QuizletChapter r 11

Introduction to
Genetics.
process in
which the
number of
chromosomes
per cell is cut
in half through
the separation
of homologous
chromosomes
in a diploid
cell.

Chapter 11
Introduction to
Genetics. -
Mendel
assumed that
a dominant
allele had
masked the

corresponding
recessive
allele in the F1
generation. -
At some point,
the allele for
shortness was
segregated, or
separated,
from the allele
for
tallness.

Quizlet
Genetics
and
Probability.
Probability.
is the likelihood
that an event
will occur.
Scientists use
probability to
predict the
outcomes of
genetic

crosses. If a coin is flipped once, the chance that it will be heads is $1/2$. If it is flipped three times in a row, the probability of flipping all heads is? $1/2 \times 1/2 \times 1/2 =$ _____

11.1 The work of Gregor Mendel. Mendel discovered the basic principles of heredity. By breeding

garden peas in carefully planned experiments. Why do you think Mendel chose to work with pea plants? Because they are available in many varieties. Reproduce fast, and . Because he could strictly control which plants mated with which

Chapter 11 Introduction to Genetics - Biology

Introduction to genetics (chapter 11) Genetic information passes from parent to offspring

during meiosis when gametes, each containing one representative from each chromosome pair, unite.
