Forty-seven articles represent most of the papers presented at the annual meeting of the Soil Conservation Society of America. The conference addressed the facts and values from economics, ethics, and ecology as they pertain to critical issues in land and water conservation in North America. Part I includes discussions of economic realities, ethical perspectives, and sustained use of natural resources. A number of prominent natural resource leaders then look closely at three issues confronting North American nations: land planning (Part II), water management (Part III), and the

implications of energy development for land and water (Part IV). Each part includes the summary of a roundtable discussion that involved meeting registrants. Part V reports on five major resource-oriented assessments sponsored by the U.S. government and presents futurist Robert Theobald's ideas about what natural resource professionals can do to influence the course of political events. Parts VI through XI consist of papers that discuss a number of current resource issues in the context of economic realities, ethical values, and ecological principles. (Author/DC)

Critical animal studies is increasingly interfacing with tourism research in an effort to shed light on the various ways animals are incorporated into touristic experience. Exploring non-human work in tourism: From beasts of burden to animal ambassadors builds upon the theoretical connections of animal ethics, agency, and welfare as it foregrounds specifically the work that animals perform in the industry. While some types of animal labor are more readily identified, readers of this volume may be surprised by how many forms of animal labor are overlooked. Taking a widely international perspective, with cases from the Arctic, China, Costa Rica, China, Finland, Greece, Mexico, New Zealand, and the United Kingdom, this volume offers readers diverse scenarios of animals working. The book is arranged along three themes of work. Performative work focuses on the animals whose performances are front and center of tourists' motivations and experiences. Value-added work turns attention to the co-working relationships of animals, while the political work of animals as ambassadors and icons is examined within the chapters on hidden labor. Additionally, the book makes theoretical considerations of the implications of positioning animals as workers and offers reflections on ways this focus on working animals extends current scholarship in the field.
