Laboratories – NUS Mechanical Engineering Mechanical Engineering System DynamicsThis course is an introduction to the dynamics and vibrations of lumped-parameter models of mechanical systems. Topics covered include kinematics, force-momentum formulation for systems of particles and rigid bodies in planar motion, work-energy concepts, virtual displacements and virtual work. Students will also become familiar with the following topics: Lagrange's equations for systems of ...Engineering Dynamics | Mechanical Engineering | MIT ...System Dynamics for Engineering Students: Concepts and Applications discusses the basic concepts of engineering system dynamics.
