Princeton University Press  
Fiona Stafford offers intimate, detailed explorations of seventeen common trees, from ash and apple to pine, oak, cypress, and willow. Stafford discusses practical uses of wood past and present, tree diseases and environmental threats, and trees' potential contributions toward slowing global climate change

### Plant Genetic

Conservation John Wiley & Sons

"Every year between 250 000 and 500 000 people suffer a spinal cord injury, with road traffic crashes, falls and violence as the three leading causes.

People with spinal cord injury are two to five times more likely to die prematurely. They also have lower rates of school enrollment and economic participation than people without such injuries.

Spinal cord injury has costly consequences for the individual and society, but it is preventable, survivable and need not preclude good health and social inclusion. Ensuring an adequate medical and rehabilitation response, followed by supportive services and accessible environments, can help minimize the disruption to people with spinal cord injury and their families.

The aims of International perspectives on spinal cord injury are to: -- assemble and summarize information on spinal cord injury, in particular the epidemiology, services, interventions and policies that are relevant, together with the lived experience of people with spinal cord injury; --make recommendations for actions based on this

evidence that are consistent with the aspirations for people with disabilities as expressed in the Convention on the Rights of Persons with Disabilities.

Benjamin MacQueen

presents an innovative

and in-depth look at

contemporary conflict

resolution in the Arab

Middle East, developing a

unique theory of political

culture through his

analysis of peace

processes in Lebanon and

Algeria. Moving beyond

conventional

perspectives, Political

Culture and Conflict

Resolution in the Arab

World highlights that

while culture can serve as

a key to resolving and

transforming conflict, if

neglected, it can act to

worsen the conditions

that lead to conflict. This

book represents a critical

advance in the study of

conflict and its resolution

in the Arab World.

InterVarsity Press

Emilio Sereni's classic work is now available in an English language edition. *History of the Italian Agricultural Landscape* is a synthesis of the agricultural history of Italy in its economic, social, and ecological context, from antiquity to the mid-twentieth century. From his perspective in the Italian tradition of cultural Marxism, Sereni guides the reader through the millennial changes that have affected the agriculture and ecology of the regions of Italy, as well as through the successes and failures of farmers and technicians in antiquity, the middle ages, the Renaissance, and the Industrial Revolution. In this sweeping historical survey, he describes attempts by successive generations to adapt Italy's natural environment for the purposes of agriculture and to respond to its changing ecological problems. *History of the Italian Agricultural Landscape* first appeared

in 1961. At the time of its publication it was a pathbreaking work, parallel in its importance for Italy to Marc Bloc's masterwork of 1931, *The Original Characteristics of French Rural History*. Sereni invented the concept of the historical "agricultural landscape": an interdisciplinary characterization of rural life involving economic and social history, linguistics, archeology, art history, and ecological studies. Originally published in 1997. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905. **History of the Italian Agricultural Landscape** Univ of California Press In March 1988, an international workshop on

intersections without traffic signals was held at the Ruhr-University in Bochum, Germany. The proceedings of this workshop were published by Springer 1). The workshop was performed in a very harmonious atmosphere, which stimulated the experts from different countries to communicate and exchange their ideas and experiences. The presentations and the written contributions documented the present state of technical solutions for design and engineering of unsignalized intersections both regarding scientific research and practical applications. Moreover, numerous unsolved problems were identified. Thus, the 1988 workshop stimulated new developments in the field of unsignalized intersections in several countries. In the meantime, these investigations have led to a remarkable progress. For example in Germany a new guideline for unsignalized cross intersections and T-junctions has been finished and is going to be introduced in 1991. New results on roundabout capacity have been worked out as well. Many

particularly important developments were made in foreign countries. Especially in the United States, an increasing interest in this subject can be observed. In the annual meetings of the TRB, this item received great attention. Many research institutes in North America have concentrated their activities on that point. A new TRB-circular concerning unsignalized intersections is going to be published. It will contain a new procedure for four-way-stop-control intersections, which seems to be a special feature of North American traffic engineering. However, new results from the US for two-way-stop control intersections are available as well.

