PMI's latest foundational standard, The Standard for Organizational Project Management (OPM), expands upon the popular Implementing
 Organizational Project Management: A Practice Guide, published in 2014. This newly-created standard is a result of survey feedback that revealed
 acceptance of the approach and increasing interest in an expanded version. OPM is defined as the integration of people, knowledge, and processes,
 supported by tools across all functional domains of the organization. The approach further advances an organization's performance by developing and
 linking portfolio, program, and project management principles and practices with organizational enablers (e.g., structural, cultural, technological, and
 human resource practices) and business processes to support strategic objectives. OPM helps organizations deliver value through the following
 principles: Aligning strategy Consistent execution and delivery Cross-functional collaboration Adding value to the organization Continuous training
 Although useful for any organization that is seeking to better meet its strategic objectives, this standard is particularly beneficial for organizations
 that do not have a unified project management approach.

Q & As for the PMBOK Guide PMP Master Prep

The Stakeholder Perspective places people at the center of both projects and project management. It gives to the project management community a helpful, innovative, stakeholder-centered approach to increase projects' delivered value and success rate. It presents a logical model also called the "Stakeholder Perspective," which acts as the reference point in a structured path to effectiveness. Starting from the analysis of a project's

stakeholders, the model integrates both rational and relational innovative approaches. Its continuous focus on stakeholder requirements and expectations helps to set a proper path, and to maintain it, in order to target success and to achieve goals in a variety of projects with different size and complexity. The book presents a set of innovative and immediately applicable techniques for effective stakeholder identification and classification, as well as analysis of stakeholder requirements and expectations, key stakeholders management, stakeholder network management, and, more generally, stakeholder relationship management. The proposed stakeholder classification model consists of just four communities, each one based on the commonality of main interests and behavior. This model features an accurate and stable identification process to increase effective communication and drastic reduce relationship complexity. A systemic approach is proposed to analyze both stakeholder requirements and expectations. The approach aids in detecting otherwise unclear stakeholder requirements and/or hidden stakeholder expectations. An interactive communication model is presented along with its individual and organizational frames of reference. Also presented are relevant cues to maximize effective and purposeful communication with key stakeholders as well as with the stakeholder network. The importance of satisfying not only the project requirements but also the stakeholder expectations is demonstrated to be the critical success factor in all projects. An innovative approach based on the perceived value and key performance indicators shows how to manage different levels of project complexity. The book also defines a complete structured path to relationship effectiveness called "Relationship Management Project," which can be tailored to enhance stakeholder and communication management processes in each one of the project management process groups (i.e. initiating, planning, executing, monitoring and controlling, and closing). The book concludes with a look ahead at Project Management X.0 and the stakeholder-centered evolution of both project and portfolio management.
