Effects of Insurance on Maritime Liability Law Springer Science & Business Media

The book examines how the absence of insurance in the past led to some special maritime liability law principles such as 'general average' (i.e., losses or expenses shared by all the parties to a maritime adventure) and the limitation

of shipowners' liability. In the absence of insurance, these principles served the function of insurance mostly for shipowners. As commercial marine insurance is now widely available, these principles have lost their justification and may in fact interfere with the most important goal of liability law i.e., deterrence from negligence. The work thus recommends their abolition. It further argues that when insurance is easily available and affordable to the both parties to a liability claim, the main

goal of liability law should be deterrence as opposed to compensation. This is exactly the case with the maritime cargo liability claims where both cargo owners and shipowners are invariably insured. As a result, the sole focus of cargo liability law should be and to a great extent, is deterrence. On the other hand in the vessel-source oil pollution liability setting, pollution victims are not usually insured. Therefore oil pollution liability law has to cater both for compensation and deterrence, the two traditional goals of liability law. The final question the work addresses is whether the deterrent effect of liability law is affected by the availability of liability insurance. Contrary to the popular belief the work attempts to prove that the presence of liability insurance is not necessarily a

hindrance but can be a complementary force towards the realization of deterrent goal of liability law.

Climate change and rising oil prices have thrust the Arctic to the top of the foreign policy agenda and raised difficult issues of sovereignty, security and environmental protection. Improved access for shipping and resource development is leading to new international rules on safety, pollution prevention and emergency response. Around the Arctic, maritime boundary disputes are being negotiated and resolved, and new international institutions, such as the Arctic Council, are mediating deep-rooted tensions between Russia and NATO and between nation states and indigenous peoples. International Law and the Arctic explains these developments and reveals a strong trend towards international cooperation and law-making. It thus

contradicts the widespread misconception that the Arctic is an unregulated zone of potential conflict. **The Bunker Hill Monument, Adams and Jefferson** Edward Elgar Publishing Oil tankers are not solely to blame for pollution at sea. Non-tankers have released numerous spills. The International Convention on Civil Liability for Bunker Oil Pollution Damage has been adopted, but has not yet come into force. This timely and comprehensive book studies compulsory insurance, its main purpose of ensuring compensation and its interrelations with other features such as the rule of strict liability, the limitation of liability of that convention. Opinions and Orders Springer Science & Business Media There have been important

developments in commercial practice, technology, shipping infrastructure and sustainability policies in recent times. This Research Handbook examines the major themes surrounding the thinking and studies of maritime law and practice. The stellar panel of contributors take a diverse range of approaches to identify any emerging theoretical and conceptual perspectives in law on what is essentially a fast paced sector of the global economy.

Lloyd's List Law Reports Taylor & Francis Formed at the beginning of World War II, the 101st Airborne Division has fought in almost every major conflict since then, including Operations Enduring and Iraqi Freedom. Going from a parachute and glider infantry in its early days to an air assault division in our own--the only one

in the world--the "Screaming Eagles" are trained to destroy enemy forces while seizing land and resources. They are a rapid deployment group prepared to go anywhere in the world within thirty-six hours. And, for good reason, they are probably the best-known army division in the world. In this book, top military photographer and former U.S. Army Ranger Russ Bryant takes you inside the 101st Airborne. In training and in action, on land and in the air: Here are the Screaming Eagles as youve never seen them, in a close-up, multi-faceted portrait of courage and skill as a fact of everyday life. The book brilliantly illustrates why the 101st Airborne is the vanguard in its field--and in the world. *Annals of the Missouri Botanical Garden* Peter Lang

This book deals with the liability conventions brought into existence by the International Maritime Organization and concentrates on the newly adopted instrument dealing with bunker oil pollution as an area of great concern for every stakeholder involved in shipping business. The work covers a wide spectrum ranging from the Convention itself to its scope of application, liable and aggrieved parties, jurisdiction, requirements of liability and admissibility of claims, defences and exoneration from liability. It addresses many areas of interest and of importance to international and national legal advisors, lawyers, law students and anyone interested in the relevant field such as shipowners, charterers, shipbrokers, ship personnel and associated contractors

and sub-contractors.

TRILL. The Trill are a combination of a symbiont and a host. The symbiont lives for hundreds of years in one host after another: each body is different, each personality is different, each life is different - but all of them are one. The symbiont accumulates experiences, relationships, memories ... Andy Mangels and Michael A. Martin have set their story on this most multi-layered and extraordinary of worlds. When Trill involvement in the assassination of an allied world leader comes to light, the reason lies in the terrifying and tragic origins of the Trill - and the answers reveal unsuspected links to other regions

of the Star Trek universe. BAJOR. Political intrigue and interpersonal conflict in the style of *The West Wing* dominate on Deep Space Nine's core world of Bajor. The future of Bajor and the new role of long-missing Captain Benjamin Sisko are linked as this tale lays the groundwork for a major new storyline in further Deep Space Nine novels.

Discover more about the Star Trek planets Trill and Bajor with these two sweeping and unputdownable stories starring Ezri Dax, Kira Nerys, and Benjamin Sisko of the space station Deep Space Nine. They are a people with secrets in Trill. For centuries, they kept their true nature hidden, even taking

disturbing steps to protect the small population of near-immortal symbionts with whom a privileged few Trill are joined, body, mind, and soul. They are a people who hold memory to be sacred, yet deny their own past. Now amid a whirlwind of scandal, accusations, and civil unrest, Ezri Dax must penetrate millennia of lies and deceptions, and rediscover what should never have been forgotten. Meanwhile, in Bajor, the honeymoon is over. Following the euphoria of Bajor's entry into the Federation, the real business of making that union work has begun. But even on a world where politics and religion are intertwined, conflicting visions of Bajor's role in the interstellar arena divide the planet's leadership. As newly minted Captain Kira Nerys sets the tone for the

kind of Starfleet officer she will be, First Minister Asarem makes a bold move to define Bajor's voice in the Federation, while the returned Benjamin Sisko prepares for a future that only he, as yet, can see.

The Battle of Bunker Hill On the 100th anniversary of the Battle of Bunker Hill, George E. Ellis, using original source documents and letters, creates an account of the Battle of Bunker Hill. Ellis explores the first hand accounts of both citizen and soldier. He provides us with the origins of the rebel soldier, elaborates on the attitude of the invading British army and the ensuing battle over the heights of Charlestown. Originally published in 1875. George Ellis (1814-1894) would become the

President of The Massachusetts Historical Society, the oldest historical society in the United States, in 1887.

Six Little Bunkers at Mammy June's

· Merchant shipping remains the largest carrier of freight throughout recorded history due to the economic advantages involved. Optimum management of the global propulsion power may result in large cut down of marine fuel grades, which will in turn benefit environment and the economics of the shipping community. · Although, water transport is still the most efficient mode (small ratio of CO₂ per cargo ton per mile) the aim is for vessel's further energy efficiency optimization, bunker minimization and in turn reduction of CO₂, NO_x, SO_x. An energy efficiency management scheme cannot be

sustained unless a meaningful and practical mode of monitoring is applied. *A History of the Cutter Family of New England*