**ISS 3 Political Culture and Conflict Resolution in the Arab World** CRC Press/ Llc

A contemporary view of the effects of wood, as used for building and fuel, and of deforestation on the development of civilization. Until the ascendancy of fossil fuels, wood has been the principal fuel and building material from the dawn of civilization. Its abundance or scarcity greatly shaped, as A Forest Journey ably relates, the

culture, demographics, economy, internal and external politics, and technology of successive societies over the millennia. The book's comprehensive coverage of the major role forests have played in human life—told with grace, fluency, imagination, and humor—gained it recognition as a Harvard Classic in Science and World History and as one of Harvard's "One-Hundred Great Books." Others receiving the honor include such luminaries as Stephen Jay Gould and E. O. Wilson. This new paperback edition will add a prologue and an epilogue to reflect the current situation in which forests have become imperative for humanity's survival.

Springer Science & Business Media  
The olive (*Olea europaea*) is increasingly recognized as a crop of great economic and health importance world-wide. Olive growing in Italy is very important, but there is still a high degree of confusion regarding the genetic identity of cultivars. This book is a source of recently accumulated information

on olive trees and on olive oil industry. The objective of this book is to provide knowledge which is appropriate for students, scientists, both experienced and inexperienced horticulturists and, in general, for anyone wishing to acquire knowledge and experience of olive cultivation to increase productivity and improve product quality. The book is divided into two parts: I) the olive cultivation, table olive and olive oil industry in Italy and II) Italian catalogue of olive varieties. All chapters have been written by renowned professionals working on olive cultivation, table olives and olive oil production and related disciplines. Part I covers all aspects of olive fruit production, from site selection, recommended varieties, pest and disease control, to primary and secondary processing. Part II contains the chapter on the description of Italian olive varieties. It is well illustrated and includes 200 elaiographic cards with colour photos, graphs and tables.

L'Agricoltura italiana Mohr Siebeck  
Plant diversity sustains all animal life, and the

genetic diversity within plants underpins global food security. This text provides a practical and theoretical introduction to the strategies and actions to adopt for conserving plant genetic variation, as well as explaining how humans can exploit this diversity for sustainable development. Notably readable, it initially offers current knowledge on the characterization and evaluation of plant genetic resources. The authors then discuss strategies from in situ and ex situ conservation to crop breeding, exploring how these can be used to improve food security in the face of increasing agrobiodiversity loss, human population growth and climate change. Each chapter draws on examples from the literature or the authors' research and includes further reading references. Containing other useful features such as a glossary, it is invaluable for professionals and undergraduate and graduate students in plant sciences, ecology, conservation, genetics and natural resource management.

Written by a team of international experts, this book provides a comprehensive overview of the major applications of airborne and terrestrial laser scanning. It focuses on principles and methods and presents an integrated treatment of airborne and terrestrial laser scanning technology. After consideration of the technology and processing methods, the book turns to applications, such as engineering, forestry, cultural heritage, extraction of 3D building models, and mobile mapping. This book brings together the various facets of the subject in a coherent text that will be relevant for advanced students, academics and practitioners.

Yale University Press  
In this new addition to the Reformation Commentary on Scripture, we read along as the Reformers return to the ancient stories of the six days of creation, the tragic fall of God's creature and the catastrophe of the flood and apply them to the tumultuous age of the Reformation. Here is a

primary source for biblical renewal in the church today.

**The Long, Long Life of Trees** CRC Press

This examination of the role of agriculture and food in the new international division of labor argues that the globalized economy creates new winners and losers.

