Spine-related pain is the world's leading disabling condition, affecting every population and a frequent reason for seeking medical consultation and obtaining imaging studies. Numerous spinal phenotypes (observations/traits) and their respective measurements performed on various spine imaging have been shown to directly correlate and predict clinical outcomes. *Atlas of Spinal Imaging Phenotypes: Classifications and Radiographic Measurements* is a comprehensive visual resource that highlights various spinal phenotypes on imaging, describes their clinical and pathophysiological relevance, and discusses and illustrates their respective measurement techniques and classifications. Helps readers better understanding spinal phenotypes and their imaging, and how today's knowledge will facilitate new targeted drug discovery, novel diagnostics and biomarker discovery, and outcome predictions. Features step-by-step instructions on performing the radiographic measurements with examples of normal and pathologic images to demonstrate the various presentations. Presents clinical correlation of the phenotypes as well as the radiographic measurements with landmark references. Includes validated classification systems that complement the phenotypes and radiographic measurements. Complies the knowledge and expertise of Dr. Dino Samartzis, the preeminent global authority on spinal phenotypes who has discovered and proposed new phenotypes and classification schemes; Dr. Howard S. An, a leading expert in patient management and at the forefront of 3D imaging of various spinal phenotypes; and Dr. Philip Louie, a prolific surgeon who is involved in one of the largest machine learning initiatives of spinal phenotyping.

CURRENT Medical Diagnosis and Treatment 2017 McGraw Hill Professional

A look at the emotional side of medicine—the shame, fear, anger, anxiety, empathy, and even love that affect patient care Physicians are assumed to be objective, rational beings, easily able to detach as they guide patients and families through some of life's most challenging moments. But doctors' emotional responses to the life-and-death dramas of everyday practice have a profound impact on medical care. And while much has been written about the minds and methods of the medical professionals who save our lives, precious little has been said about their emotions. In *What Doctors Feel*, Dr. Danielle Ofri has taken on the task of dissecting the hidden emotional responses of doctors, and how these directly influence patients. How do the

stresses of medical life—from paperwork to grueling hours to lawsuits to facing death—affect the medical care that doctors can offer their patients? Digging deep into the lives of doctors, Ofri examines the daunting range of emotions—shame, anger, empathy, frustration, hope, pride, occasionally despair, and sometimes even love—that permeate the contemporary doctor-patient connection. Drawing on scientific studies, including some surprising research, Dr. Danielle Ofri offers up an unflinching look at the impact of emotions on health care. With her renowned eye for dramatic detail, Dr. Ofri takes us into the swirling heart of patient care, telling stories of caregivers caught up and occasionally torn down by the whirlwind life of doctoring. She admits to the humiliation of an error that nearly killed one of her

patients and her forever fear of making another. She mourns when a beloved patient is denied a heart transplant. She tells the riveting stories of an intern traumatized when she is forced to let a newborn die in her arms, and of a doctor whose daily glass of wine to handle the frustrations of the ER escalates into a destructive addiction. But doctors don't only feel fear, grief, and frustration. Ofri also reveals that doctors tell bad jokes about "toxic sock syndrome," cope through gallows humor, find hope in impossible situations, and surrender to ecstatic happiness when they triumph over illness. The stories here reveal the undeniable truth that emotions have a distinct effect on how doctors care for their patients. For both clinicians and patients, understanding what doctors feel can make all the difference in giving and getting the best medical care.
