Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the

art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.

Participatory Budgeting—the experiment in democracy that could redefine how public budgets are decided in the United States. Democracy Reinvented is the first comprehensive academic treatment of participatory budgeting in the United States, situating it within a broader trend of civic technology and innovation. This global phenomenon, which has been called "revolutionary civics in action" by the New York Times, started in Brazil in 1989 but came to America only in 2009. Participatory budgeting empowers citizens to identify community needs, work with elected officials to craft budget proposals, and vote on how to spend public funds. Democracy Reinvented places participatory budgeting within the larger discussion of the health of U.S. democracy and focuses on the enabling political and institutional conditions. Author and former White House policy adviser Hollie Russon Gilman presents theoretical insights, indepth case studies, and interviews to offer a compelling alternative to the current citizen disaffection and mistrust of government. She offers policy recommendations on how to tap online tools and other technological and civic innovations to promote more inclusive governance. While most literature tends to focus on institutional changes without solutions, this book suggests practical ways to empower citizens to become change agents. Reinvesting in Democracy also includes a discussion on the challenges and opportunities that come with using digital tools to re-engage citizens in governance.

This comprehensive resource provides readers with the tools necessary to perform analysis of various waveforms for use in radar systems. It provides information about how to produce synthetic aperture (SAR) images by giving a tomographic formulation and implementation for SAR imaging.

Tracking filter fundamentals, and each parameter associated with the filter and how each affects tracking performance are also presented. Various radar cross section measurement techniques are covered, along with waveform selection analysis through the study of the ambiguity function for each particular waveform from simple linear frequency modulation (LFM) waveforms to more complicated coded waveforms. The text includes the Python tool suite, which allows the reader to analyze and predict radar performance for various scenarios and applications. Also provided are MATLAB® scripts corresponding to the Python tools. The software includes a user-friendly graphical user interface (GUI) that provides visualizations of the concepts being covered. Users have full access to both the Python and MATLAB source code to modify for their application. With examples using the tool suite are given at the end of each chapter, this text gives readers a clear understanding of how important target scattering is in areas of target detection, target tracking, pulse integration, and target discrimination.