Repertorio generale annuale della

Giurisprudenza italiana

BoD - Books on Demand  
Restorative gardens for the sick, which were a vital part of the healing process from the Middle Ages to the early twentieth century, provided ordered and beautiful settings in which patients could begin to heal, both physically and mentally. In this engaging book, a landscape architect, a physician, and a historian examine the history and role of restorative gardens to show why it is important to again integrate nature into the institutional--and largely factorylike--settings of modern health care facilities. In this unique book, Nancy Gerlach-Spriggs, Dr. Richard Enoch Kaufman, and Sam Bass Warner, Jr., unfold their argument by presenting the history of restorative gardens and

studies of six American health care centers that cherish the role of their gardens in the therapeutic process. These institutions are examined in detail: community hospitals in Wausau, Wisconsin, and Monterey, California; a full-care mental institution in Philadelphia; a nursing home in Queens; a facility for rehabilitative medicine in New York City; and a hospice in Houston. In their comprehensive review the authors suggest that contemporary scientific understanding clearly recognizes the beneficial physiological effects of garden environments on patients' well-being. The book ends with a plea to make gardens--rather than the shopping mall atria so often seen in newly renovated hospitals--a vital part of the medical milieu.

**Genesis 1-11** BRILL  
 This standard textbook provides a comprehensive and up-to-date overview of the direct and indirect impacts of air pollution on plant life. Written by an international team of experts, the book covers the main historical aspects and sources of pollutants, atmospheric transport and transformations of pollutants, and issues of global change and the use of science in air pollution policy formulation. \* covers all the main phytotoxic pollutants with due consideration given to impacts at all levels of plant organisation from molecular to ecological. \* emphasises the effects of air pollutants in altering plant response to common stresses, both abiotic and biotic - fields in which considerable progress has been made since publication of the first edition. \* includes coverage of how research leads to pollution control policy development. Essential reading for students in Environmental Science, Biological Science and Agriculture, as well as environmental consultants and professionals involved in

air quality research and the application of air quality guidelines and advice.

*Meccanizzazione agricola*  
 Cambridge University Press  
 "The innocence of childhood collides with the stark aftermath of war in this wrenching and ultimately redemptive tale of family, seemingly impossible choices, and the winding paths to destiny, which sometimes take us to places far beyond our imaginings." - Lisa Wingate, #1 New York Times Bestselling Author of *Before We Were Yours* and *The Book of Lost Friends* "Ardone's beautifully crafted story explores the meaning of identity and belonging...recommended to fans of Elena Ferrante's Neapolitan novels." - The Library Journal "[The Children's Train] leaves you with a great sense of the importance of family and the tough decisions that must be faced as a result of that love." - Shelf Awareness Based on true events, a heartbreaking story of love, family, hope, and survival set in post-World War II Italy—written with the heart of *Orphan Train* and *Before We Were Yours*—about poor children from the south

sent to live with families in the north to survive deprivation and the harsh winters. Though Mussolini and the fascists have been defeated, the war has devastated Italy, especially the south. Seven-year-old Amerigo lives with his mother Antonietta in Naples, surviving on odd jobs and his wits like the rest of the poor in his neighborhood. But one day, Amerigo learns that a train will take him away from the rubble-strewn streets of the city to spend the winter with a family in the north, where he will be safe and have warm clothes and food to eat. Together with thousands of other southern children, Amerigo will cross the entire peninsula to a new life. Through his curious, innocent eyes, we see a nation rising from the ashes of war, reborn. As he comes to enjoy his new surroundings and the

possibilities for a better future, Amerigo will make the heartbreaking choice to leave his mother and become a member of his adoptive family.

Amerigo's journey is a moving story of memory, indelible bonds, artistry, and self-exploration, and a soaring examination of what family can truly mean. Ultimately Amerigo comes to understand that sometimes we must give up everything, even a mother's love, to find our destiny. Translated from the Italian by Clarissa Botsford

**Art in Nature** Cambridge University Press

Tropospheric ozone is a regionally distributed air pollutant that adversely affects both humans and vegetation. Surface-Level Ozone Exposures and Their Effects on Vegetation focuses on the formation, distribution, and transport of surface-level ozone; the

characterization of its exposures; the mechanisms and processes involved in its deposition and uptake by plants; and its effects on the growth of crops and forest trees. State-of-the-art information is presented and the methodology for studying its effects on vegetation is critically reviewed. This background material leads to a discussion of the approaches for developing an air quality standard that will provide protection from the adverse effects of ozone, as well as suggestions for future research directions. Researchers and professionals in the utility industry, oil industry, and government environmental agencies; university instructors; and students will find that this book is filled with information that can be used on a daily basis in their work and studies.
