In a context of global competition, the optimization of logistics systems is inescapable. Logistics Systems: Design and Optimization falls within this perspective and presents twelve chapters that well illustrate the variety and the complexity of logistics activities. Each chapter is written by recognized researchers who have been commissioned to survey a specific topic or emerging area of logistics. The first chapter, by Riopel, Langevin, and Campbell, develops a framework for the entire book. It classifies logistics decisions and highlights the relevant linkages to logistics decisions. The intricacy of these linkages demonstrates how thoroughly the decisions are interrelated and

underscores the complexity of managing logistics activities. Each of the chapters focus on quantitative methods for the design and optimization of logistics systems.

What is school district master planning? This book explains how this planning is done, using a proven process, not theories. The process helps you avoid cost overruns, public outrage, repeated redistricting, and classrooms built in wrong places that all represent poor planning. Planning tools, steps and process check lists are discussed in rich detail, using actual case studies and the planning triangle of programs, demographics and facilities.

Process roles are explained for district staff, consultants, and the public at each step. Steps are clearly explained for acquiring, analyzing, and applying critical data to drive planning to redistrict, build, close, renovate or expand schools. Steps are carefully explained for developing the comprehensive masterplan and getting it implemented on time and within budget. This book pulls no punches as to what usually goes wrong and why, along with what must be done, step by step, to avoid such mistakes. It is a guide to developing a district master plan that will work out for the long term and promote public support for public education.

Problems in Planning Urban School Facilities Springer Nature

This remarkable volume highlights the importance of Production and Operations Management (POM) as a field of study and research contributing to substantial business and social growth. The editors emphasize how POM works with a range of systems--agriculture, disaster management, e-commerce, healthcare, hospitality, military systems, not-for-profit, retail, sports, sustainability, telecommunications, and transport--and how it contributes to the growth of each. Martin K. Starr and Sushil K. Gupta gather an international team of experts to provide researchers and students with a panoramic vision of the field. Divided into eight parts, the book presents the history of POM, and establishes the foundation upon which POM has been built while also revisiting and revitalizing topics that have long been essential. It examines the significance of processes and projects to the fundamental growth of the POM field. Critical emerging themes and new research are examined with open minds and this is followed by opportunities to interface with other business functions. Finally, the next era is discussed in ways that combine practical skill with philosophy in its analysis of POM, including traditional and nontraditional applications, before concluding with the editors' thoughts on the future of the discipline. Students of POM will find this a comprehensive, definitive resource on the state of the discipline and its future directions.

Family caregiving affects millions of Americans every day, in all walks of life. At least 17.7 million individuals in the United States are caregivers of an older adult with a health or functional limitation. The nation's family caregivers provide the lion's share of long-term care for our older adult population. They are also central to older adults' access to and receipt of health care and community-based social services. Yet the need to recognize and support caregivers is among the least appreciated challenges facing the aging U.S. population. *Families Caring for an Aging America* examines the prevalence and nature of family caregiving of older adults and the available evidence on the effectiveness of programs, supports, and other interventions designed to support family caregivers. This report also assesses and recommends policies to address the needs of family caregivers and to minimize the barriers that they encounter in trying to meet the needs of older adults.

This book covers the entire planning process educators must employ to adequately administer the planning process for a new or renovated school building. The structure of the book is to follow a sequential planning process for a new school building or renovation project from the beginning of a need for a new school to the final evaluation of the planning product and planning process. In addition to complete chapters describing each planning process, there are auxiliary chapters devoted to topics important to the planning process such as Green Schools, Critical Issues, and Safe Buildings. A unique chapter is the last one dealing with Problem-Based Learning. In this chapter problems from actual experience in the field are presented to students for consideration and discussion.

This book presents a structured approach to develop mathematical optimization formulations for several variants of facility layout. The range of layout problems covered includes row layouts, floor layouts, multi-floor layouts, and dynamic layouts. The optimization techniques used to formulate the problems are primarily mixed-integer linear programming, second-order conic programming, and semidefinite programming. The book also covers important practical considerations for solving the formulations. The breadth of approaches presented help the reader to learn how to formulate a variety of problems using mathematical optimization techniques. The book also illustrates the use of layout formulations in selected engineering applications, including manufacturing, building design, automotive, and hospital layout.

Total Facility Management John Wiley & Sons

Earlier editions of Total Facilities Management have been praised for the lucid presentation style and direct applicability of its contents. The third edition follows in that tradition, providing an accessible text bridging the gap between the theory of facilities management and its implementation. This book raises issues which all practitioners should consider before embarking on a particular plan, showing the link between facilities management practice and an organisation's business objectives and dealing with issues known to concern practitioners. Building on the success and popularity of previous editions, the third edition adds new chapters on facilities planning, building intelligence, managing specialist services and information systems management, and provides a number of new, international case studies which will further broaden its appeal to practitioners and advanced students alike. From a Review of the Second Edition: "I have just finished reading this superb book and am impressed with the amount of 'wisdom' provided in a very readable form" —W.W.
