Perinatal Derivatives and the Road to Clinical Translation, Volume I  
Lulu Press, Inc

Il volume, secondo della serie dedicata alle ricerche ambientali, archeologiche e storiche nel Wadi Tanezzuft, l'imponente valle fluviale a occidente delle montagne del Tadrart Akakus, presenta la pubblicazione finale delle indagini condotte nel villaggio fortificato di Aghram Nadharif nell'oasi di Barkat. L'insediamento ebbe vita fiorente dal 50 ca. a.C. al 250 ca. d.C. e offre per la prima volta un quadro completo di un abitato dell'età garamantica nell'età classica. Oltre alla pubblicazione dello scavo e dei reperti archeologici, botanici e faunistici rinvenuti, il volume contiene una serie di interventi sulla storia del sito, l'economia, la demografia e il ruolo svolto dalla cittadella nella vita dell'intera regione.

The discovery of 17,000 tablets at the mid-third millennium BC site of Ebla in Syria has revolutionized the study of the ancient Near East. This is the first major English-language volume describing the multidisciplinary archaeological research at Ebla. Using an innovative regional landscape approach, the 29 contributions to this expansive volume examine Ebla in its regional context through lenses of archaeological, textual, archaeobiological, archaeometric, geomorphological, and remote sensing analysis. In doing so, they are able to provide us with a detailed picture of the constituent elements and trajectories of early state development at Ebla, essential to those studying the ancient Near East and to other archaeologists, historians, anthropologists, and linguists. This work was made possible by an IDEAS grant from the European Research Council.

This book presents the results of the archaeological activities and specialistic studies carried out at the site of Abu Tbeirah (Nasiriyah, Province of Dhi Qar, southern Iraq) by the Iraqi-Italian joint mission of the Iraqi State Board of Antiquities and Heritage and of Sapienza, led by F. D'Agostino and L. Romano (Dipartimento - Istituto Italiano di Studi Orientali). In the volume the accomplishments of the first seven campaigns (2011-2016) are introduced together with an assessment of the palaeo-environment and landscape surrounding the site. After an introduction to the reasons that led to start the archaeological activities in Abu Tbeirah, written by HE Dr A. Al-Hamdani, Minister of Culture of the Republic of Iraq, the diggings in the south-eastern Area 1 are presented (the cemetery and the other activities identified immediately under the top-soil and the last phase of Building A). A preliminary assessment on the Early-Dynastic III/Akkadian Transition pottery horizon (2450-2150 BC) is presented as well. At the same time, the multifaceted analyses

and studies, carried out on Abu Tbeirah's site and findings, are included in the volume.

More Insights into Laminitis in the Arabian Horse records more than twenty years of on-field practice with Arabian Horses affected by Laminitis either acute and chronic. The approach to both prevention and treatment of this disease is optimistic, the main goal being that of giving the horse the right tools to self-heal as it usually occurs in a natural environment. Many satisfactory answers to most common (and to the least common) queries about laminitis are provided by the author, supported by a considerable statistical success rate.

Southwest Asia is at the epicenter of zooarchaeological research on pivotal changes in human history such as animal domestication and the emergence of social complexity. This volume continues the long tradition of the ASWA conference series in publishing new research results in the zooarchaeology of southwest Asia and adjacent areas. The book is organized in three thematic areas. The first presents new methodological tools and approaches in the study of animal remains exemplified through studies on domestication, butchery practices, microdebris, intrasite contextual comparisons and age-at-death recording. Besides offering interesting insights into our past, these methodological developments enable higher resolution for future research. The second section focuses on the subsistence economies of prehistoric and early complex societies and

provides new insights into how animal management developed in southwest Asia. The third section includes intriguing new research results on the roles of animals in the symbolic world of ancient societies, such as the meaning of insect figures at Gobekli Tepe, animal cults in Egypt, feasting in Iron Age Oman, and the ornithological interpretation of Byzantine mosaics.

