*WB8NUT - Digital Mode Software Review* Ham Radio Digital Modes DominoEX is a digital mode using MFSK (Multi-Frequency Shift Keying), used to send data (for example, hand-typed text) by radio. MFSK sends data using many different tones, sent one at a time. Each tone element ('symbol') can carry several bits of data. Most other digital modes uses each tone to represent only one bit. WB8NUT - Digital Modes Information Page MT63 is a digital radio modulation mode for transmission in high-noise situations developed by Pawel Jalocho SP9VRC. MT63 is designed for keyboard-to-keyboard conversation modes, on HF HAM bands. Ham Radio Digital Modes Software List and Descriptions These days, virtually all RTTY is done by the computer/soundcard combination. Amateurs (hams) use 45 baud (the speed) with 170Hz shift (between mark and space). Commercial stations use 50 or 100 baud with shifts of 425 or even 850Hz. Most software caters for differing speeds and shifts. Unlike most digital modes, RTTY is transmitted on LSB. Digital Modes - hfradio.org.uk Ham Radio Digital Modes Digital modes of transmission are forming an increasingly important element of amateur radio.
