The trusted, innovative, calibrated leader Unrivaled problems, notable scientific accuracy and currency, and remarkable clarity have made Chemistry: The Central Science the leading general chemistry text for more than a decade. Trusted, innovative, and calibrated, the text increases conceptual understanding and student success in general chemistry by building on the expertise of the dynamic author team of leading researchers and award-winning professors. The new Thirteenth Edition builds on the Twelfth Edition's major revision, in which every word and piece of art was scrutinized by all the authors to increase its effectiveness. Placing a greater emphasis on research, this edition is more tightly integrated with MasteringChemistry, the leading online homework, tutorial, and assessment program—resulting in an unparalleled teaching and learning package that personalizes learning and coaches students toward understanding and mastery of tough chemistry topics. This program presents a better teaching and learning experience—for you and your students. It provides: Enhanced learning from a dynamic author team of leading researchers and award-winning professors: Each member of this well-respected author team brings their expertise in a wide range of areas to the pages of this popular text. All

authors have been active researchers and have taught general chemistry for many years. Improved conceptual understanding through stepped up, relevant pedagogy: Students get numerous opportunities to test their knowledge through Give It Some Thought (GIST) exercises, Go Figure questions, and A Closer Look essays, now integrated with clicker questions and in MasteringChemistry. Invaluable aids that ensure problem-solving success: By using a consistent process, a unique Analyze/Plan/Solve/Check format, dual-column problem-solving approach in certain areas, a new practice exercise following each worked example, and the Strategies in Chemistry feature, students are placed on the right path from the very start to excel at problem solving and comprehension. Clarity through visualization from a variety of perspectives, including macroscopic, microscopic, and symbolic: Included are Visualizing Concepts exercises, with models, graphs, and other visual materials; sample exercises with molecular illustrations; and conceptual questions in the end-of-chapter questions. Superior support beyond the classroom with MasteringChemistry: Students benefit from personalized, interactive learning through MasteringChemistry's self-paced tutorials that guide them through the text's most challenging topics; provide immediate, specific feedback; and keep students engaged and on track. Note: You are purchasing a standalone product; MasteringChemistry does not come packaged with this content. MasteringChemistry is not a self-paced technology and should only be purchased when required by an instructor.

Laboratory Experiments for Advanced Placement Chemistry Pearson

Prepared by John H. Nelson and Kenneth C. Kemp, both of the University of Nevada. This manual contains 43 finely tuned experiments chosen to introduce students to basic lab techniques and to illustrate core chemical principles. You can also customize these labs through Catalyst, our custom database program. For more information, visit <http://www.pearsoncustom.com/custom-library/catalyst> In the Thirteenth Edition, all experiments were carefully edited for accuracy and safety. Pre-labs and questions were revised and several experiments were added or changed. Two of the new experiments have been added to Chapter 11.

"Chemistry: The Central Science is the most trusted book on the market—its scientific accuracy, clarity, innovative pedagogy, functional problem-solving and visuals set this book apart. Brown, LeMay, and Bursten teach students the concepts and skills they need without overcomplicating the subject. A comprehensive media package that works in tandem with the text helps students practice and learn while providing instructors the tools they need to succeed."—Publisher's description.

Symbiogenesis, a term first coined by the Russian botanist K. S. Merezkovsky in the late nineteenth century, is the evolution of new life forms from the physical union of different, once-independent partners. In this book Khakhina traces the development of the concept in Russian and Soviet scientific literature, reviewing the contributions of Merezkovsky, A. S. Famintsyn, B. M. Kozo-Polyansky, and other prominent Russian scientists to theories of the role of symbiosis as a source of evolutionary information. This book provides new information for English-speaking scientists. The evolutionary implications of symbiosis have only recently been acknowledged by western scientists, and the sophisticated analysis by Russian biologists described by Khakhina is largely unknown. Lynn Margulis and Mark McMenamin have written an introduction to Khakhina's book (Published in the Soviet Union in 1979). The appendix by Donna C. Mehos describes the American anatomist Ivan E. Wallin, whose theory of symbiogenesis - species origin by the acquisition of microbial symbionts - was definitively rejected by his peers. The book is essential for anyone wishing to understand a topic of overwhelming importance for evolutionary biology and the history of science.

Every year at the High-level Political Forum, an annual theme helps an increased focus along with an in-depth review of a selection of Sustainable Development Goals (SDGs). In 2018, SDG 6 on water and sanitation is one of the goals to be reviewed. To provide input to Member States on this goal, UN-Water has produced the SDG 6 Synthesis Report 2018 on Water and Sanitation. This represents a joint position from the UN family on the global status on SDG 6 and other water-related targets. The report also explores the linkages within SDG 6 targets and the interlinkages between SDG 6 and the other targets and indicators. The report builds on the baseline data on SDG 6 global indicators coming from JMP, GEMI and GLAAS.

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand—and apply—key concepts.

REA's Crash Course for the AP® Chemistry Exam - Gets You a Higher Advanced Placement® Score in Less Time Crash Course is perfect for the time-crunched student, the last-minute studier, or anyone who wants a refresher on the subject. Are you crunched for time? Have you started studying for your Advanced Placement® Chemistry exam yet? How will you memorize everything you need to know before the test? Do you wish there was a fast and easy way to study for the exam AND boost your score? If this sounds like you, don't panic. REA's Crash Course for AP® Chemistry is just what you need. Our Crash Course gives you: Targeted, Focused Review - Study Only What You Need to Know Fully revised for the 2014 AP® Chemistry exam, this Crash Course is based on an in-depth analysis of the revised AP® Chemistry course description outline and sample AP® test questions. It covers only the information tested on the new exam, so you can make the most of your valuable study time. Our targeted review focuses on the Big Ideas that will be covered on the exam. Explanations of the AP® Chemistry Labs are also included. Expert Test-taking Strategies This Crash Course presents detailed, question-level strategies for answering both the multiple-choice and essay questions. By following this advice, you can boost your score in every section of the test. Take REA's Online Practice Exam After studying the material in the Crash Course, go to the online REA Study Center and test what you've learned. Our practice exam features timed testing, detailed explanations of answers, and automatic scoring analysis. The exam is balanced to include every topic and type of question found on the actual AP® exam, so you know you're studying the smart way. Whether you're cramming for the test at the last minute, looking for extra review, or want to study on your own in preparation for the exams - this is the study guide every AP® Chemistry student must have. When it's crucial crunch time and your Advanced Placement® exam is just around the corner, you need REA's Crash Course for AP® Chemistry! About the Author Adrian Dingle is a chemistry educator and author, with 24 years of experience teaching in the United States and the United Kingdom. He is the creator of the award-winning chemistry website, www.adriandingleschemistrypages.com. The focus of Mr. Dingle's teaching career has been on preparing students for standardized tests; AP® and SAT® tests in the United States, GCSE's and A levels in the United Kingdom, and International Baccalaureate in both countries. An Englishman, he lives in Atlanta, Georgia, where he teaches at The

Westminster Schools. He holds a B.Sc. (Hons.) Chemistry, and a Postgraduate Certificate in Education, both from the University of Exeter in England. In addition to writing this Crash Course, Mr. Dingle has written The Periodic Table: Elements With Style, How To Make A Universe With 92 Ingredients, and SAT™ Chemistry Crash Course. He is the 2011 winner of the School Library Association of the UK's Information Book Award, and, in 2012, was honored with the prestigious literary prize Wissenschaftsbuch des Jahre, sponsored by the Austrian Ministry of Science and Research.
