Written for all types of  
ITA programs an  
independent study  
course, a brief  
workshop, or extensive  
training this versatile  
text provides essential

information for ITAs to  
develop strong  
teaching skills that  
ensure effective  
communication in the  
undergraduate  
classroom. The authors  
take the perspective  
that incoming ITAs are  
responsible for their  
own learning and  
teaching style. Each of  
the texts ten units  
includes work on  
English proficiency,  
teaching skills, and  
cultural awareness.  
Each unit centers  
around a common  
rhetorical teaching task  
in U.S. university  
classrooms:  
introducing oneself,  
introducing a syllabus,  
explaining a visual,  
defining a term,  
teaching a process,  
fielding questions,  
explaining complex  
topics at a basic level,  
presenting information  
over several class

periods, and leading a discussion.

Undergraduate textbook materials for fifteen academic fields are included in the appendix to provide ITAs with content relevant for practicing teaching and language skills. Because ITA programs vary in structure and number of training hours, the authors include a To the Instructor section, which is full of recommendations for the many ways the text can be used.

Prentice Hall Chemistry  
meets the needs of  
students with a range  
of abilities, diversities,  
and learning styles by  
providing real-world  
connections to  
chemical concepts and

processes. The first nine chapters introduce students to the conceptual nature of chemistry before they encounter the more rigorous mathematical models and concepts in later chapters. The technology backbone of the program is the widely praised Interactive Textbook with ChemASAP!, which provides frequent opportunities to practice and reinforce key concepts with tutorials that bring chemistry to students through: Animations, Simulations, Assessment, and Problem-solving tutorials.

Prentice Hall  
Part of a building systems design

workbook series covering everything from HVAC to plumbing, this comprehensive guide teaches the basic principles and concepts of lighting and its sources, and includes numerous application problems for "hands-on" learning. Provides a thorough introduction to lighting, and covers all standard design procedures. Divides material into two parts: the first presents three unconventional and creative sample problems for each new concept discussed using common formulas and criteria (the first problem is worked out entirely, the second is guided practice, and the third is unsolved; solutions to all problems are provided); the second part of the book

contains multiple word application problems that mirror real-life scenarios. IES schedules, lighting charts and tables are included, and users also receive companion design software written in BASIC (LightSizer version 1.0) that gives them a practical training tool for planning and designing fluorescent and incandescent lighting fixtures for interior use. For professional in drafting, engineering, and civil/construction technology.
