Housing The Future: Alternative Approaches for Tomorrow offers three perspectives on the problems of housing today with an eye on tomorrow. It brings together world-leading practising architects with academics from seven countries and teams of international students. World leaders in the field of residential design such as UN Habitat Award winner Avi Friedman present built projects whose design criteria and aims they lay out in text. Academics from the UK, the USA, Spain, Germany and elsewhere follow these project descriptions with extended essays from a more theoretical perspective but remain focused on the realities of practice. Finally, ideas on current housing problems from the next generation of designers are brought together in student projects from Europe and North America. With an introduction by Dr Graham Cairns, this book highlights the practice of residential design internationally at a time when affordable housing provision is seen as a critical issue by designers, planners and policy makers alike.

Student Housing McGraw-Hill/Glencoe  
The first survey of the classic twentieth-century houses that defined American Midwestern modernism. Famed as the birthplace of that icon of twentieth-century architecture, the skyscraper, Chicago also cultivated a more humble but no less consequential form of modernism--the private residence. Modern in the Middle: Chicago Houses 1929-75 explores the substantial yet overlooked role that Chicago and its suburbs played in the development of the modern single-family house in the twentieth century. In a city often associated with the outsize reputations of Frank Lloyd Wright and Ludwig Mies van der Rohe, the examples discussed in this generously illustrated book expand and enrich the story of the region's built environment. Authors Susan Benjamin and Michelangelo Sabatino survey dozens of influential houses by architects whose contributions are ripe for reappraisal, such as Paul Schweikher, Harry Weese, Keck & Keck, and William Pereira. From the bold, early example of the "Battledock House" by Henry Dubin (1930) to John Vinci and Lawrence Kenny's gem the Freeark House (1975), the generation-spanning residences discussed here reveal how these

architects contended with climate and natural setting while negotiating the dominant influences of Wright and Mies. They also reveal how residential clients--typically middle-class professionals, progressive in their thinking--helped to trailblaze modern architecture in America. Though reflecting different approaches to site, space, structure, and materials, the examples in *Modern in the Middle* reveal an abundance of astonishing houses that have never been collected into one study--until now.

The privately rented housing market has largely catered for young, mobile people and students since it was deregulated in the UK. In this volume, key writers provide timely insights into this rapidly evolving market. This volume is based on new, original research which brings together specialists in housing policy and legal studies, with their common and increasingly interdependent knowledge base about the privately rented sector and its future direction. The collection opens with an overview of the historical context and recent changes to the sector, such as the rapid and continued expansion of the buy-to-let market, followed by a discussion of the factors shaping the contemporary market. The contributors show how the new regulatory environment is opening a series of issues with significant potential to affect (and potentially damage) the market. The volume will interest academics and students in social and public policy, law and housing studies, as well as law practices and housing authorities.

Current design modes of student residences are facing challenges of both philosophy and form. Past approaches no longer sustain new demands and require innovative thinking. The need for a new outlook is propelled by fundamental changes that touch upon environmental, economic, and social factors. Thinking innovatively about university accommodation led to the idea to write *Innovative Student Residences*. The author offer a fascinating insight into contemporary design concepts and illustrates them with outstanding examples, showcased by full-color photography and detailed plans.

Demographics are driving unprecedented opportunities in the student housing market. Enrollment at colleges and universities is booming. An estimated 75 million people will reach college age in the next decade. Add to that the growing shortage of on-campus, university-owned student housing. As a result, real estate investors are eyeing this specialized and highly profitable market niche. Michael H. Zaransky, real estate veteran and author of *Profit by Investing in Student Housing*, shows readers precisely how to build wealth investing in student housing properties. While many other books discuss niche investment opportunities in real estate, this is the first to provide a complete, detailed approach to investing in student housing. *Profit by Investing in Student Housing* covers all the critical components of this specialized area of real estate investing—from identifying prime college markets and choosing profitable properties, to obtaining debt financing, raising equity, and closing deals. Readers learn to assess their

return on investment for all housing types from single-family homes and condos to multifamily apartment buildings and privately operated dorms. Real-life anecdotes make this book more than a hypothetical treatise on real estate investing. *Profit by Investing in Student Housing* shows novices and veteran investors alike how to duplicate the extraordinary success of leaders in this market niche. No other real estate book today offers the same quality and breadth of information on this subject. Highlights *Profit by Investing in Student Housing* shows real estate investors:

- Why demographics will drive demand for student housing in years to come
- How to locate and analyze the best deals on student housing properties
- Unique methods of financing and raising equity
- Minimizing risk in acquiring and operating student housing investments

Today, there is a tremendous mismatch between the available housing stock in the US and the housing options that people want and need. The post-WWII, auto-centric, single-family-development model no longer meets the needs of residents. Urban areas in the US are experiencing dramatically shifting household and cultural demographics and a growing demand for walkable urban living. *Missing Middle Housing*, a term coined by Daniel Parolek, describes the walkable, desirable, yet attainable housing that many people across the

country are struggling to find. Missing Middle Housing types—such as duplexes, fourplexes, and bungalow courts—can provide options along a spectrum of affordability. In *Missing Middle Housing*, Parolek, an architect and urban designer, illustrates the power of these housing types to meet today's diverse housing needs. With the benefit of beautiful full-color graphics, Parolek goes into depth about the benefits and qualities of Missing Middle Housing. The book demonstrates why more developers should be building Missing Middle Housing and defines the barriers cities need to remove to enable it to be built. Case studies of built projects show what is possible, from the Prairie Queen Neighborhood in Omaha, Nebraska to the Sonoma Wildfire Cottages, in California. A chapter from urban scholar Arthur C. Nelson uses data analysis to highlight the urgency to deliver Missing Middle Housing. Parolek proves that density is too blunt of an instrument to effectively regulate for twenty-first-century housing needs. Complete industries and systems will have to be rethought to help deliver the broad range of Missing Middle Housing needed to meet the demand, as this book shows. Whether you are a planner, architect, builder, or city leader, *Missing Middle Housing* will help you think differently about how to address housing needs for today's communities.

### Housing the Future

During the first four decades of the twentieth century, prefabricated and catalogue homes grew in popularity and number. Built and occupied by farmers, merchants, the new armies of factory workers and other lower- and middle-class families, these are the modest homes that today line American streets. Using mail-order house catalogues from the time, Robert Schweitzer and Michael

W. R. Davis chart the development of catalogue houses and their variations and include floor plans for many models. Students of architecture, whether amateur or professional, preservationists and academics will find in America's Favorite Homes a handy reference to those homes that soon will be eligible for historic designation.
