 Services – from information technology to research to finance – are now as subject to international trade as goods have been for decades. What are the labor market consequences of the recent surge in services offshoring? While offshoring has traditionally been found to affect only less-skilled workers in industrialized countries, this study finds that services offshoring also has negative consequences for high-skilled workers. Focusing on the case of Germany, Deborah Winkler shows how services offshoring has grown, who is most affected and what policy makers can do. Winkler measures the impact of services offshoring on German productivity, employment, and employment structure. She provides a well-balanced synthesis of theoretical insights, detailed empirical analysis, and economic policy recommendations. Although her main focus is on the case of Germany, many insights are also applicable to other developed countries.

Geography and Ownership as Bases for Economic Accounting provides a forum for leading specialists in trade and international economics to explore whether changes in the world economy have increased the usefulness of international accounts drawn up on the basis of ownership rather than on geography. The papers in this volume suggest that ownership-based national accounts are helpful in understanding trade and financial transactions among globalized enterprises. Individual chapters emphasize this perspective through accounting exercises, studies of individual countries, and studies of foreign direct investment and its relation to national economies. This volume gives trade and international economists the data and resources to renew discussion of this timely issue.
