NATO Small Arms Ammunition Standardization Future Small Arms Ammunition Design Future Small Arms & Ammunition Design: Bullet Shape and Barrel Length © Anthony G Williams N.B. versions of this presentation were given to several meetings in 2014/15. The slides included here were those shown at the NDIA Small Arms Forum in June 2015. Future Small Arms & Ammunition Design: Bullet Shape and ... BULLET DESIGN: good FF = longer range or smaller ammo BARREL LENGTH: long barrel = smaller ammunition COMBINED: long barrel + good FF = much smaller ammo GUN CONFIGURATION: bullpup = long barrel in short gun FUTURE SMALL ARMS & AMMUNITION DESIGN It is therefore in the interests of the UK to agree as soon as possible with Canada, Germany, France and any other NATO countries, their basic Future NATO Small arms Ammunition (FNSA) Design Requirement. They should then use every ounce of their collective influence to persuade the USA to base their developments on their jointly agreed requirement. Guest Post - Future Small Arms - Think Defence Title: Future Small Arms Ammunition Design Bullet Shape And Author: Jessica Schulze Subject: Future Small Arms Ammunition Design Bullet Shape And Future Small Arms Ammunition Design Bullet Shape And Regarding NATO standardization of a future US small arms caliber, it is unlikely that there would be major obstacles to implementing a future ammunition STANAG with more specific technical specifications than those found in STANAG 4172. NATO Small Arms Ammunition Standardization DSIAC was tasked with determining and summarizing research being done with materials and/or design features to improve the lethality of future small arms ammunition. DSIAC performed searches within the Defense Technical Information Center Research and Engineering Gateway and other sources, though very little information was found in the unclassified domain. Lethality of Future Small Arms Ammunition - DSIAC The cased telescope technology developed by Textron Systems, promises to bring small arms ammunition into the 21st Century. Size comparison of brass and cased telescoped rounds. Is this the Future of Military Small Arms? As part of its Small Arms Ammunition Configuration (SAAC) study completed in 2017, the US Army decided to pursue an 'intermediate' ammunition measuring 6.8mm. "That was the right calibre to go

to, especially considering I wasn't going to do a commercial off the shelf cartridge," explained Easlick. "6.8mm made the most sense." Future military rifles: alternative small arms ... The original version of this article appeared in the Winter 2011 issue of the Small Arms Defense Journal and in the 1st Quarter 2012 issue of Small Arms Review Last amended September 2012 Combat experience in Afghanistan is leading to some rapid changes in the small arms and ammunition carried by ISAF foot soldiers; and most especially by the US Army, USMC and the British Army and Royal Marines. Small Arms Ammunition refers to a complete round/cartridge or its components, including bullets or projectiles, cartridge cases, primers/caps and propellants that are used in small arms. Small Arms Ammunition is primarily

cartridge-based. BSS Materiel Limited | Ammunition The 4.73 × 33 mm caseless ammunition used in the Heckler & Koch G11 rifle, shown disassembled. The components are, from left to right, the solid propellant, the booster, the bullet, and a plastic cap that serves to keep the bullet centered in the propellant block. Caseless ammunition is a type of small arms ammunition that eliminates the cartridge case that typically holds the primer, propellant, and projectile together as a unit. Caseless ammunition - Wikipedia The Lightweight Small Arms Technologies program is funded by the U.S. Joint Service Small Arms Program, with the goal of significantly reducing the weight of small arms and their ammunition. Following a series of military programs to investigate advances in small arms, the LSAT program is the US military's latest project to replace existing US small arms. Tactical concepts and the research from the previous small arms programs indicates that lightening small arms is the first significant step to

Future Small Arms Ammunition Design Bullet Shape And

Regarding NATO standardization of a future US small arms caliber, it is unlikely that there would be major obstacles to implementing a future ammunition STANAG with more specific technical specifications than those found in STANAG 4172.

Is this the Future of Military Small Arms?

It is therefore in the interests of the UK to agree as soon as possible with Canada, Germany, France and any other NATO countries, their basic Future NATO Small arms Ammunition (FNSA) Design Requirement. They should then use every ounce of their collective influence to persuade the USA to base their developments on their jointly agreed requirement.

Lethality of Future Small Arms Ammunition - DSIAC

BULLET DESIGN: good FF = longer range or smaller ammo
BARREL LENGTH: long barrel = smaller ammunition COMBINED:
long barrel + good FF = much smaller ammo GUN
CONFIGURATION: bullpup = long barrel in short gun

Future military rifles: alternative small arms ...

DSIAC was tasked with determining and summarizing research being done with materials and/or design features to improve the lethality of future small arms ammunition. DSIAC performed searches within the Defense Technical Information Center Research and Engineering Gateway and other sources, though very little information was found in the unclassified domain.