Il presente lavoro ha l'ambizione di approfondire, nel quadro regionale, l'aspetto del Neolitico antico nella sua fase terminale. Lo scavo che si è presentato estremamente complesso nella stratigrafia e nelle strutture, ha restituito un fecondo patrimonio fittile, litico e di oggetti d'ornamento; particolarmente ricca è anche la documentazione riguardante il sistema di sussistenza, l'ambiente esterno e i resti funerari umani; grazie alla generosa e paziente opera di molti collaboratori esterni, i quali, pur non partecipando direttamente allo scavo, hanno messo a disposizione la loro esperienza e competenza, è stato possibile affrontare le tematiche relative all'ambiente antico e di dare corpo e conferma alle ipotesi sull'utilizzo della grotta. Ad essi si devono i contributi del volume. All'introduzione geologica fanno seguito una breve storia delle indagini nella grotta e l'illustrazione della stratigrafia e della strutture, quindi gli studi sul materiale fittile, l'industria litica, sui resti archeobotanici, archeozoologici, antropologici e sulle componenti mineralogiche delle ceramiche. La documentazione delle sezioni stratigrafiche maggiormente significative correda il capitolo sulla Morfologia; peraltro senza il paziente e puntuale lavoro di sintesi operato da Nicola Bruni e Anna Riva non sarebbe stato possibile condensare con la necessaria chiarezza le successioni stratigrafiche, avendo a disposizione un numero altissimo di prodotti grafici disparati.

"The method of Formgeschichte seeks to help in answering the historical questions as to the nature and trustworthiness of our knowledge of Jesus, and also in solving a theological problem properly so-called. It shows in what way the earliest testimony about Jesus was interwoven with the earliest testimony about the salvation which had appeared in Jesus Christ. Thereby it attempts to emphasise and illuminate the chief elements of the message upon which Christianity was founded." From the Author's Preface Aply translated by Bertram Lee Woolf, this is the classic exposition of the German school of theology known as Formgeschichte or the criticism of literary form, which through literary and historical analysis seeks to understand the origins of the traditions of the New Testament, and in so doing bring to light the original intentions and interests of those earliest traditions.

Long regarded as biological waste, the placenta is gaining momentum as a viable product for clinical use. Due to their unique properties, placental cells and derivatives show great promise in curing various diseases. Utilizing contributions from world-renowned experts, *Placenta: The Tree of Life* considers the therapeutic potential of these cells. It examines new stem cell-based strategies and highlights recent studies that advance the range of treatment for a number of illnesses. Emphasizing the potential research and therapeutic use of stem cells, the book discusses the development, structure, and functions of the human placenta. It introduces overall aspects of the immune system, explains some of the immune mechanisms during pregnancy, and shows the role of the placenta in these mechanisms. Current scientific research is presented that focuses on the mechanisms of action underlying the therapeutic benefit of cells isolated from different placental regions. An exhaustive examination, this pivotal work: Considers how perinatal cells may represent an important source for cell therapy approaches in the near future, in both human and veterinary medicine Describes the clinical potential of placenta-derived cells in regenerative medicine—specifically in neurological disorders, metabolic liver diseases, inflammatory diseases, and autoimmune diseases Explains how cells isolated from different placental tissues share basic properties *Placenta: The Tree of Life* summarizes the advantages of perinatal tissue as a source of cells with therapeutic potential and is designed for use in the study of genetics, stem cell science, placental function, reproductive

Il volume presenta i risultati di scavi operati negli ultimi quindici anni nel centro storico di Faenza, nel corso dei quali sono stati individuati ventisei butti che hanno restituito dalla terra un ricco repertorio legato a diverse attività artigianali, databili fra XVI e XVIII secolo, che ha costituito una fonte preziosa di dati sia sull'uso che sulla produzione. Precedono l'analisi dei contesti due capitoli che prendono in esame l'argomento dei rifiuti, la loro produzione in rapporto alla città, le modalità del loro smaltimento, da un punto di vista prima generale e poi legato al caso concreto di Faenza. Segue la sezione dedicata ai contesti, ripartiti secondo la loro provenienza sociale e una appendice, con contributi specialistici di vari studiosi che si sono occupati di alcuni particolari aspetti dei butti. È presente anche un intervento relativo alle pratiche di recupero e restauro dei materiali rinvenuti, presentato da un docente dell'Istituto d'Arte Ballardini. Questa scuola ha infatti partecipato con i suoi docenti e allievi al recupero di buona parte dei materiali presentati nel volume e a questa istituzione il volume è dedicato.
