This international two-day conference is now firmly established as Europe's premier meeting place for the thermoplastics elastomers sector. The last three events which were held in London, Amsterdam and Brussels each brought together more than 200 key players involved in all stages of the TPEs supply chain. The TPE 2002 conference, held in Brussels on the 24th and 25th of June 2002, featured expert presentations on key market trends, new application developments and the very latest material innovations.

Now in its seventh year, this international two-day conference is firmly established as Europe's premier event for the thermoplastic elastomers industry. The TPE 2004 conference programme discussed technical developments and featured expert presentations on key market trends, new application developments and the very latest material innovations.

The study of human body measurements on a comparative basis is known as anthropometrics. Its applicability to the design process is seen in the

physical fit, or interface, between the human body and the various components of interior space. Human Dimension and Interior Space is the first major anthropometrically based reference book of design standards for use by all those involved with the physical planning and detailing of interiors, including interior designers, architects, furniture designers, builders, industrial designers, and students of design. The use of anthropometric data, although no substitute for good design or sound professional judgment should be viewed as one of the many tools required in the design process. This comprehensive overview of anthropometrics consists of three parts. The first part deals with the theory and application of anthropometrics and includes a special section dealing with physically disabled and elderly people. It provides the designer with the fundamentals of anthropometrics and a basic understanding of how interior design standards are established. The second part contains easy-to-read, illustrated anthropometric tables, which provide the most current data available on human body size, organized by age and percentile groupings. Also included is data relative to the range of joint motion and body sizes of children. The third part contains hundreds of dimensioned drawings, illustrating in plan and section the proper anthropometrically based relationship between user and space. The types of spaces range from residential and commercial to recreational and institutional, and all dimensions include metric conversions. In the Epilogue, the authors challenge the interior design profession, the building industry, and the furniture manufacturer to seriously explore the problem of adjustability in design. They expose the fallacy of designing to accommodate the so-called average man, who, in fact, does not exist. Using government data, including studies prepared by Dr. Howard Stoudt, Dr. Albert Damon, and Dr. Ross McFarland, formerly of the Harvard School of Public Health, and Jean Roberts of the U.S. Public Health Service, Panero and

Zelnik have devised a system of interior design reference standards, easily understood through a series of charts and situation drawings. With Human Dimension and Interior Space, these standards are now accessible to all designers of interior environments.

Surveying recent developments in coating polymers and plastics in the automotive industry, this book examines proper materials selection, basic processing mechanics, process selection based on cost and coating mechanics, molding, and performance and durability assessments. Techniques for salvaging plastics from used vehicles are highlighted, and North American and European techniques for coating plastics in the automotive industry are compared. The editors are members of the Federation of Societies for Coatings Technology. Annotation (c)2003 Book News, Inc., Portland, OR (booknews.com).

The high-level language of R is recognized as one of the most powerful and flexible statistical software environments, and is rapidly becoming the standard setting for quantitative analysis, statistics and graphics. R provides free access to unrivalled coverage and cutting-edge applications, enabling the user to apply numerous statistical methods ranging from simple regression to time series or multivariate analysis. Building on the success of the author's bestselling *Statistics: An Introduction using R*, *The R Book* is packed with worked examples, providing an all inclusive guide to R, ideal for novice and more accomplished users alike. The book assumes no background in statistics or computing and introduces the advantages of the R environment, detailing its applications in a wide range of disciplines. Provides the first comprehensive reference manual for the R language, including practical guidance and full coverage of the graphics facilities. Introduces all the statistical models covered by R, beginning with simple classical tests such as chi-square and t-test. Proceeds to examine more advanced methods, from regression and analysis of variance, through to generalized linear models, generalized mixed models, time series, spatial statistics, multivariate statistics and much more. *The R Book* is aimed at undergraduates, postgraduates and professionals in science, engineering and medicine. It is also ideal for students and professionals in statistics, economics, geography and the social sciences.

*Plunkett's Chemicals, Coatings & Plastics Industry Almanac: Chemicals, Coatings & Plastics Industry Market Research, Statistics, Trends & Leading*

*Comp* iSmithers Rapra Publishing

The chemicals manufacturing industry is a vibrant, global business that encompasses many important sectors: from commodity chemicals, to

specialty chemicals to custom manufacturing. Key products include biochemicals, nanochemicals, polymers, petrochemicals, fertilizers, plastics, coatings, ceramics, solvents, additives, dyes and many other products basic to home and business needs. In addition, the pharmaceuticals industry is often included when discussing chemicals. Plunkett's Chemicals, Plastics & Coatings Industry Almanac 2008 covers such sectors, providing a market research tool for competitive intelligence, strategic planning, business analysis and even employment searches. Our coverage includes business trends analysis and industry statistics. The almanac also contains a chemicals, plastics and coatings business glossary and a listing of industry contacts, such as industry associations and government agencies. Next, we profile hundreds of leading companies. Our 400 company profiles include complete business descriptions and up to 27 executives by name and title. A CD-ROM accompanies the book version and enables you to search, filter, view and export selected companies and organizations -- a handy tool for creating mailing lists.

*Canada Lumberman and Woodworker* Keith Martin

Market research guide to the chemicals, coatings and plastics industry ? a tool for strategic planning, employment searches or financial research.

Contains trends analysis, statistical tables, and an industry glossary. Includes one page profiles of 400 leading chemicals, coatings and plastics industry firms ? includes addresses, phone numbers, executive names.
