A black belt means strength, speed, flexibility, quickness and power. Business Black Belt draws from the martial arts to offer hard-won advice for building and running a business today. It is unlike anything you've read before. In fact, very few people have ever addressed these business topics at all. Business Black Belt introduces real-world situations you will face while building your business. Seventy short chapters cover crucial topics--your attitude, managing, marketing, selling, employees, money, MBAs, lawyers, consultants, and investors--and show you how to use the mental discipline of a karate master to skillfully build your business. Business Black Belt is packed full of the potent lessons Burke learned during the past three decades working with expert consultants, entrepreneurs, and business owners.

Fifty previous Torkiyen missions were obliterated in space, but new technology gives Mission 51 a better chance to reach the legendary planet Cerulea—also known as planet Earth. Zeemat, a peaceful Torkiyen who'd rather hold a paintbrush than a weapon, has been assigned to his planet's fifty-first mission against his own will. After suffering a catastrophic journey, Zeemat's spacecraft crashes in what becomes known as Area 51. Taken captive by a rather brutal cohort of FBI agents, he finds a friend only in his gentle and kind translator, Dr. Linda Deltare. As the FBI torture grows increasingly merciless, Zeemat must find a way to escape his holding cell or perish, never to see the outside world he traveled so far to see. In his quest for freedom and happiness, Zeemat must learn to survive in a strange new land and fight against militant forces from both his native and adopted planets.

Designed in 1948 by the brilliant Walter Beech, the T-34 Mentor was intended as a low cost replacement for the T-6/NJ Texan. The aircraft bore many similarities to the Beechcraft Bonanza, but had a two-seat cockpit with bubble canopy, and a conventional tail. The original T-34s were equipped with a piston engine. Fifteen years after production ceased, the design was upgraded and deliveries began of a turbo-prop equipped T-34C Turbo-Mentor, which remained in production until 1990. The T-34 is one of the most reliable aircraft of its type with many remaining in service today, six decades after it was first produced. Over 2300 Mentors in various versions were produced worldwide, including the T-34A for the Air Force and the T-34B variant for the U.S. Navy.

Please note: This ebook edition does not include the photo insert from the print edition. The widely anticipated memoir of legendary ace American fighter pilot, Robin Olds Robin Olds was a larger-than-life hero with a towering personality. A graduate of West Point and an inductee in the National College Football Hall of Fame for his All-American performance for Army, Olds was one of the toughest college football players at the time. In WWII, Olds quickly became a top fighter pilot and squadron commander by the age of 22—and an ace with 12 aerial victories. But it was in Vietnam where the man became a legend. He arrived in 1966 to find a dejected group of pilots and motivated them by placing himself on the flight schedule under officers junior to himself, then challenging them to train him properly because he would soon be leading them. Proving he wasn't a WWII retread, he led the wing with aggressiveness, scoring another four confirmed kills, becoming a rare triple ace. Olds (who retired a brigadier general and died in 2007) was a unique individual whose personal story is one of the most eagerly anticipated military books of the year.

Designed as a stopgap measure to provide overhead reconnaissance capability during the early years of the Cold War, the versatile U-2 has since evolved to meet changing requirements well into

the 21st century. Though many authors have documented the airplane's operational history, few have made more than a cursory examination of its technical aspects or its role as a NASA research platform. This volume includes an overview of the origin and development of the Lockheed U-2 family of aircraft with early National Advisory Committee for Aeronautics (NACA) and National Aeronautics and Space Administration (NASA) involvement, construction and materials challenges faced by designers and builders, releasable performance characteristics and capabilities, use of U-2 and ER-2 airplanes as research platforms, and technical and programmatic lessons learned.
