During the 1920s a new
generation of American
sociologists tried to make
their discipline more
objective by adopting the
methodology of the
natural sciences. Robert
Bannister provides the
first comprehensive
account of the emergence

of this "objectivism"
within the matrix of the
evolutionism of Lester
Ward and other founders
of American sociology.
Objectivism meant
confining inquiry to the
observable externals of
social behavior and
quantifying the results.
Although objectivism was
a marked departure from
the theoretical and
reformist sociology of the
prewar years, and caused
often-fierce
intergenerational
struggle, sociological
objectivism had roots
deep in prewar sociology.
Objectivism first surfaced
in the work of sociology's
"second generation," the
most prominent members
of which completed their
graduate work prior to
World War I. It gradually
took shape in what may
be termed "realist" and
"nominalist" variants, the
first represented by
Luther Lee Bernard and
the second by William F.
Ogburn and F. Stuart
Chapin. For Bernard, a
scientific sociology was
radical, prescribing
absolute standards for
social policy. For Ogburn
and Chapin, it was
essentially statistical and
advisory in the sense that
experts would concern
themselves exclusively
with means rather than
ends. Although the

objectivists differed
among themselves, they
together precipitated
battles within the
American Sociological
Society during the 1930s
that challenged the
monopoly of the Chicago
School, paving the way for
the informal alliance of
Parsonian theorists and a
new generation of
quantifiers that
dominated the profession
throughout the 1950s. By
shedding new light on the
careers of Ward and the
other founders and by
providing original
accounts of the careers of
the leading objectivists,
Bannister presents a
unique look at the course
of sociology before and
after World War I. He puts
theory formation in an
institutional, ideological,
and biographical setting,
and thus offers an
unparalleled look at the
formation of a modern
academic profession.

Group Publishing
Papers in Economics and Sociology is a compilation of materials authored by the Polish economist Oskar Lange. The coverage of the essays covers the interrelations between economic and social issues. The text first covers the Marxist and socialist theory, and then proceeds to tackling political economy and socialism. Next, the selection deals with economic theory, along with the mathematical models, econometrics, and statistics utilized in economic analysis. The text also covers the economic science in the service of practice. The book will be of great use to political scientists, sociologists, behavioral scientists, and economists.

Ideal for instructors and students in a wide range of sociological courses, this guide makes the case that thinking and writing are integrally related and that writing, therefore, exercises the sociological imagination. Written in a clear and conversational style, "A Guide to Writing Sociology Papers" examines a wide range of writing assignments for sociology courses at all levels of the curriculum. Employing a variety of writing samples as a means to illustrate effective writing, this brief and inexpensive text teaches students how to deftly research and write about sociology.

With humor and empathy, Mark Edwards's handbook provides undergraduate and early-career graduate students guidance in sociological writing of all kinds. Writing in Sociology offers unusual approaches to developing ideas into research questions, utilizing research literature, constructing research papers, and completing different kinds of course writing (including case studies, theory papers, and applied social science projects). New chapters in the Second Edition offer insights into giving and receiving effective peer review and presenting qualitative research results. By focusing on how to think about the goals and strategies implicit in each section of a writing project this book provides accessible advice to novice sociological writers. Sociological Papers ...

Social Policy and Sociology explores the relationship between social policy and sociology and covers topics such as social inequities and individual stress in the family cycle. America's youth and their problems are also given attention, along with the

relationship between graduate training and federal funding. Comprised of 24 chapters, this book begins with an assessment of the proper relationship between sociology and public policy, and whether sociologists should become actively engaged in social engineering. Methods of training graduate students for doing policy research are also discussed. Subsequent chapters explore community planning and poverty; policy implications of race relations; formal models as a guide to social policy; and the interrelationships between governmental policy, social structure, and public values. Social problems such as alcoholism and drug addiction are also considered, together with the changing relationship between government support and graduate training. Finally, the what and why of policy research in sociology are examined, and possible changes in graduate training and professional practice in sociology are evaluated. This monograph will be of interest to sociologists as well as social and public policymakers.

From 1915 to 1935 the inventive community of social scientists at the University of Chicago pioneered empirical research and a variety of qualitative and quantitative methods, shaping the future of twentieth-century American sociology and related fields as well. Martin Bulmer's history of the Chicago school of sociology describes the university's role in creating research-based and publication-oriented graduate schools of social science. "This is an important piece of work on the history of sociology, but it is more than merely historical: Martin Bulmer's undertaking is also to explain why historical events occurred as they did, using potentially

general theoretical ideas. He has studied what he sees as the period, from 1915 to 1935, when the 'Chicago School' most flourished, and defines the nature of its achievements and what made them possible . . . It is likely to become the indispensable historical source for its topic."—Jennifer Platt, *Sociology Sociological Papers* Routledge
This book is a study of disciplines and their specialities. It poses sociological questions about the formation of intellectual fields and their social relations, and offers an in-depth, historical study of one of the largest specialities of the discipline of sociology - the sociology of health and medicine - across three countries: the United States of America, Britain and Australia. Employing a radical new theory of disciplines, this book reveals unexpected connections between the ideas of sociologists and the context they work within. It answers questions about where they work, who they cite and collaborate with, and highlights distinct differences in the practice of sociology from one country to the next. In

doing so, this book offers evidence of the effects of sweeping changes to the university sector and the global publishing industry on the working lives of sociologists, not least the impact of commercial research sponsorship on the knowledge they produce.

The papers in this second volume show some of the results of the empirical exploration of Bernstein's hypothesis. The volume represents a significant contribution not only to the study of the sociology of language, but also to education and the social sciences. "This collection demonstrates the magnitude of Bernstein's pioneering contribution to

socio-linguistic studies" - S. John Eggleston, Times Educational Supplement

Originally published in 1973 Knowledge, Education and Cultural Change surveys the present state of the field of the sociology of education. The book addresses the claim that much of the research in the sociology of education should be extended to issues of wider theoretical significance, the book provides theoretically informed analysis of situations or processes, developing new theoretical perspectives and concepts. The papers also reflect the appropriate theoretical framework for the sociology of education. Underpinning this framework, it looks at the importance of social stratification, arguing that too much work in the sociology of education is carried out using oversimplified models.
