Work and Energy The Stationery Office

The Committee's report examines science and mathematics teaching in secondary schools in England, focusing on the following issues: the take-up of science and mathematics at GCSE and A-level, the provision of careers advice to students, problems in the recruitment and retention of teachers, the quality of teaching methods and the role of continuing professional development. The Committee finds that effective science teaching in schools is essential, both in order to ensure a satisfactory general level of scientific literacy in society, and to enable the next generation of scientists and engineers to progress into higher education and beyond. It argues that the current examination system forces students to study an excessively narrow range of subjects at too early an age, and it recommends that the Government should reconsider the Tomlinson proposals for a broader diploma-based system for 14-19 year old students based on the International Baccalaureate. This would ensure that students receive a more rounded education and are not made to over-specialise before they are able to see the merits of studying science and mathematics. Concerns are also raised

about the shortage of science teachers, particularly specialist physics and chemistry teachers, the quality of careers advice in schools, and the importance of practical science in schools.

NSA is a comprehensive collection of international nuclear science and technology literature for the period 1948 through 1976, pre-dating the prestigious INIS database, which began in 1970. NSA existed as a printed product (Volumes 1-33) initially, created by DOE's predecessor, the U.S. Atomic Energy Commission (AEC). NSA includes citations to scientific and technical reports from the AEC, the U.S. Energy Research and Development Administration and its contractors, plus other agencies and international organizations, universities, and industrial and research organizations. References to books, conference proceedings, papers, patents, dissertations, engineering drawings, and journal articles from worldwide sources are also included. Abstracts and full text are provided if available.

In 1995, the National Science Foundation (NSF) created a special account to fund large (several tens of millions of dollars) research facilities. Over the years, these facilities have come to represent an

increasingly prominent part of the nation's R&D portfolio. Recently concern has intensified about the way NSF is selecting projects for this account. In 2003, six U.S. Senators including the chair and ranking member of the Senate Subcommittee on VA, HUD, and Independent Agencies Appropriations expressed these concerns in a letter to the NRC asking it to "review the current prioritization process and report to us on how it can be improved." This report presents a series of recommendations on how NSF can improve its priority setting process for large research facilities. While noting that NSF has improved this process, the report states that further strengthening is needed if NSF is to meet future demands for such projects.

This book focuses on current practices in scientific and technical communication, historical aspects, and characteristics and bibliographic control of various forms of scientific and technical literature. It integrates the inventory approach for scientific and technical communication.

Research in Education National Academies Press

Born in 1902, Edward Condon made significant contributions to quantum theoretical physics. Nearly ten years at Princeton University sealed his reputation as a leading figure in the field. Then, in 1937, he gave it all up to pursue an industrial career, first at the Westinghouse Electric and Manufacturing Company, and then, by way of the federal government, the National Bureau of Standards. In a radical departure from professional norms, Condon sought to redefine the relationship between academic science

and technological innovation in industry. He envisioned intimate cooperation with the universities to serve the needs of his employers and also the broader business community. This book explores the birth, life, and death of that vision during the Great Depression, World War II, and the early Cold War. Condon's cooperative model of R&D evolved over time, and by consequence, laid bare sharp disagreements among academic, corporate, and government stakeholders about the practical value of new knowledge, where and how it should be produced, and ultimately, on whose behalf it ought to be put to use.

A Southeastern Supplement to the Union List of Serials Springer Nature

A survey of the state-of-the-art in the evaluation of natural terrain by earth-science techniques and measurement systems is presented in response to a need that existed for many years. This report considers the terrain as an envelope of the environment and all related parameters that are basic in an evaluation for relevant military applications such as unimproved landing areas, trafficability, site selection for operational facilities, terrain reconnaissance and surveillance, and target detection within a masked terrain complex. Methods of terrain-data acquisition, analysis, and evaluation and their limitations are reviewed. The status of research and development, specifying the gaps in technology, is summarized with accompanying conclusions. The report forecasts the requirement for an automated terrain-data acquisition, storage, and display system. Information pertaining to the classification of terrain data, field devices to measure bearing strength, and a visualized optimum remote sensing system is also given in the appendix. A glossary and a

comprehensive bibliography are included. (Author).

Includes Part 1, Number 1 & 2: Books and Pamphlets, Including Serials and Contributions to Periodicals (January - December)

West's Federal Supplement

The Science and Technology Committee warns that the UK's prominence in astronomy and particle physics, and its ability to attract and inspire the next generation of scientists in these areas, could be at risk if reduced budgets hit the UK's growth prospects, reputation and expertise. Although science did relatively well in the recent Spending Review, funding for astronomy sees a total reduction of 21% over the next four years compared with 2010-11. More starkly, comparing 2014/15 with 2005, spending in astronomy and particle physics will be around 50% lower than its level six years ago. This is worrying, particularly when set against the planned increased investment in science and innovation by the UK's international peers as part of long-term strategies to ensure economic growth. The Science and Technology Facilities Council (STFC) - the research council which funds research and facility development in astronomy, particle physics and nuclear physics - is risking the UK's ability to stay at the forefront of future developments by focusing its astronomy and particle physics programmes into fewer areas. A case in point is the UK's planned withdrawal from all Northern Hemisphere optical and ground based astronomical facilities, which could see UK leadership and competitive advantage being handed over to international peers. The Committee is also highly critical of past STFC strategies, especially its failure to

incorporate into policy documents details of the planned withdrawals. The report also addresses the future of the National Schools Observatory and outreach, which is essential to inspire the next generation of scientists.

Status and Plans of the United States and CERN High Energy Physics Programs and the Superconducting Super Collider (SSC)

This book gathers high-quality research papers presented at the 2nd AUE international research conference, AUEIRC 2018, which was organized by the American University in the Emirates, Dubai, and held on November 13th-15th, 2018. The book is broadly divided into two main sections: Sustainability and Smart Business, and Sustainability and Creative Industries. The broad range of topics covered under these sections includes: risk assessment in agriculture, corporate social responsibility and the role of intermediaries, the impact of privatizing health insurance, political events and their effect on foreign currency exchange, the effect of sustainable HR practices on financial performance, sustainability integration in the supply chain and logistics, gender inequality in the MENA economies, the panel data model, the model of sustainable marketing in the era of Industry 4.0, micro-enterprises as a tool for combating unemployment, the impact of financial education and control on financial behavior, measuring financial and asset performance in agricultural firms, a comprehensive strategic approach to sustainability in the UAE, sustainability and project finance, HR analytics, FaD or fashion for organizational sustainability, a conceptual framework of sustainable competitive advantages, psychology of organizational sustainability, Blockchain

technology and sustainability, veganism and sustainability, institution building from an emotional intelligence perspective, sustainable concrete production using CWP, occupants' behavior and energy usage in Emirati houses, the effect of shop lighting on consumer behavior, multimedia applications in digital transformation art, integrating biomimicry principles in sustainable architecture, experimental sustainable practices in fashion education, technology-assisted student-centered learning for civil engineering, and a 10-step design process for architectural design studios. All contributions present high-quality

original research work, findings and lessons learned in practical development.
