Corporate Finance: The Basics John Wiley & Sons

The future of politics after the pandemic COVID-19 exposed the pre-existing conditions of the current global crisis. Many Western states failed to protect their populations, while others were able to suppress the virus only with sweeping social restrictions. In contrast, many Asian countries were able to make much more precise interventions. Everywhere, lockdown transformed everyday life, introducing an epidemiological view of society based on sensing, modeling, and filtering. What lessons are to be learned? The Revenge of the Real envisions a new positive biopolitics that recognizes that governance is literally a matter of life and death. We are grappling with multiple interconnected dilemmas—climate change, pandemics, the tensions between the individual and society—all of which have to be addressed on a planetary scale. Even when separated, we are still enmeshed. Can the world govern itself differently? What models and philosophies are needed? Bratton argues that instead of thinking of biotechnologies as something imposed on society, we must see them as essential to a politics of infrastructure, knowledge, and direct intervention. In this way, we can build a society based on a new rationality of inclusion, care, and prevention.

As a starting point in planning for a transaction, it is helpful to compute fair market value, which represents a "floor" value for the seller since it by definition represents a value agreed upon by any hypothetical willing and able buyer and seller. But for M&A, it is more important to compute investment value, which is the value of the target company to a strategic buyer (and which can vary with each prospective buyer). Prepare for the sale and acquisition of a firm Identify, quantify, and qualify the synergies that increase value to strategic buyers Get access to new chapters on fairness opinions and professional service firms Find a discussion of Roger Grabowski's writings on cost of capital, cross-border M&A, private cost of capital, intangible capital, and asset vs. stock transactions Inside, all the necessary tools you need to build and measure private company value is just a page away!

Internationalization is a strategic issue for companies as it is today the central axis for the development of small and medium-sized enterprises (SMEs). Market expansion and the growing importance of emerging markets offer new development opportunities for SMEs to use innovative strategies - such as head-deck strategies - to effectively penetrate these markets. This book focuses on understanding these new strategies. Why do SMEs use head-of-bridge strategies in order to internationalize? How do they deploy such strategies abroad? Based on the example of five manufacturing SMEs, which are at different stages of internationalization, this book highlights the main motivations, stages of deployment but also difficulties encountered in this direction. This book is a tool for assessing potential locations and provide managers with a new alternative in terms of internationalization, enabling rapid identification of key stakeholders, adapting their international development plan and anticipating potential pitfalls.
