Technology stimulates minds in ways that make a profound and lasting difference, especially in the classroom. It can be used to adapt curriculum to diverse learners or to express material in ways not possible prior to the creation of new technologies. Learning Tools and Teaching Applications through ICT Advancements provides research regarding introducing, collaborating, analyzing, synthesizing, and evaluating innovative contributions to the theory, practice, and research of technology education applicable to K-12 education, higher education, and corporate and proprietary education. It grows this body of research, proposing new applications of technology for teaching and learning, and documenting those practices that contribute irrefutable verification of information technology education as a discipline.

Taking a holistic approach to developmental reading, CONNECT: COLLEGE READING is an intermediate level book for reading levels 8-10. CONNECT strives to build students' confidence by showing them that many of the skills needed to become stronger

readers are skills they already possess and use on a daily basis. Using popular media as a springboard, Dole and Taggart show students how thinking skills used while watching television or movies can easily transfer to reading. CONNECT's comprehensive approach includes extensive vocabulary coverage, critical thinking practice throughout, and textbook readings in every chapter to help students master college reading. The second edition includes a full chapter on inferences, enhanced coverage of main idea, and guides for specialized reading situations such as reading visuals, novels, and a guide to taking tests. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Quick, Practical Solutions for Assessment and Management Princeton Review

Cryptography lies at the heart of most technologies deployed today for secure communications. At the same time, mathematics lies at the heart of cryptography, as cryptographic constructions are based on algebraic scenarios ruled by group or number theoretical laws. Understanding the involved algebraic structures is, thus, essential to design robust cryptographic schemes. This Special Issue is concerned with the interplay between group theory, symmetry and cryptography. The book highlights four exciting areas of research in which these fields intertwine: post-quantum cryptography, coding theory, computational group theory and symmetric cryptography. The articles presented demonstrate the relevance of rigorously analyzing the computational hardness of the mathematical problems used as a base for cryptographic constructions. For instance, decoding problems related to algebraic codes and

rewriting problems in non-abelian groups are explored with cryptographic applications in mind. New results on the algebraic properties or symmetric cryptographic tools are also presented, moving ahead in the understanding of their security properties. In addition, post-quantum constructions for digital signatures and key exchange are explored in this Special Issue, exemplifying how (and how not) group theory may be used for developing robust cryptographic tools to withstand quantum attacks.

Primary care physicians know from experience how many patients come to them needing help with anxiety and related disorders: these disorders have a lifetime prevalence rate of 30%, but they often seem to be present in a much higher proportion of primary care visits. Time pressure challenges every primary care provider who responds to these disorders. The Primary Care Toolkit for Anxiety and Related Disorders—carefully aligned with the DSM-5—gives you the tools to help you treat your patients promptly and effectively. Quickly find the information and strategies you need using summaries of diagnostic criteria and pharmacological therapies, severity assessments, treatment summaries, and case studies. Efficiently screen, diagnose, and manage common anxiety and related disorders, using visit-by-visit guides for mild, moderate, and severe disorders. An accompanying CD puts the best, most effective diagnostic tools at your fingertips, ready to be printed and used by you and your patients: patient self-report forms and questionnaires, symptom checklists, functional impairment assessment scales, and more. The Primary Care Toolkit helps

prepare you for the 7 anxiety and related disorders that primary care physicians see most often: Generalized anxiety disorder, Panic disorder, Agoraphobia, Social anxiety disorder, Obsessive-compulsive disorder, Posttraumatic stress disorder, Adjustment disorder. Whether you are a family physician, an ER doctor, a pharmacist, a nurse or nurse practitioner, or a medical student, the information and resources in The Primary Care Toolkit for Anxiety and Related Disorders will add to your clinical primary care knowledge and skills.
