(a) To calculate probability, we first need
to have the PDF of S. As a linear
combination of three normal variables, S
itself is normal, with parameters $\mu_S =$
 $0.3 \times 5 + 0.2 \times 8 + 0.1 \times 7 = 3.8$ (cm) $\sigma_S =$
 $0.3212 + 0.2222 + 0.1212 \cong 0.51$ (cm)
Hence $P(S > 4\text{cm}) = 1 - \Phi\left(\frac{4 - 3.8}{0.51}\right)$
 $= 1 - \Phi(0.3922) = 1 - 0.6526 \cong 0.347$
