Psychology & Christianity Macmillan Higher Education

How are Christians to understand and undertake the discipline of psychology? This question has been of keen interest (and sometimes concern) to Christians because of the importance we place on a correct understanding of human nature. Psychology can sometimes seem disconnected from, if not antithetical to, Christian perspectives on life. How are we to understand our Christian beliefs about persons in relation to secular psychological beliefs? This revised edition of a widely appreciated text now presents five models for understanding the relationship between psychology and Christianity. All the essays and responses have been reworked and updated with some new contributors including the addition of a new perspective, the transformative view from John Coe and Todd Hall (Biola University). Also found here is David Powlison (Westminster Theological Seminary) who offers the biblical counseling model. The levels-of-explanation model is advanced by David G. Myers (Hope College), while Stanton L. Jones (Wheaton College) offers an entirely new chapter presenting the integration model. The Christian psychology model is put forth by Robert C. Roberts (Baylor University) now joined by Paul J. Watson (University of Tennessee, Chattanooga). Each of the contributors responds to the other essayists, noting points of agreement as well as problems

they see. Eric L. Johnson provides a revised introduction that describes the history of Christians and psychology, as well as a conclusion that considers what might unite the five views and how a reader might evaluate the relative strengths and weaknesses of each view. *Psychology and Christianity: Five Views* has become a standard introductory textbook for students and professors of Christian psychology. This revision promises to keep it so.

By the teaching of great literature, philosophy, and science, liberal arts education seeks to expand our awareness and to liberate us from the confines of the present. And with close-up looks at how the game is played--at the varied research tools that reveal the workings of our social nature--we hope to enable students to think smarter"--

The success of the modular version of David Myers's bestselling brief text, Exploring Psychology, proves the author's longheld belief (supported by independent research) that for a number of students, a text comprised of 45 15-page chapters is more effective than one of 15 45-page chapters. Exploring Psychology, Sixth Edition, in Modules includes all the features and up-to-date

content of the current edition of Exploring Psychology organized into 45 modules. It is accompanied by its own expansive variety of media and supplements similar to the Exploring Psychology package, also reorganized to match the modular format. Focusing on experimental methods, authors Anne Myers and Christine Hansen lead students step by step through the entire research process, from generating testable hypotheses to writing the research report. The major sections of the book parallel the major sections of a research report (Introduction, Method, Results, and Discussion), giving students the skills they'll need to design and conduct an experiment, analyze and interpret the research findings, and report those findings. Although the main focus is on experimentation, alternative approaches are discussed as important complements.
