Students studying chemistry often struggle with the mole. Counting Moles provides an effective aid to learning by giving clear and confident presentation of the essentials of the mole concept needed by those starting chemistry courses. This user-friendly self-teach e-book is split into six chapters which sequentially introduce

the 'mole calculating frame' to help solve problems. Over 200 fully worked examples are given along with several hundred questions. The mole concept is applied to topics such as relative atomic mass and relative formula mass, percentage composition, empirical and molecular formula. The book also covers concentration, its units, volumetric analysis and the relationship between volume, mass and moles of gases. Counting Moles culminates in you taking a Mole Driving Test. On passing this test, you are issued with a Counting Moles Driving License that will give you all the

confidence required to correctly answer all mole calculations.

This manual contains chemistry laboratory experiments that are adaptable for use by tribal colleges and community colleges. It was created for a two-semester General, Organic, and Biochemistry course sequence at Nebraska's two tribal colleges over a period of four years. While the authors see chemistry everywhere, we developed these connections to tribal community topics to help students to see the chemistry of everyday life and to find intellectual satisfaction and enjoyment

while doing so. The labs can be performed by students alone or in pairs and will require about 2.5 hours to complete if the reagents and materials are ready. All labs have background information, community connections, the lab protocols and procedures, and suggestions for the lab report.

**Chemistry** McGraw-Hill/Glencoe **EXPERIMENTS IN GENERAL CHEMISTRY**, Sixth Edition, has been designed to stimulate curiosity and insight, and to clearly connect lecture and laboratory concepts and techniques. To accomplish this goal, an extensive effort has been made to develop experiments that maximize a discovery-oriented approach and minimize personal hazards and ecological impact. Like earlier editions, the use of chromates, barium, lead, mercury, and nickel salts has been avoided. The absence of these hazardous substances should minimize disposal problems and costs. This lab manual focuses not only on what happens during chemical reactions, but also helps students understand why

chemical reactions occur. The sequence of experiments has been refined to follow topics covered in most general chemistry textbooks. In addition, Murov has included a correlation chart that links the experiments in the manual to the corresponding chapter topics in several Cengage Learning general chemistry titles. Each experiment--framed by pre-and post-laboratory exercises and concluding thought-provoking questions--helps to enhance students' conceptual understanding.
