Endorsed by the Chartered Banker Institute as core reading for its professional qualifications, *Culture, Conduct and Ethics in Banking* emphasizes the importance of professionalism for banks, and explores how all staff play a key role in putting customers at the heart of their business. Taking an applied approach, it aims to develop the reader's capability to: recognize and contribute towards balanced outcomes for consumers and organizations; understand the impact of reputational deficit; and understand the personal impact of an individual in the workplace. From a discussion of the main branches of ethical thinking to an overview of regulation and legislation in the UK and internationally, this book covers the theory and practice of conduct and professionalism in banking. Chapters contain activities and industry case studies, and further reading and viewing suggestions are included to help develop a deeper understanding of the topics covered. With fully referenced discussion of conflicts of interest, decision making models, the role of professional bodies, corporate governance, conduct risk management and the Global Financial Crisis 2007-08, *Culture, Conduct and Ethics in Banking* is the essential guide for finance professionals.

**Human Factors in Healthcare** Van Haren

There is much industry guidance on implementing engineering projects and a similar amount of guidance on Process Safety Management (PSM). However, there is a gap in transferring the key deliverables from the engineering group to the operations group, where PSM is implemented. This book provides the engineering and process safety deliverables for each project phase along with the impacts to the project budget, timeline and the safety and operability of the delivered equipment.

In crisis management operations, strategic errors can cost lives. Some international organizations (IOs) learn from these failures whereas others tend to repeat them. Given that they have high rates of turnover, how is it possible that any IO retains knowledge about the past? This book introduces an argument for how and why IOs develop institutional memory from their efforts to manage crises. Findings indicate that the design of an IO's learning infrastructure (e.g. lessons learned offices and databases) can inadvertently disincentivize IO elites from using it to share knowledge about strategic errors. Elites - high-level officials in IOs - perceive reporting to be a risky endeavour. In response, they develop institutional memory by creating and using informal processes, including transnational interpersonal networks, private documentation and conversations during crisis management exercises. The result is an institutional memory that is highly dependent on only a handful of individuals. The book draws on the author's interviews and a survey experiment with 120 NATO elites across four countries. Cases of NATO crisis management in Afghanistan, Libya and Ukraine further illustrate the development of institutional memory. Findings challenge existing research on organizational learning by suggesting that formal learning processes alone are insufficient for ensuring that learning happens. The book also offers recommendations to policymakers for strengthening the learning capacity of IOs.

The first edition of the Code of Practice for Project Management for Construction and Development, published in 1992, was groundbreaking in many ways. Now in its fifth edition, prepared by a multi-institute task force coordinated by the CIOB and including representatives from RICS, RIBA, ICE, APM and CIC, it continues to be the authoritative guide and reference to the principles and practice of project management in construction and development. Good project management in construction relies on balancing the key constraints of time, quality and cost in the context of building functionality and the requirements for sustainability within the built environment. Thoroughly updated and restructured to reflect the challenges that the industry faces today, this edition continues to drive forward the practice of construction project management. The principles of strategic planning, detailed programming and monitoring, resource allocation and effective risk management, widely used on projects of all sizes and complexity, are all fully covered. The integration of Building Information Modelling at each stage of the project life is a feature of this edition. In addition, the impact of trends and developments such as the internationalisation of construction projects and the drive for sustainability are discussed in context. Code of Practice will be of particular value to clients, project management professionals and students of construction, as well as to the wider construction and development industries. Much of the information will also be relevant to project management professionals operating in other commercial spheres.

This revised edition is the first text book in English specially developed for training for IPMA-D and IPMA-C exams. In this 3rd edition, the text has been restructured to better align the content with the order of the competence elements in the ICB version 3, divided into Technical competences, Behavioral competences and Contextual competences. For this reason it has been improved as a study book for everyone studying for the IPMA-D and IPMA-C exams. Besides that it is a extremely rich source book for those project managers that have committed themselves to a lifelong professional development. In addition, the book had to be applicable to groups of project managers originating from diverse cultures. For this reason, this is not a book that tells how a Westerner must behave in an Arab or an Asian country, but one that looks at the different subjects covered in the ICB, as seen from diverse cultural standpoints. Each chapter is based on the same structure: Definitions, Introduction, Process Steps, Process steps, Special topics. Text boxes, additional to the main text, give additional explanation to the main text. An elaborate Index of terms allows that this book can be used as the information source to all aspects of project management. This book outlines the structure and activities of companies in the European aviation industry. The focus is on the design, production and maintenance of components, assemblies, engines and the aircraft itself. In contrast to other industries, the technical aviation industry is subject to many specifics, since its activities are highly regulated by the European Aviation Safety Agency (EASA), the National Aviation Authorities and by the aviation industry standard EN 9100. These regulations can influence the companies' organization, personnel qualification, quality management systems, as well as the provision of products and services. This book gives the reader a deeper, up-to-date insight into today's quality and safety requirements for the modern aviation industry. Aviation-specific interfaces and procedures are looked at from both the aviation legislation standpoint as well as from a practical operational perspective.
