in this light, even the most common daily parenting experiences become stimulating opportunities to learn, discover, and to connect with our child. "Elevating Child Care" is a collection of 30 popular and widely read articles from Janet's website that focus on some of the most common infant/toddler issues: eating, sleeping, diaper changes, communication, separation, focus and attention span, creativity, boundaries, and more. Eschewing the quick-fix 'tips and tricks' of popular parenting culture, Janet's insightful philosophy lays the foundation for a closer, more fulfilling parent/child relationship, and children who grow up to be authentic, confident, successful adults.

Caring and the Law On the origin of Mind Trying to grasp the teachings of Wu Hsin is like trying to grasp the wind in the palm of your hand. While they are as refreshing and fragrant as a fresh breeze, they can also be as devastating as a wildfire. Wu Hsin doesn't provide answers to the questions of life because life is its own answer. It is what-is. It moves, it flows, it breathes itself into and through everything. Instead, the writings of Wu Hsin expose, without compromise, the fundamental misconception that there is something called an individual that needs to find something else outside of itself. Admittedly, the sense of being a separate individual feels very real and affects every part of that

apparent experience. Wu Hsin makes it abundantly clear; however, that this is a state of contracted energy, a sense of having lost something unnameable.

The subject of this book is young children's emotional-social learning and development within early childhood care and education settings in Aotearoa-New Zealand. The focus on emotional complexity fills a gap in early childhood care and education research where young children are frequently framed narrowly as 'learners,' ignoring the importance of emotional functioning and the feelings with which children make sense of themselves and the world. This book draws on original data in the form of narrative-like framed events to creatively illustrate the complexities in children's diverse ways of feeling, thinking, playing, being, and becoming. Events illuminate the feelings and meanings of observed experiences in holistic and contextualised gestalts. Awareness of unconscious processes, the feeling of feelings, and cultural dimensions of development and meaning-making are addressed. The book emphasises the emergent and

psychodynamic nature of children's development and learning with strong links to the role of play and playfulness in the events, drawing on two ethnographically inspired research projects that present theory, experience and practice in real-life events.

Young Children Playing F.A. Davis

What's the difference between an activity and an experience? One is meant to pass the time, the other to last a lifetime. Make the most of your interactions with young children with experiences that allow infants and toddlers to figure out how something works on their own. This book describes a process of learning that involves repeated interaction with and exploration of a caring environment, which builds trust between children and you. Each experience offers children the chance to choose their own approaches to tasks that promote their development. Focusing on the "Three Cs"—curiosity, connection, and coordination—each experience is described simply and includes a list of materials that are needed and tips to keep in mind. In addition, each experience includes specific strategies to help you promote the healthiest development in infants and toddlers.
