Theoretical Models of Counseling and Psychotherapy Springer Nature

Introduction to Counseling by Michael Scott Nystul provides an overview of counseling and the helping professions from the perspective of art and science—the science of counseling that generates a knowledge base proven to promote competency and efficacy in the practitioner, and the art of using this knowledge base to build skills that can be applied sensitively to clients in a multicultural society. The Fifth Edition has been organized into three sections: (1) an overview of counseling and the counseling process, (2) multicultural counseling and counseling theories, and (3) special approaches and settings. It continues to address key topics and issues, including gender, culture, and sexual orientation, and offers ways to integrate multiculturalism into all aspects of counseling, rather than view it as a separate entity. Highlighting emerging trends and changes in ethical codes, as well as reflecting the latest updates to the Diagnostic Statistical Manual (DSM-5), the book successfully illustrates the importance of art and science to modern-day counseling.

Suicide Assessment and Treatment Planning John Wiley & Sons

This practical guide provides a holistic, wellness-oriented approach to understanding suicide and working effectively with clients who are suicidal. John and Rita Sommers-Flanagans' culturally sensitive, seven-dimension model offers new ways to collaboratively integrate solution-focused and strengths-based strategies into clinical interactions and treatment planning with children, adolescents, and adults. Each chapter contains diverse case studies and key practitioner guidance points to deepen learning in addition to a wellness practice intervention to elevate mood. Personal and professional self-care and emotional preparation techniques are emphasized, as are ethical issues, counselor competencies, and clinically nuanced skill building. *Requests for digital versions from ACA can be found on www.wiley.com. *To purchase print copies, please visit the ACA website *Reproduction requests for material from books published by ACA should be directed to permissions@counseling.org.

Traditional counselling is an under-researched field, with inadequate scholarly documentation on the approaches, procedures and process outcomes that should motivate researchers, counselling psychologists and educationists to tap from the abundant uncharted waters. This book represents a major step towards narrowing these gaps. Its main contribution is the articulation of a theoretical framework of traditional counselling, the delineation of traditional counselling approaches and processes, and the clarification of the scope of problems apparent in the sphere of traditional counselling. Traditional counselling is rooted in traditional systems of knowledge and sociocultural values, customs and practices, is essentially community-based and multicultural in nature, and promotes a collective inclination to problem identification, resolution and management. This underscores the importance, relevance and usefulness of traditional counselling from an African perspective. The book is a thought-provoking investigation on counselling models.

Systems Theories for Psychotherapists explores three key theories that underpin many of the models of psychotherapy: general systems theory, natural systems theory, and language systems theory. The book presents the aesthetics (how to see and understand what is happening) and the pragmatics (what to do in the therapy room) behind each theory. It also explores how therapists can successfully conceptualize the problems that clients bring to therapy, offering a range of contemporary examples to show how each theory can be applied to practice. Starting with an introduction to systems theories, the book then delves into cybernetics, interactional systems, natural systems, constructivist theory, and social construction theory. Each chapter uses a distinctive case example to help clinicians to better understand and apply the theories to their own therapeutic setting. Woven throughout the book are three helpful learning tools: "Applying Your Knowledge," "Key Figure," and "Questions for Reflection," providing the reader with the opportunity to critically engage with each concept, consider how their own world view and preconceptions can inform their work with clients, and challenging them to apply prominent systems theories to their own practice. *Systems Theories for Psychotherapists* is a clear and valuable text for undergraduate and graduate students in mental health programs, including counseling, marriage and family therapy, social work and clinical psychology, as well as for all practicing clinicians.

This volume applies critical social theories to family therapy practice, using sociopolitical context for a clearer focus on the power dynamics of couple and family relationships. Its decolonizing approach to therapy is shown countering the pervasive cultural themes that grant privilege to specific groups over others, feeding unequal and oppressive relationships that bring families and couples to treatment. Therapy is shown here as a layered and nuanced process, with practitioners developing an ethical human rights perspective toward their work as they aid clients in negotiating for greater justice and equity in their relationships. The book bridges theory and practice by giving readers these essential tools: Strategies for asking clients about social class. A framework for understanding gender issues within the larger patriarchy. Guidelines for relating concepts of race and class in therapy. Structure for creating the family cartography. Ways to utilize a queer perspective in therapy. Illustrative case examples throughout. Breaking new ground in family therapy, *Applying Critical Social Theories to Family Therapy Practice* challenges social workers, social work researchers, therapists, and psychologists to push beyond current ideas of social awareness and cultural competence toward truly liberatory client-centered practice. .
