"A lovely, big-hearted book...brimming with compassion and the tales of the many, many humans who devote their days to

making animals well" (The New York Times).

Have you ever wondered if your dog might be a bit depressed? How about

heartbroken or homesick? Animal

Madness takes these questions seriously,

exploring the topic of mental health and

recovery in the animal kingdom and turning

up lessons that

Publishers Weekly calls "Illuminating...Braitma

n's delightful balance of humor and

poignancy brings each

case of life....[Animal

Madness's] continuous

dose of hope should

prove medicinal for

humans and animals

alike." Susan Orlean

calls Animal Madness

"a marvelous, smart,

eloquent book—as

much about human

emotion as it is about

animals and their inner

lives.” It is “a gem...that can teach us much about the wildness of our own minds” (Psychology Today).

Sacrifice: Elementals 5

Allyn & Bacon

With contributions from

a team of leading

experts, this volume

provides a

comprehensive survey of recent achievements in our scientific understanding of evolution. The questions it asks concern the beginnings of the universe, the origin of life and the chances of its arising at all, the role of contingency, and the search for universal features in the plethora of evolutionary phenomena. Rather than oversimplified or premature answers, the chapters provide a clear picture of how these essential problems are being tackled, enabling the reader to understand current thinking and open questions. The tools employed stem from a range of disciplines including mathematics, physics, biochemistry and cell biology. Self-

organization as an overarching concept is demonstrated in the most diverse areas: from galaxy formation in the universe to spindle and aster formation in the cell. Chemical master equations, population dynamics, and evolutionary game theory are presented as suitable frameworks for understanding the universal mechanisms and organizational principles observed in a wide range of living units, ranging from cells to societies. This book will provide engaging reading and food for thought for all those seeking a deeper understanding of the science of evolution.

A New Pocket Dictionary of the Portuguese and English Languages
... W. W. Norton

Earth, Fire. Air. Water. One misstep and they lose it all. For the last time. Michael Merrick understands pressure. He's the only parent his three brothers have had for years. His power to control Earth could kill someone if he miscalculates. Now an Elemental Guide has it in for his family, and he's all that stands in the way. His girlfriend, Hannah, understands pressure too. She's got a child of her own, and a job as a firefighter that could put her life in danger at any moment. But there are people who have had enough of Michael's defiance, his family's 'bad luck'. Before he knows it, Michael's enemies have turned

into the Merricks' enemies, and they're armed for war. They're not interested in surrender. But Michael isn't the white flag type anyway. Everything is set for the final showdown. Four elements, one family. Will they hold together, or be torn apart?
