BIOCHEMISTRY Oswaal  
Books

In this book, four new  
sections have been added  
in this edition containing  
multiple choice questions  
(MCQs), problem oriented  
case studies, very short  
question with answer and  
Biochemistry course  
curriculum of different  
Universities. MCQ will  
definitely be useful to the  
students appearing for PG  
entrance examinations

later. Problems relating to  
biochemical case studies  
have recently been  
introduced in question  
papers of many medical  
universities and in this  
context, these will be of  
immense help to the  
students for diagnostics  
analysis. In this new  
edition very recent  
questions have been  
incorporated, some short  
questions with answers  
and new case history are  
added. Guide line of  
Medical Council of India  
(MCI) for Biochemistry  
course curriculum is  
appended, so the

students will be aware about the must know and desirable to know area in the subject. Through separate chapters have been earmarked for paper I & II in the courses of study of different Universities, sometimes the question setters do not strictly adhere to the instructions laid down in it, while setting questions. Although it happens occasionally the students have to bear this anomaly as there is no remedy for it.

Features clinical case studies, MCQs, short questions, essays and viva voce questions for revision. *Multiple Choice Questions in Biochemistry* CHANGDER OUTLINE

Biochemistry laboratory manual for undergraduates – an inquiry based approach by Gerczei and Pattison is the first textbook on the market that uses a highly relevant model, antibiotic resistance, to teach seminal topics of biochemistry and molecular biology while incorporating the blossoming field of bioinformatics. The novelty of this manual is the incorporation of a student-driven real real-life research project into the undergraduate

curriculum. Since students test their own mutant design, even the most experienced students remain engaged with the process, while the less experienced ones get their first taste of biochemistry research. Inclusion of a research project does not entail a limitation: this manual includes all classic biochemistry techniques such as HPLC or enzyme kinetics and is complete with numerous problem sets relating to each topic.

**Book** Princeton Review Biochemistry is a major new textbook designed and created specifically for briefer courses in the subject. Written by Prof. Terry Brown of the University of Manchester (author of Genomes and Gene Cloning), the book provides the necessary detail and rigour expected for these courses, but without the extraneous material found in the larger textbooks. With an increasing number of

students taking a short course in biochemistry there is a growing need for a book that covers the subject concisely and succinctly. Biochemistry has been designed from the outset for these shorter courses; it is not a cut-down version of one of the larger books that dominate the market. Although it is shorter, there is no compromise in content, style and coverage. The book is attractively designed in full colour throughout with all the pedagogical features expected in a

major textbook. It covers what students should be expected to know and is written in the clear and accurate writing style for which Terry Brown is widely lauded. With its competitive price and resources for adopting lecturers (all of the illustrations and diagrams from the book, and answers to the end of chapter questions), Biochemistry will become the textbook of choice for any brief biochemistry course. Confirmed Adoptions Biochemistry is already the required text
