 An attractive manner is assured if we will avoid the following: Sarcasm, impertinence, ridicule, hot temper, profanity, roughness, brutality, vulgarity, a loud voice, and grouchiness.- from Chapter III, "The Development of Your Magnetic Power" The New Thought movement of the turn of the twentieth century combined Christian spirituality with the paranormal in order to give practical expression to the forces of the universe. Or so its proponents believed. One of the most influential thinkers of this early "New Age" philosophy promises here, in this 1914 book, to share "in a condensed, non-mystical style all I have been able to learn of this wonderful power" of personal magnetism. Mysteries revealed include: .the secrets of being naturally magnetic.the

development of your magnetic power.how to use your personality to win the affection of the opposite sex.how to cultivate success.how to protect yourself against injurious thought attraction.how to make yourself a great power in the world.a formula for creating happinessToday's hunger for self-help, personal empowerment, and pop spirituality has its origins in a craving for self-improvement that's a century old, as this captivating little book demonstrates.Also available from Cosimo Classics: The Art and Science of Personal Magnetism: The Secrets of Mental Fascination, by Theron Q. Dumont.American writer WILLIAM WALKER ATKINSON (1862-1932)-aka Theron Q. Dumont-was born in Baltimore and had built up a successful law practice in Pennsylvania before professional burnout led him to the religious New Thought movement. He served as editor of the popular magazine New Thought from 1901 to 1905, and as editor of the journal Advanced Thought from 1916 to 1919.

Two National Forensic Science Institute administrators invite readers into what the Washington Post calls "the Harvard of hellish violence"-the only hands-on CSI school of its kind where students are trained in burial recovery with actual human remains. With exclusive access to a world normally off-limits to

the public, this is the first book to go behind the scenes of the ten-week course that discloses the uncensored realities of burial exhumations and the fascinating art of forensic investigation.

R is a powerful tool for statistics and graphics, but getting started with this language can be frustrating. This short, concise book provides beginners with a selection of how-to recipes to solve simple problems with R. Each solution gives you just what you need to know to use R for basic statistics, graphics, and regression. You'll find recipes on reading data files, creating data frames, computing basic statistics, testing means and correlations, creating a scatter plot, performing simple linear regression, and many more. These solutions were selected from O'Reilly's R Cookbook, which contains more than 200 recipes for R that you'll find useful once you move beyond the basics.

Boundaries of Evolution describes the unlikelihood of evolutionary theory to explain how it is supposed to scale three major biological cliffs. The first cliff is the need for a logical explanation of how random chemical reactions could produce the first living cell from the primordial soup. The second is the problem of explaining how the first single-celled eukaryote evolved from a prokaryote. Mathematical improbabilities of evolutionary theory to scale the first two cliffs, in the time available, are

demonstrated. The third insurmountable cliff is the necessity for a reasonable explanation of how millions of different kinds of multi-celled eukaryotes could have quickly evolved from single-celled eukaryotes. Random mutations occurring in DNA, accepted or rejected by natural selection, are hailed as the source of advancement for the increase in biotic complexity. The most common time for mutations to occur in the DNA is during replication. Therefore, evolutionary advancement should occur faster in biota with the most frequent replication cycles. If both evolutionary theory and the fossil record are correct, prokaryotes, which replicate in as little as 20 minutes took 2 billion years to evolve the first single-celled eukaryote. Single-celled eukaryotes, generally having shorter reproductive times than multi-celled eukaryotes, took another billion years to evolve the first multi-celled eukaryote. Then during Cambrian times, the multi-celled eukaryotes with the longest reproductive cycles literally exploded in diversity in a comparatively short time. How could this be? Other inadequacies of Darwin's theory are presented for everyone to see.

Formally known as Exercises in Health Claims Examining, The

Practice of Health Claims Examining, 2e, contains a simulated work program to help you experience the real life situations that a claims examiner experiences on a daily basis. This book is created for use in conjunction with ICDC Publishing's Guide to Health Claims Examining. Some of the exercises in the simulated work portion of the book are based upon concepts learned in the Guide to Health Claims Examining (i.e., procedures for processing claims, interpretation of contracts, understanding UCR and deductibles, etc.). This book alone should not be considered a complete text for learning health claims examining. It is suggested that a trainee take a complete health claims examining course prior to using this book. The simulated work portion of this text incorporates concepts which are not taught by simple data entry, for example UCR calculations, privacy guidelines, client record keeping, correspondence, and manual completion of claims processing. This text is designed to allow the student to work through the material at their own pace.

When Computers Went to Sea explores the history of the United States Navy's secret development of code-breaking computers and their adaptation to solve a critical fleet radar data handling problem in the Navy's first seaborne digital computer system - that went to sea in 1962. This is the only book written on the United States Navy's initial application of shipboard digital computers to naval warfare. Considered one of the most successful projects ever undertaken by the US Navy, the Naval Tactical Data System (NTDS) was the subject of numerous studies attempting to pinpoint the reason for the systems inordinate success in the face of seemingly impossible technical challenges and stiff resistance from some in the military. The system's success precipitated a digital revolution in naval warfare systems. Dave Boslaugh details the innovations developed by the NTDS project managers including: project management techniques, modular digital hardware for ship systems, top-down modular computer programming techniques, innovative computer program documentation, and other novel real-time computer system concepts. Automated military systems users and developers, real-time process control systems designers, automated system project managers, and digital technology history students will find this account of a United States military organization's initial foray into computerization interesting and thought provoking.

"Lively, thought-provoking . . . the plot is ingenious, packing a wallop of a surprise . . . Tepper knows how to write a well-made, on-moving story with strong characters. . . . She takes the mental risks that are the lifeblood of science fiction and all imaginative narrative."—Ursula K. LeGuin, Los Angeles Times Since the flames died three hundred years ago, human civilization has evolved into a dual society: Women's Country, where walled towns enclose what's left of past civilization, nurtured by women and a few nonviolent men; and the adjacent garrisons where warrior men live—the lost brothers, sons, and lovers of those in Women's Country. Two societies. Two competing dreams. Two ways of life, kept apart by walls stronger than stone. And yet there is a gate between them. . . . "Tepper not only keeps us reading . . . she provokes a new look at the old issues."—The Washington Post "Tepper's cast of both ordinary and extraordinary people play out a powerful drama whose significance goes beyond sex to deal with the toughest problem

of all, the challenge of surmounting humanity's most dangerous flaws so we can survive—despite ourselves."—Locus
