Active Reading in the Arts and Sciences Heinle & Heinle Pub  
Discover the essential thinking tools you've been missing with The Great Mental Models series by Shane Parrish, New York Times bestselling author and the mind behind the acclaimed Farnam Street blog and "The Knowledge Project" podcast. This first book in the series is your guide to learning the crucial thinking tools nobody ever taught you. Time and time again, great thinkers such as Charlie Munger and Warren Buffett have credited their success to mental models--representations of how something works that can scale onto other fields. Mastering a small number of mental models enables you to rapidly grasp new information, identify patterns others miss, and avoid the common mistakes that hold people back. The Great Mental Models: Volume 1, General Thinking Concepts shows you how making a few tiny changes in the way you think can deliver big results. Drawing on examples from history, business, art, and science, this book details nine of the most versatile, all-purpose mental models you can use right away to improve your decision making and productivity. This book will teach you how to: Avoid blind spots when looking at problems. Find non-obvious solutions. Anticipate and achieve desired outcomes. Play to your strengths, avoid your weaknesses, ... and more. The Great Mental Models series demystifies once elusive concepts and illuminates rich knowledge that traditional education overlooks. This series is the most comprehensive and accessible guide on using mental

models to better understand our world, solve problems, and gain an advantage.

Active Skills for Reading Pearson Education

Active Reading in the Arts and Sciences is designed to develop students' critical thinking abilities as they apply to the reading of college textbooks and other academic materials. The art of questioning with extensive demonstrations of what questions to ask in reading discipline-specific materials and which answers to look for forms the underlying structure of the book. The book is divided into four general sections. Part I introduces students to basic reading skills required for college work such as the connections between thinking and reading, words and ideas, generalizations and supporting material, and previewing and efficient reading. Part II moves students through the analytical reading skills of recognizing and working with the organization of material to the critical reading skills of determining an author's purpose and methods of evaluating an author's evidence and reasoning and ends with a chapter on general reading and strategies studies. Part III follows with chapters on the application of the skills and techniques learned to reading in specific academic fields. Part IV applies the skills learned to specific disciplines the humanities, the natural sciences, and the social sciences and history. Students learn the roles of patterns of thought and the roles of evidence in these areas.

"This book will prove a valuable resource for parents, teachers, and librarians on the vital topic of reading aloud." Library Journal, Starred Review Parents and teachers know that reading aloud to children is important, and many parents of infants and toddlers read aloud to them daily. However, when children start to read on their own, parents often stop reading aloud. But these early elementary school years are actually a perfect time to build vocabulary and comprehension skills through reading aloud and Active Reading. Raising an Active Reader makes clear the process of learning to read, how Active Reading fits into raising strong readers, and what adults can do to encourage strong language, comprehension, and vocabulary in children in grades K-3. This book extends on the ABCs of Active Reading (Ask Questions, Build Vocabulary, and make Connections) as they apply to older children for picture books, chapter books, and novels. Far too often, our students attain only a superficial level of knowledge that fails to prepare them for deeper challenges in school and beyond. In Teaching for Deeper Learning, renowned educators and best-selling authors Jay McTighe and Harvey F. Silver propose a solution: teaching students to make meaning for themselves. Contending that the ability to "earn" understanding will equip students to thrive in school, at work, and in life, the authors highlight seven higher-order thinking skills that facilitate students' acquisition of information for greater retention, retrieval, and transfer. These skills, which cut across content areas and grade levels and are deeply embedded in current academic standards, separate high achievers from their low-performing peers. Drawing on their deep well of research and experience, the authors - Explore what kind of content is worth having students make meaning about. - Provide practical tools and strategies to help teachers target each of the seven thinking skills in the classroom. - Explain how teachers can incorporate the thinking skills and tools into lesson and unit design. - Show how teachers can build students' capacity to use the strategies independently. If our goal is to prepare students to meet the rigorous demands of school, college, and career, then we must foster their ability to respond to such challenges. This comprehensive, practical guide will enable teachers to engage students in the kind of learning that yields enduring understanding and valuable skills that they can use throughout their lives.
