CHRISTENSEN CARLY

Applied Statistics for Business and Economics McGraw-Hill Higher Education

"Statistics for Business and Economics" is designed to show readers how to become producers of statistical analysis, which will help them make decisions and become better consumers of information. This text explores essential statistical techniques, including data collection, simple graphic and numeric statistical procedures, probability, hypothesis testing, and regression. The authors use real-world data throughout the book to give students a realistic appreciation of the value of data analysis in today's marketplace. Each chapter includes a summary of terms and

chapter exercises that encourage students to think critically about the concepts presented in the chapter. This text is ideal for instructors looking for a simple and concise approach to teaching introductory business and economics statistics courses. Stuart C. Strother, PhD, is professor of economics at Azusa Pacific University. Prior to academia, he worked in telecommunications and was in the U.S. Army. His research and writing focuses on urban economic development, and international business in China. Professor Strother earned his doctorate in Urban and Public Affairs at the University of Louisville in 2004 and his Master of Business Administration degree at Indiana Wesleyan University in 2000. Orlando Griego, PhD, is a professor, former Air Force officer, and previous Associate Dean at Azusa Pacific University. He has co-authored two books on SPSS and publishes in the area of management, research design, and organizational

development. Professor Griego earned his doctorate in Human Resource Development at Colorado State University in 1997 and his MS in Human Resource Management, Golden Gate University in 1985.

Finally a statistics text that not only does a great job covering statistical tools but also focuses on software and the use of the internet for statistical work! Unlike most current texts which merely add screen shots, the Kohler text has been designed around the integration of popular statistical software and the use of the internet so that readers receive thorough preparation with these tools. The book also provides a great deal of flexibility for designing your course sequence through its applications approach where students will learn when to use certain techniques and how to interpret results to help in decision making, its modern approach giving a thorough integration of computer use, and a modular writing style.

"This twelfth edition of Statistics for Business and Economics is an introductory text emphasizing inference, with extensive coverage of data collection and analysis as needed to evaluate the reported results of statistical studies and make good decisions. As in earlier editions, the text stresses the development of statistical thinking, the assessment of credibility, and the value of

the inferences made from data, both by those who consume and those who produce them. It assumes a mathematical background of basic algebra." --xi (Preface).
