Kumon STEM Missions Workbooks offer students a fun way to practice interdisciplinary topics by combining science, technology, engineering, and math questions in order to strengthen problem-solving skills. In this workbook, your child will complete several STEM "missions" designed to increase his or her critical thinking and problem-solving abilities. Each mission asks your child to read science passages, answer questions about the passages, solve math problems, and use the knowledge gained to create or design a solution (engineering) to a real word problem. Featuring Life Science, Earth Science, and Physical Science topics, these workbooks are sure to get your child interested in the connection between what he or she learns and how it can be applied to the real world.

"Prealgebra is designed to meet scope and sequence requirements for a one-semester prealgebra course. The text introduces the fundamental concepts of algebra while addressing the needs of students with diverse backgrounds and learning styles. Each topic builds upon previously developed material to demonstrate the cohesiveness and structure of mathematics. Prealgebra follows a nontraditional approach in its presentation of content. The beginning, in particular, is presented as a sequence of small steps so that students gain confidence in their ability to succeed in the course. The order of topics was carefully planned to emphasize the logical progression throughout the course and to facilitate a thorough understanding of each concept. As new ideas are presented, they are explicitly related to previous topics."--BC Campus website.
